Date and Time Products Delivered to Incident:		Digital files: Posted to: <ul style="list-style-type: none"> • ftp.nifc.gov/incident_specific_data/great_basin/2022_Incidents/2022_Moose/IR • NIFS 	
Comments /notes on tonight's mission and this interpretation: Aircell went down on the second leg of the IR journey aboard N149Z so I wasn't able to access the raw data until 0315 MDT...oye! The largest heat perimeter expansions were on the western flank in the Reservoir/Sawlog Gulch & also along Salmon River where the heat perimeter expanded by ½ mile. There was intense and scattered heat predominantly in the southern half of the fire as well as interior isolated heat.
