Discussion: ***FIRE WEATHER WATCH FOR WEDNESDAY AFTERNOON AND EVENING***

The ridge of high pressure continues over the region today. Temperatures will be a few degrees warmer and winds slightly stronger compared to yesterday. An approaching system will cause winds to increase significantly on Wednesday along with keeping hot and dry conditions over the fire. The combination of winds and low humidity will create critical fire weather conditions Wednesday afternoon and evening.

WEATHER FORECAST FOR TODAY:

SKY/WEATHER: Mostly Sunny.

Max Temperature: High 92 to 102 lower elevations and 74 to 84 upper slopes/ridges.

Min RH: 8 to 18 percent.

Mid-slopes and Ridges: South 5 to 10 mph becoming West 10 to 15 mph gusts to 20 mph in the afternoon.

HAINES INDEX: 6 High.

TRANSPORT WINDS: W 20 mph.

INVERSION: 5000ft inversion lifting to 8000ft by afternoon.

TONIGHT:

SKY/WEATHER: Partly cloudy.

Min Temperature: 58 to 68.

Max RH: 25 to 35 percent, except 50 to 60 percent lower elevations.

20 ft Wind

Valleys/Lower Slopes: West 5 to 10 mph becoming terrain 3 to 8 mph after 2100 MDT, stronger through Panther Creek.

Mid-Slopes and Ridges: West 10 to 15 mph becoming South 5 to 10 mph after midnight.

INVERSION: Developing after 2000 hrs near 5000 ft.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER 49	TYPE OF INCIDENT: Wildland Fire
INCIDENT NAME: Moose	OPERATIONAL PERIOD 9/6/22 Day/Night
DATE ISSUED: 5 September 2022	TIME ISSUED: 2000

INPUTS

WEATHER SUMMARY See Fire Weather Forecast for specifics.

Day, upper elevations: 74° – 84° F, min. RH 8% – 18%, winds terrain driven 3 to 10 mph, becoming W 10 – 15, gusts to 20 in afternoon

Day, lower elevations: 92°– 102° F, min. RH 8% – 18%, Terrain driven winds 3 to 8 mph becoming West 5 to 10 mph in the afternoon. 5000ft inversion lifting to 8000ft by afternoon.

Night: 58° – 68° F, RH max. 25 to 35 percent, except 50 to 60 percent lower elevations. Low elevation winds W 5 to 10 mph becoming terrain 3 to 8 mph after 2100 MDT, stronger through Panther Creek. Wind mid-slope and ridges W 10 to 15 mph becoming South 5 to 10 mph after midnight.

FUELS CONDITIONS Indices for the GB02 SIG ERC Y above the 97th at 64.2, 1000 HR 10.1 at 90th, 100 HR at 7.9 above 97th. The live fuel herbaceous moisture is 30% or less low-elevation (below 6000', treated as dead), 50% to 120% as elevation increases; shrubs 110%, live fuel moisture in conifer range 109% to 140%.

OUTPUTS

GENERAL FIRE BEHAVIOR Fire persistence here is mostly dependent on the fuel moisture of the heavier dead fuels – the 100- and 1000-hours, which are little influenced by changes in relative humidity. At all elevations they are likely to have burned through the night. A strong inversion developed overnight, and that is likely to reduced spread, but not consumption of large fuels. In addition to continued consumption of heavier fuels, expect daytime general behavior as described below. General atmospheric instability (Haines index) is a good local predictor of potential for large fire growth, and **today's Haines index is 6 – High**

	ROS	Flame Length	Prob. of Ignition
Grass & shrub below 6000'	25 ch/hr, 2-4 ch/hr backing	2' backing, 6' front	90-100%
Grass & shrub above 6000'	18 ch/hr, 1-3 ch/hr backing	1' backing, 5' front	80-90%
Conifer outside of Clear CK burn	6 ch/hr, 1-2 ch/hr backing	1' backing, 3' front	80-90%

Spotting: In today's winds torching and spotting is possible, and rollout is possible in Div's O, T, and X. Spotting up to 1000' from source.

SPECIFIC FIRE BEHAVIOR

Mid- to high elevation: With the forecast winds and gusts this afternoon, expect moderate rates of spread with spotting possible. The areas of highest concern will be Div. O, in the headwaters of Moose Creek, and Div. T near Rapp Creek, Arenett Creek and Camp Creek.

Lower elevations (Divisions A and X): Fire remaining in Panther and Beaver Creeks will continue to fill in the unburned areas. All fuel types will be available to burn, but more-so in the afternoon.

Spotting is possible in today's conditions, and could be up to 1000' from the source.

Night Shift: Generally poor recovery expected at all elevations. Active fire behavior may be possible past 2400 Hr.

SAFETY

SAFETY Today's forecast conditions meet all four local watch-out thresholds. Keep that in mind.

AIR OPERATIONS The inversion could hinder air operations at lower elevations much of the day.

Prevention and Management of COVID-19 During Wildland Fire Operations

Keep yourself and your peers safe by practicing these measures whenever possible

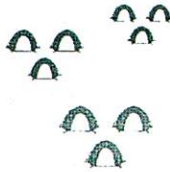

Practice Social/Physical Distancing

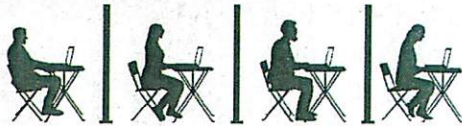

- Do not gather in groups or shake hands.
- Hold necessary meetings outside and maintain a social distance of 6 feet.
- Use radios, remote units, and virtual technology for communications as much as possible.

