Discussion: *****RED FLAG WARNING FROM 1200 TO 2100 MDT TODAY*****

A dry cold front passes through the region today bringing another day of critical fire weather conditions. While temperatures will be about 15 degrees cooler today, relative humidity remain in the teens and possibly down into the single digits in lower valleys. Gusty northwest winds will fill in behind the cold front, turning north after approximately 1800 hours. Due to the gusty winds and low relative humidity, a Red Flag Warning is in effect for this afternoon and evening. Cold conditions settle in behind the cold front tonight with improving overnight relative humidity recoveries, especially in lower valleys. Overnight lows drop down to around freezing in the valleys. Friday will be cooler and dry, with mostly sunny skies. Friday night looks to be even colder, with lows dropping below freezing across the lower valley locations.

WEATHER FORECAST FOR TODAY: *****Red Flag Warning from 1200 to 2100 MDT*****

Mid-slopes and Ridges: West 5 to 10 mph becoming Northwest 15 to 20 mph gusts to 25 mph after 1200 MDT, then turning North 12 to 18 gusts to 20 mph after 1800 MDT. Strongest winds expected across ridgetops.

HAINES INDEX: 4 Low.

Min RH: 8 to 18 percent.

20 ft WINDS:

Lower Valleys: Terrain driven winds 3 to 8 mph becoming NW 10 to 15 mph gusts to 20 mph after 1200.

Mid-slopes and Ridges: West 5 to 10 mph becoming NW 15 to 20 mph gusts to 25 mph after 1200.

Night: 30° – 40° F, RH max. 40 to 50 percent, except 65 to 75 percent lower elevations.

Low elevation winds N 8 to 15 mph becoming terrain 4 to 8 mph after 2300 MDT. Wind mid-slope and ridges N 12 to 18 mph becoming NNW 6 to 10 mph after midnight.

See Fire Weather Forecast for specifics.

FUELS CONDITIONS Indices for the GB02 SIG ERC Y above the 97th at 65.9, 1000 HR 9.7 at 90th, 100 HR at 7.6 above 97th. The live fuel herbaceous moisture is 30% or less low elevation (below 6000', treated as dead), 50% to 120% as elevation increases; shrubs 110%, live fuel moisture in conifer range 109% to 140%.

OUTPUTS

GENERAL FIRE BEHAVIOR Fire persistence here is mostly dependent on the fuel moisture of the heavier dead fuels – the 100- and 1000-hours, which are little influenced by changes in relative humidity. At all elevations they are likely to have burned through the night. With the critically dry fuels, any wind 10 mph or more can quickly grow and produce long range spotting. Extreme Fire behavior possible with rapid growth fire growth. In addition to continued consumption of heavier fuels, expect daytime general behavior as described below. General atmospheric instability and dryness (Haines index) is a good local predictor of potential for large fire growth, and **today's Haines index is 4 Low**

	ROS	Flame Length	Prob. of Ignition
Grass & shrub below 6000'	12-25 ch/hr, 3-5 ch/hr backing	2-4' backing, 14' front	90-100%
Grass & shrub above 6000'	18-34 ch/hr, 2-3 ch/hr backing	2-4' backing, 15' front	80-90%
Conifer outside of Clear CK burn	30- 60 ch/hr, 2-4 ch/hr backing	2-5' backing, 30' front	70-90%

Active crown fire possible, generally passive crown fire-This has potential of spotting up to 1 mile.

SPECIFIC FIRE BEHAVIOR

Mid- to high elevation: With the forecast winds and gusts this afternoon, expect high rates of spread with possible long-range spotting. The areas of highest concern east of the 300 road in **Div M** Beartrack and Webfoot Drainages, **DIV T** Rabbit, Sharkey and Napias drainages. Uphill runs possible with medium to long range spotting likely.

Lower elevations: (Divisions A and X): Fire remaining in Panther and Beaver Creeks will continue to fill in the unburned areas. All fuel types will be available to burn, but more-so in the afternoon.

Night Shift: Better RH recovery expected at all elevations. Inversion developing after 2000 hrs near 5000 ft. With wind above 10 mph fire could still be active late into the night, capable of producing short runs with medium to long range spotting.

SAFETY

SAFETY Large fire growth likely with long range spotting, rapid growth is expected.

AIR OPERATIONS The inversion should break by 1200 and the higher winds should scrub out most of the smoke

6. Control Operations/Work Assignments:

Task: Continue to protect values at risk within the division. Start to scout and implement contingency lines.

Purpose: Manage fire effects to prevent fire spread to the east and south of 300 Road (Moose Creek Road). Limit potential impacts to Beartrack Mine, Leesburg and Salmon, ID area infrastructure, private property, and historic and natural resources.

End State: Damage to local values at risk is limited, while minimizing risk to first responders. Fire is prevented from impacting watersheds to the extent possible and critical powerline infrastructure.

