Discussion: ***RED FLAG WARNING FROM 1300 TO 2100 MDT TODAY***

A disturbance moves through the region north of the fire causing the winds to increase during the afternoon and evening. Temperatures will remain extremely warm with low humidity readings. The combination of winds and humidity will create critical fire weather conditions. A storm could impact the fire this afternoon with a better chance during the evening hours. Any storm that forms will be capable of gusty outflow with little chance of beneficial precipitation. A cold front moves through the region on Thursday turning the winds to a northerly component along with cooler temperatures.

WEATHER FORECAST FOR TODAY: ***Red Flag Warning from 1300 to 2100 MDT***

INPUTS

WEATHER SUMMARY Red Flag Warning From 1300 to 2100 MDT

Max Temperature: High 90 to 100 lower elevations and 72 to 82 upper slopes/ridges.

Min RH: 10 to 20 percent.

20 ft WINDS:

Lower Valleys: Terrain driven winds 3 to 8 mph becoming West 10 to 15 mph in the afternoon.

Mid-slopes and Ridges: South 5 to 10 mph becoming West 15 to 20 mph gusts to **35** mph in the afternoon

Night: 53° – 63° F, RH max. 38 to 48 percent, except 65 to 75 percent lower elevations.

Low elevation winds W 10 to 15 mph becoming terrain 3 to 8 mph after 2300 MDT, stronger through Panther Creek. Wind mid-slope and ridges W 15 to 20 mph becoming NW 10 to 15 mph after midnight.

See Fire Weather Forecast for specifics.

FUELS CONDITIONS Indices for the GB02 SIG ERC Y above the 97th at 65.8, 1000 HR 9.8 at 90th, 100 HR at 7.7 above 97th. The live fuel herbaceous moisture is 30% or less low-elevation (below 6000', treated as dead), 50% to 120% as elevation increases; shrubs 110%, live fuel moisture in conifer range 109% to 140%.

OUTPUTS

GENERAL FIRE BEHAVIOR Fire persistence here is mostly dependent on the fuel moisture of the heavier dead fuels – the 100- and 1000-hours, which are little influenced by changes in relative humidity. At all elevations they are likely to have burned through the night. A strong inversion developed overnight, and that is likely to reduced spread, but not consumption of large fuels. In addition to continued consumption of heavier fuels, expect daytime general behavior as described below. General atmospheric instability and dryness (Haines index) is a good local predictor of potential for large fire growth, and **today's Haines index is 5 Mod**

	ROS	Flame Length	Prob. of Ignition
Grass & shrub below 6000'	25 ch/hr, 2-4 ch/hr backing	4' backing, 8' front	90-100%
Grass & shrub above 6000'	18 ch/hr, 1-3 ch/hr backing	2' backing, 6' front	80-90%
Conifer outside of Clear CK burn	30 ch/hr, 2-4 ch/hr backing	5' backing, 15' front	80-90%

Active crown fire possible, generally passive crown fire-This has potential of spotting up to 1 mile.

SPECIFIC FIRE BEHAVIOR

Mid- to high elevation: With the forecast winds and gusts this afternoon, expect high rates of spread with spotting possible long-range spotting. The areas of highest concern east of the 300 road in Rabbit, Sharkey and Napias drainages. Uphill runs possible with medium to long range spotting likely.

Lower elevations (Divisions A and X): Fire remaining in Panther and Beaver Creeks will continue to fill in the unburned areas. All fuel types will be available to burn, but more-so in the afternoon.

Night Shift: Generally poor recovery expected at all elevations. Active fire behavior may be possible past well past 2400 Hr. Medium to long range spotting likely-1000 ft up to 1 mile.

SAFETY

SAFETY Large fire growth likely with long range spotting, rapid growth is expected.

AIR OPERATIONS The inversion should break by 1300 and the higher winds should scrub out most of the smoke

Prevention and Management of COVID-19 During Wildland Fire Operations

Keep yourself and your peers safe by practicing these measures whenever possible

Practice Social/Physical Distancing

- Do not gather in groups or shake hands.
- Hold necessary meetings outside and maintain a social distance of 6 feet.
- Use radios, remote units, and virtual technology for communications as much as possible.