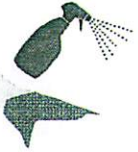

- Establish smaller spike camps to insulate crews/modules from each other and outside personnel and resources (Module as One).
- Keep newly onboarded crewmembers separate for 2 weeks.
- Create separate spaces in offices and housing and stagger work hours.

- Wear cloth face coverings and practice hand hygiene when riding in vehicles or coming into contact with outside resources, personnel, or the general public.

Clean and Disinfect

- Clean and disinfect shared areas and high touch surfaces in workplaces, vehicles, and housing at regular intervals.
- Use appropriate PPE and follow product label instructions when cleaning and disinfecting.

- Do not share dishes, drinking glasses, cups, eating utensils, towels, or bedding without appropriately sanitizing them.
- Minimize equipment sharing, disinfect equipment, and wash/sanitize hands before and after use.

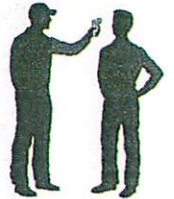

Maintain a Healthy Workforce

- Monitor your own health and maintain awareness of symptoms.
- Prioritize rest, proper hydration, and nutrition to reduce cumulative fatigue.
- Practice rigorous sanitation and personal hygiene, including covering coughs and sneezes and washing/sanitizing hands.
- Conduct symptom screening, including temperature checks, at duty stations or on incidents.
- Mitigate smoke exposure whenever possible.
- Assign at-risk individuals to duties that reduce their potential for contracting the illness.

98.6 °F

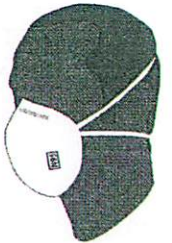

Prevent the Spread of COVID-19

- Separate sick individuals; provide a separate bedroom, bathroom, and essential supplies.
- Sick individuals must wear a face mask or cloth covering over their nose and mouth and maintain a 6-foot distance.
- Seek immediate medical attention if someone develops emergency warning signs for COVID-19.
- Only discontinue isolation after meeting CDC criteria.

Understand Different Face Coverings

- Cloth face coverings over the mouth and nose are not PPE and should be washed with soap and water after each use.
- Disposable face and surgical masks covering the mouth and nose are not PPE and should be discarded after one use.
- N95 filtering facepiece respirators are PPE and have a close facial fit and efficient filtration of airborne particles.

Moose Fire

Initial Attack Responsibility and Procedures

The following applies to all IA responses:

- Responding resources will inform Central Idaho Dispatch (IDCIC) of the number, type and kind of resources responding.
- Once on scene Initial Attack resources will provide the initial sizeup directly to ID-CIC.
- After reporting to ID-CIC an additional size-up will be reported through Moose Fire Communications.
- All ordering, updates and coordination will follow Great Basin Team 5 Operations Protocols.
- If requested, the Planning Operations Chief will update the jurisdictional Duty Officer.
- Initial Attack activities will be documented using the appropriate Incident Organizer and be transferred to ID-CIC at the conclusion of the IA.
- Initial coordinates for the new start will be provided to the Situation Unit through Moose Fire Communications.

Fires within the IA Responsibility Area (Under the TFR):

- After reporting the initial size-up, all fire status updates will be communicated through Moose Fire Communications.
- Line Ops will be contacted in the event of all new smoke reports, who will send appropriate identified resources.
- All requests for additional resources will go through Line Ops.
- Great Basin Team 5 will manage the fire until it is suppressed completely, turned over to the local unit or the agency administrator makes a different decision regarding its management.
- In the event the initial smoke report goes through ID-CIC, they will notify Moose Fire communications and all above procedures will be implemented.

Fires outside the IA Responsibility Area:

- ID-CIC may dispatch local resources to the fire unless the jurisdictional Duty Officer requests Moose incident resources to provide initial attack support.
- The jurisdictional duty officer will make any requests for support through Planning Ops.
- Planning Ops will coordinate with Line Ops to determine whether the Moose Incident can accommodate request for IA support.
- If Moose Fire resources are utilized, and arrive on-scene first, they will provide a size up to ID-CIC.
- If local jurisdictional resources also respond, ID-CIC will coordinate frequency use that utilizes the Moose IA Communications Plan.
- Moose Fire resources will communicate through ID-CIC until released from the incident.
- Aviation resources may go direct to the dispatch center for their notification and size up but must also coordinate with the Moose Fire Air Attack or Heli-base as appropriate.

Resource Advisor's Message—September 6, 2022

Fish Screens

- During drafting operations, water pumping can harm fish, especially juveniles, if the pump intake has enough velocity to suck fish in.
- To avoid injury to fish, a properly sized and screened structure must surround the water intake structure.
- Fish screens are required on all foot valves, within all waterways within the Salmon-Challis NF, per the Endangered Species Act.

Protection of Endangered Species

A 100 GPM Fish Strainer can be used for protection of anadromous fish fry and debris avoidance. All water sources will require a fish strainer on the Salmon-Challis NF.

Correct Placement:
Insert the foot valve and suction hose into the fish strainer until it contacts the bottom plate.

Secure the Fish Strainer:
Use the adjustable strap to secure the fish strainer to the suction hose by tightening the adjustable strap and locking it in place with the cam locking mechanism.

Storage:
The adjustable strap and cam locking mechanism can be used to compress the fish strainer for storage.

You can protect Idaho Salmon by:

- Selecting largest streams possible to pump out of.
- Avoid dewatering streams.
- All pumps MUST be screened with 3/32-inch screening.
- Use containment berms and absorbent pads to contain fuel spills and closely monitor gasoline storage near streams.
