| <b>Comments /notes on tonight's mission and this interpretation:</b><br><br>I began interpretation with last night's IR heat perimeter. Imagery was clear and easily interpreted, although it required some care to find the point at which to switch from the northern to southern image. There was considerable overlap between the two images, but there were significant differences between heat perimeters on each image. I utilized an orthophoto background in order to assist in choosing which image to use for a given area. |   |  |   |
