| 36. | <p>Projected Incident Activity, Potential, Movement, Escalation, or Spread and influencing factors during the next operational period and in 12-, 24-, 48-, and 72-hour time frames:</p> |
| 12 hours: | <p>Moderate fire behavior with moderate intensity near the DIV B/C break northwest of Cotton Ridge, east of Trail Canyon, and along Third Fork Rock Creek that has the potential to impact Wildland Urban Interface and Magic Mountain Ski Resort in the next 72+ hrs as temperatures begin to rise and relative humidity fall. Areas of isolated interior heat remains south of Cotton Ridge and in the Telephone Canyon area of DIVs B and C. Pockets of isolated heat throughout the southern half of the fire's footprint. Strong winds and the lack of a wetting rain will continue to pose a threat of increased fire activity and spread in areas where isolated heat is near containment lines.</p> |
| 24 hours: | <p>The passing dry cold front will continue to generate west to northwest winds 10-20 mph with gusts to 30 mph. While favorable wind directions for DIV B, terrain influence can create unpredictable wind conditions with varying aspects, elevations, and canyons.</p> |
| 48 hours: | <p>Post frontal northwest winds will continue to create conditions that could potentially impact areas where residual heat and any unburned fuel remains near the fire perimeter.</p> |
| 72 hours: | <p>Strong high pressure ridge will develop with high temperatures in higher elevations and 80s in lower elevations. Temps 10-15 degrees above normal. RHs will return to the teens toward the end of the week. Extremely dry fuels and no precipitation expected.</p> |
| <p>Anticipated after 72 hours: Same As Above</p> | |