Complacency- *Keep your head in the game. Pay attention to the little things that you can do to keep this a successful assignment.*

Fatigue- *It has been a long fire season. Most of you have been on multiple deployments. Remember to take care of yourself and your assigned resources. Always remember to hydrate and don't skip meals.*

DEMOB DREAMS- *A successful assignment ends when you walk through your front door. Please continue to focus on your responsibilities...to yourself, to your fellow firefighters, and to your family. You may be on to demob, others are not. They are still counting on you to do your job safely and effectively.*

Prevention and Management of COVID-19 During Wildland Fire Operations

Keep yourself and your peers safe by practicing these measures whenever possible

Practice Social/Physical Distancing

- Do not gather in groups or shake hands.
- Hold necessary meetings outside and maintain a social distance of 6 feet.
- Use radios, remote units, and virtual technology for communications as much as possible.
- Establish smaller spike camps to insulate crews/modules from each other and outside personnel and resources (Module as One).
- Keep newly onboarded crewmembers separate for 2 weeks.
- Create separate spaces in offices and housing and stagger work hours.
- Wear cloth face coverings and practice hand hygiene when riding in vehicles or coming into contact with outside resources, personnel, or the general public.

Clean and Disinfect

- Clean and disinfect shared areas and high touch surfaces in workplaces, vehicles, and housing at regular intervals.
- Use appropriate PPE and follow product label instructions when cleaning and disinfecting.
- Do not share dishes, drinking glasses, cups, eating utensils, towels, or bedding without appropriately sanitizing them.
- Minimize equipment sharing, disinfect equipment, and wash/sanitize hands before and after use.

Maintain a Healthy Workforce

- Monitor your own health and maintain awareness of symptoms.
- Prioritize rest, proper hydration, and nutrition to reduce cumulative fatigue.
- Practice rigorous sanitation and personal hygiene, including covering coughs and sneezes and washing/sanitizing hands.
- Conduct symptom screening, including temperature checks, at duty stations or on incidents.
- Mitigate smoke exposure whenever possible.
- Assign at-risk individuals to duties that reduce their potential for contracting the illness.

98.6 °F

Prevent the Spread of COVID-19

- Separate sick individuals; provide a separate bedroom, bathroom, and essential supplies.
- Sick individuals must wear a face mask or cloth covering over their nose and mouth and maintain a 6-foot distance.
- Seek immediate medical attention if someone develops emergency warning signs for COVID-19.
- Only discontinue isolation after meeting CDC criteria.

Understand Different Face Coverings

- Cloth face coverings over the mouth and nose are not PPE and should be washed with soap and water after each use.
- Disposable face and surgical masks covering the mouth and nose are not PPE and should be discarded after one use.
- N95 filtering facepiece respirators are PPE and have a close facial fit and efficient filtration of airborne particles.

Moose Fire

Initial Attack Responsibility and Procedures

The following applies to all IA responses:

- Responding resources will inform Central Idaho Dispatch (IDCIC) of the number, type and kind of resources responding.
- Once on scene Initial Attack resources will provide the initial sizeup directly to ID-CIC.
- After reporting to ID-CIC an additional size-up will be reported through Moose Fire Communications.
- All ordering, updates and coordination will follow Great Basin Team 5 Operations Protocols.
- If requested, the Planning Operations Chief will update the jurisdictional Duty Officer.
- Initial Attack activities will be documented using the appropriate Incident Organizer and be transferred to ID-CIC at the conclusion of the IA.
- Initial coordinates for the new start will be provided to the Situation Unit through Moose Fire Communications.

Fires within the IA Responsibility Area (Under the TFR):

- After reporting the initial size-up, all fire status updates will be communicated through Moose Fire Communications.
- Line Ops will be contacted in the event of all new smoke reports, who will send appropriate identified resources.
- All requests for additional resources will go through Line Ops.
- Great Basin Team 5 will manage the fire until it is suppressed completely, turned over to the local unit or the agency administrator makes a different decision regarding its management.
- In the event the initial smoke report goes through ID-CIC, they will notify Moose Fire communications and all above procedures will be implemented.

Fires outside the IA Responsibility Area:

- ID-CIC may dispatch local resources to the fire unless the jurisdictional Duty Officer requests Moose incident resources to provide initial attack support.
- The jurisdictional duty officer will make any requests for support through Planning Ops.
- Planning Ops will coordinate with Line Ops to determine whether the Moose Incident can accommodate request for IA support.
- If Moose Fire resources are utilized, and arrive on-scene first, they will provide a size up to ID-CIC.
- If local jurisdictional resources also respond, ID-CIC will coordinate frequency use that utilizes the Moose IA Communications Plan.
- Moose Fire resources will communicate through ID-CIC until released from the incident.
- Aviation resources may go direct to the dispatch center for their notification and size up but must also coordinate with the Moose Fire Air Attack or Heli-base as appropriate.

Resource Advisor's Message—September 8, 2022

Fuel Containment

- Gas absorbent pads should be replaced regularly. To discard, put gas pads in garbage bag and throw away. This is OK, even if they have absorbed gasoline.
- If water with a gas sheen on the surface accumulates within the containment, place absorbent pad on surface of the water and allow the pad to absorb the gas (10-15 min). Discard the pad, pour residual water into a bucket or carefully carry the containment tray at least 300 ft. away from the stream or pond, and pour water on the ground.

*If a spill occurs or gas enters a stream/pond, notify your supervisor immediately. Spill containment kits are available at district offices and ICPs. The Resource Advisors must be notified immediately. Questions? Contact your local READ.
