SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time

MAJOR HAZARDS AND RISKS

- | | |
|--|---|
| <ul style="list-style-type: none">• Dehydration—Drink lots of water• Communications....correct unclear transmissions• Human factor barriers to situation awareness• Traffic, wildlife, ATV's, and fire traffic. | <ul style="list-style-type: none">• Rocky, rough terrain--falls/slips• Urban Interface Hazards• Fatigue and Complacency |

L C E S

Do basic things very, very well

FIRE FIGHTER FATIGUE

- Fatigue management goes beyond counting hours on timesheets, it is individualized and overt.
- Cumulative fatigue is dangerous. It prevents sound decision-making, confounds situational awareness, and dulls reaction times. It is as problematic in the office as it is on the fireline.
- Fire fighters **MUST** assure their situational awareness and that risks are assessed and mitigated before committing to an action.
- Our values are simple...firefighter and public safety are the number one concern to be addressed within the priorities of suppression. Please take the time to watch out for each other

NORTH FIRE SUPPRESSION REPAIR STANDARDS

REQUIRED WORK ITEMS / STANDARDS – ALL DIVISIONS

Prepared by Niki Cutler, REAF

Applicable Standards

A. All incident sites – spike camps, drop points, medivac, staging areas, dip sites, etc.

- Identify and map any cultural resource locations that were impacted by suppression activities and report to Resource Advisor (READ/F).
- Remove all trash, garbage, signage, and flagging used during the fire. Bag garbage and throw away at designated dumpsters at Incident Command Post (ICP).
- Restore sites to similar pre-fire conditions including restricting access **if** area was previously blocked to vehicle use.

B. Constructed dozer lines

- Identify and map any cultural resource locations that were impacted by suppression activities and report to Resource Advisor (READ/F).
- Use excavator, or T4 trackhoe, and handcrews to knock down any berms, smooth dozer line to contour with the terrain, and scatter duff, branches, limbs and small logs over soil disturbed by line construction.
- Block dozer lines to vehicle access where dozer lines intersect with roads. Use boulders or berms to discourage vehicle use where feasible.
- Use excavator to clear material from drainages or channels to ensure water can freely flow when it rains.
- Construct water bars on all dozer lines according to specs below. Waterbars should be angled, out-sloped where possible and direct water away from creek channels.

Dozer line slope	Maximum distance between waterbars (ft)
0 - 10%	250'
11 - 20%	100'
21 - 40%	50'
> 41%	25'

C. Pre-existing roads used for fireline or access

- Clear out any culverts or drainages that were blocked with debris as a result of suppression activities.

D. Pull all hose and fittings (burned and unburned)

E. Repair cut fence

F. Close all gates to keep livestock from wandering onto pavement
