Management Objectives

- Provide for firefighter and public safety through utilization of risk-informed strategies and tactics that yield the highest probability of success.
- Follow all COVID-19 guidelines specified by the Leaders Intent and Delegation of Authority, utilizing NWCG standards in operations. Implement measures to reduce exposure and transmission among fire personnel and the public.
- Use available resources and tactics to contain fire spread and minimize unwanted fire effects to natural and cultural resources.
- Ensure prompt and accurate communications with hosting agency, stakeholders and the public.
- Prepare for the efficient transition of the East Fork Fire to the Nevada Team 3.

Control Objectives

- Protect identified values at risk from unwanted fire impacts.
- Provide for structure protection as fire moves into developed areas.
- Keep fire within containment lines where they exist, while identifying and developing contingencies lines.
- Identify and initiate suppression repair operations where practical.
- Thoughtfully engage in suppression actions that allow for an efficient and effective transition to the next management organization.

General Situational Awareness:

- Steep and rugged terrain, critically dry and receptive fuel beds, active area for fire history and drought stressed trees.
- In the COVID-19 environment, high density populations or large groups are particularly at risk. To help protect yourself, your family and to ensure all employees return home safely, make sure to practice social distancing.
- Enhanced hygiene (especially handwashing), PPE & monitoring practices help limit the infection rate of first responders.

Inputs

Weather Summary: *****See attached Fire Weather Forecast*******Discussion: HIGH WINDS.** Another wind event today into tonight as a disturbance rips across Wyoming.**Weather:** Mostly sunny (20% opaque cloud cover) and **WINDY****Max Temp:** 47-51°F **Min RH:** 24-38% **LAL:** 1 **Haines:** 2**Winds (20 Foot):****Ridgetop** – Granddaddy Basin/Lake Fork Mountain – NW 12-18 mph with gusts to 35 mph until 1000, then NW at 20-30 mph with gusts 45-60 mph in the afternoon.**Slope/Valley** – West Fork Rock Creek and Hells Canyon - WNW winds at 8-12 mph with gusts to 24 mph until 1000 MDT, becoming NW 15-25 mph with gusts to 45 mph in the afternoon.**Today's General Fire Behavior:** Active fire behavior is forecasted today if fire is in alignment with wind, slope and continuous fuels. Expect isolated torching, roll out with uphill runs and spot fires within conifer stands if fire becomes established within this fuel type.

Maximum spotting distance: 0.7-mile Probability of Ignition: 57% ERC =80 (90% =82)

Fuels: Fuels remain dry due to lack of spring rains and non-existent monsoons for the last 3 years. All fuel size classes have been near critical levels for months. Live fuels are fully cured which means they will burn like dead fuel. The fire is mainly burning in mixed conifer stands with heavy dead/down and a shrub understory. Many of these stands have an extremely high mortality rate with a 50% or more standing snag component.**Topography:** Steep rugged canyons and bluffs that top out into high elevation meadows and lake systems. Large rocky fuel breaks occur within the higher elevation bluffs. Isolated areas of continuous fuel occur within the escarpment where fire will have the ability to move.**Specific Fire Behavior:****Mixed conifer stands with heavy dead and down:** Expect isolated torching, possible spot fires and roll out with uphill runs. Maximum ROS 19-33 ch/hr and flame length 11-14 feet.**Aspen stands:** Minimal fire behavior, creeping and smoldering.

Maximum ROS 2-4 ch/hr and flame length 1-2 feet.

Sagebrush and grass: Expect fire to move rapidly if it becomes established within this fuel type.

Maximum ROS 52-98 ch/hr and flame length 7-10 feet.

Lake Fork Drainage: Strong NW winds, lower RH, and dry fuels will allow for fire to burn actively through the drainage today. If fire finds its way into continuous and receptive fuels, sustained torching is likely along with spotting up to ¾ mile. Expect fire to make uphill runs on the SW facing slopes. Mixed conifer with heavy dead and down is the prominent fuel type within the drainage.

Air Ops/Smoke Dispersion

WINDY. Inversion base near 11,000 and top near 14,000 ft. will be present all day

Safety

- Flame lengths 4-8 feet are too intense for direct attack on the head with hand tools. Handline cannot be relied on to hold fire. Equipment such as dozers, engines, and aircraft can be effective.
- Flame lengths 8-11 feet present serious control problems, torching, crowning and spotting. Control efforts at the fire will probably be ineffective.

General Remarks, Safety Notes, Hazards, Air Operations Special Equipment, etc.
 TRACK ALL DIPSITE LOCATIONS / NUMBER OF DIPS / GALLONS TAKEN.
Assess mission complexity and the benefit/risk of the mission.
 All GPS DATA TO BE COLLECTED IN DEGREES, MINUTES, DECIMAL MINUTES FORMAT.

Be aware of cross contaminating water sources. Sanitize buckets upon arrival to incident and after dipping in or below Upper Stillwater Reservoir or Moon Lake before dipping from any upper water sources. Keep reservoir (or below) water out of "upper" stream channels including South Fork of Rock Creek and upper lakes. Only use sanitized buckets in upper lake water sources; however, reservoir water may be used when dropping on upper terrain if more than 150' from any waterways. Report any deviations to Air Ops. Include location, original water source, number of gallons.

Prior approval for wilderness landings are required. Do proper risk assessment for any landings over 10,000'

SAFETY MESSAGE

Stay focused on the safety aspects of your assignment

- Ensure LCES is in place prior to engagement.
- Establish decision points when conditions can deteriorate.
- Take weather observations.
- Monitor the fire environment for changes in the fuel, topographic and weather elements. Forecast the fire behavior.

-------------------------------------------------	-------------------------------------------	------------------------------------------------

Be sure all elements of your safety plan are in place prior to engagement

Planning for Safety

Have multiple plans and make them know

***P – Primary Plan (Offense)**

Focused on firefighter safety and mission objectives

***A – Alternate Plan (Offense)**

A fall back plan that closely supports the primary

***C- Contingency Plan (Defense)**

Entirely focused on firefighter safety

***E – Emergency Plan (Defense)**

Entirely focused on individual firefighter survival

Look Up, Look Down, Look Around During Mop Up

***Look Up:** Check the sky for any weather changes such as building or approaching thunderstorms, wind shifts or increasing in speed. Watch for air operations and water drops. Look for snags and the potential for rolling material.

***Look Down:** Watch your footing. Keep an eye out for snakes, bee's nests, Stump holes, and ash pits.

*** Look Around** Check for flagging identifying hazards in the area, and general terrain features. Keep an eye on fellow firefighters for signs of heat stress and fatigue.