- Establish smaller spike camps to insulate crews/modules from each other and outside personnel and resources (Module as One).
- Keep newly onboarded crewmembers separate for 2 weeks.
- Create separate spaces in offices and housing and stagger work hours.

- Wear cloth face coverings and practice hand hygiene when riding in vehicles or coming into contact with outside resources, personnel, or the general public.

Clean and Disinfect

- Clean and disinfect shared areas and high touch surfaces in workplaces, vehicles, and housing at regular intervals.
- Use appropriate PPE and follow product label instructions when cleaning and disinfecting.

- Do not share dishes, drinking glasses, cups, eating utensils, towels, or bedding without appropriately sanitizing them.
- Minimize equipment sharing, disinfect equipment, and wash/sanitize hands before and after use.

Maintain a Healthy Workforce

- Monitor your own health and maintain awareness of symptoms.
- Prioritize rest, proper hydration, and nutrition to reduce cumulative fatigue.
- Practice rigorous sanitation and personal hygiene, including covering coughs and sneezes and washing/sanitizing hands.
- Conduct symptom screening, including temperature checks, at duty stations or on incidents.
- Mitigate smoke exposure whenever possible.
- Assign at-risk individuals to duties that reduce their potential for contracting the illness.

98.6 °F

Prevent the Spread of COVID-19

- Separate sick individuals; provide a separate bedroom, bathroom, and essential supplies.
- Sick individuals must wear a face mask or cloth covering over their nose and mouth and maintain a 6-foot distance.
- Seek immediate medical attention if someone develops emergency warning signs for COVID-19.
- Only discontinue isolation after meeting CDC criteria.

Understand Different Face Coverings

- Cloth face coverings over the mouth and nose are not PPE and should be washed with soap and water after each use.
- Disposable face and surgical masks covering the mouth and nose are not PPE and should be discarded after one use.
- N95 filtering facepiece respirators are PPE and have a close facial fit and efficient filtration of airborne particles.

Moose Fire

Initial Attack Responsibility and Procedures

The following applies to all IA responses:

- Responding resources will inform Central Idaho Dispatch (IDCIC) of the number, type and kind of resources responding.
- Once on scene Initial Attack resources will provide the initial sizeup directly to ID-CIC.
- After reporting to ID-CIC an additional size-up will be reported through Moose Fire Communications.
- All ordering, updates and coordination will follow Great Basin Team 5 Operations Protocols.
- If requested, the Planning Operations Chief will update the jurisdictional Duty Officer.
- Initial Attack activities will be documented using the appropriate Incident Organizer and be transferred to ID-CIC at the conclusion of the IA.
- Initial coordinates for the new start will be provided to the Situation Unit through Moose Fire Communications.

Fires within the IA Responsibility Area (Under the TFR):

- After reporting the initial size-up, all fire status updates will be communicated through Moose Fire Communications.
- Line Ops will be contacted in the event of all new smoke reports, who will send appropriate identified resources.
- All requests for additional resources will go through Line Ops.
- Great Basin Team 5 will manage the fire until it is suppressed completely, turned over to the local unit or the agency administrator makes a different decision regarding its management.
- In the event the initial smoke report goes through ID-CIC, they will notify Moose Fire communications and all above procedures will be implemented.

Fires outside the IA Responsibility Area:

- ID-CIC may dispatch local resources to the fire unless the jurisdictional Duty Officer requests Moose incident resources to provide initial attack support.
- The jurisdictional duty officer will make any requests for support through Planning Ops.
- Planning Ops will coordinate with Line Ops to determine whether the Moose Incident can accommodate request for IA support.
- If Moose Fire resources are utilized, and arrive on-scene first, they will provide a size up to ID-CIC.
- If local jurisdictional resources also respond, ID-CIC will coordinate frequency use that utilizes the Moose IA Communications Plan.
- Moose Fire resources will communicate through ID-CIC until released from the incident.
- Aviation resources may go direct to the dispatch center for their notification and size up but must also coordinate with the Moose Fire Air Attack or Heli-base as appropriate.
