\*\*\*Red Flag Warning In Effect For Today From Noon Until 2000\*\*\*

Weather: Mostly cloudy (60% cloud cover) this morning becoming partly cloudy (30% cloud cover) this afternoon.

Max Temp: 57-61° Min RH: 18-23% Winds (20 foot):

### FIRE BEHAVIOR

### GENERAL

The fire is burning primarily through mixed conifer stands with a shrub understory and timber/broadleaf stands with a litter understory. Many of these stands have an extremely high mortality rate with a 50% or more standing snag component.

Energy Release Component for the Ashley FDRA for 10/09 is 90, a record value for the date, and above the 97<sup>th</sup> percentile.

### SPECIFIC FIRE BEHAVIOR

Mixed conifer stands with shrub understory: potential head rate of spread 10-20 chains/hour with flame length 6-10 feet **except** during wind gusts which could result in spread rates to 40 chains/hour with flame length exceeding 15 feet. Expect single and group tree torching; and the potential for active crown fire in the afternoon but confined primarily to the interior. Maximum spotting distance ½ - 1 mile, Probability of Ignition 70%. **Nighttime:** expect daytime burning conditions to persist well into the evening. Late expect backing/flanking spread to 2-5 chains per hour, torching and short-range spotting due to extremely dry conditions. Probability of Ignition 30-40%.

Timber/Broadleaf litter stands: rate of spread 4-6 chains per hour, flame length 2-3 feet.

Critical areas of concern:

Stillwater Reservoir area: fire will continue to spread toward the reservoir and dam and also westerly/ northerly In the Grandaddy Basin.

Hells Canyon area: potential for spotting and becoming established on the east side of Hells Canyon.

### **AIR OPERATIONS**

Air operations may be impacted afternoon winds and by smoke in various locations during the day.

Sunrise: Saturday, 10/10 07:27

Sunset: Saturday, 10/10 18:48

Sunrise: Sunday, 10/11 07:28

### SAFETY

There is a potential for extreme fire behavior today with active crown fire and long-range spotting. Although this will most likely be confined to interior portions of the fire pay attention to condition in your assigned work area. Assistance to deal with new ignitions may result in the use of East Fork fire resources.

### **EAST FORK FIRE**

Operation Period: 10/10-11/2020 Day/Night

### **SAFETY MESSAGE**

### YOUR SAFETY IS DEPENDENT UPON YOUR ABILITY TO:

- FORECAST the future and how it will affect your safety.
- **PREDICT** fire behavior, and how the weather and terrain will influence it.
- ANTICIPATE problems and needs, finding solutions in advance.
- **RECOGNIZE** hazards and minimize risk exposure.

Please try and operate in a proactive mode, not a reactionary mode!

### MAJOR HAZARDS AND RISKS

STEEP TERRAIN
WILDLIFE/LIVESTOCK
FATIGUE

ROLLING MATERIAL DROUGHT CONDITIONS **DRIVING** 

HEAVY EQUIPMENT
HAZARD TREES
COMPLACENCY

Be sure all elements of your safety plan are in place prior to engagement

### Look Up, Look Down, Look Around During Mop Up

\*Look Up: Check the sky for any weather changes such as building or approaching thunderstorms, wind shifts or increasing in speed. Watch for air operations and water drops. Look for snags and the potential for rolling material.

- \*Look Down: Watch your footing. Keep an eye out for snakes, bee's nests, Stump holes, and ash pits.
- \* Look Around Check for flagging identifying hazards in the area, and general terrain features. Keep an eye on fellow firefighters for signs of heat stress and fatigue.

### **Aircraft Safety**

- \*Ensure personnel out of the drop zone.
- \*Use correct air to ground frequency to communicate with aircraft.
- \*Use the clock position of the aircraft to help coordinate target location.
  - \*Use clear concise statements when communicating with the aircraft.
  - \*Provide feedback on drop accuracy.
