

INFRARED INTERPRETER'S DAILY LOG

Incident Name: Wolf Fang ID-SCF-022091	IR Interpreter(s): Chad Horman chad.horman@usda.gov	Local Dispatch Phone: Central Idaho Dispatch 208-758-5157	Interpreted Size: 1,493 Acres Growth last period: 11 Acres
Flight Time: 0051 MDT Flight Date: 08/22/2022	Interpreter(s) location: Enoch, UT Interpreter(s) Phone: 435-592-5175	GACC IR Liaison: Nathan Yorganson GACC IR Liaison Phone: Work – (208) 557-5785 Cell – (208) 557-5826	National Coordinator: Tom Mellin National Coord. Phone: Work – (505) 842-3846 Cell – (505) 301-8176
Ordered By: ID-SCF	A Number: A-37	Aircraft/Scanner System: N149Z/Phoenix	Pilots/Techs: Pilots: Boyce/Helquist Tech: Mann
IRIN Comments on imagery: Clear and good orthorectification		Weather at time of flight: Clear	Flight Objective: Heat Perimeter Detection / Categorizing Heat Intensity
Date and Time Imagery Received by Interpreter: 08/22/2022 @ 0105 MDT		Type of media for final product: Shapefiles, one geodatabase, two pdf maps, kmz file, IRIN log. IR data was posted to IRIN Edit Services (National Incident Feature Service 2022) Digital files sent to: https://ftp.wildfire.gov/public/incident_specific_data/great_basin/2022_Incidents/2022_WolfFang/IR/20220822	
Date and Time Products Delivered to Incident: IR data uploaded to EIN: 08/22/2022 @ 0515 MDT IR products uploaded to ftp: 08/22/2022 @ 0530 MDT			
Comments /notes on tonight's mission and this interpretation: <ul style="list-style-type: none"> • Started IR interpretation with wildfire perimeter from latest IR flight on 8/21/2022. The Wildfire Daily Perimeter for this incident has not been inputted into Internal View Services (National Incident Feature Service 2022). • Minimal fire activity. Perimeter acreage increased by 11 acres for a total of 1,493. • Areas of activity are the northwest tip and in the northeast edge. • There are a few active spot fires in upper western edge and in on the eastern edge. • The largest one on the eastern side had a small amount of intense heat. • Intense associated with areas of activity mentioned above. • Scattered heat is mainly in the areas of perimeter activity. One exception is a small patch near the southwest tip of the fire. • Isolated heat is mostly occurring in the northwest section and the eastern third of the burn area. • The provided geodatabase and shapefiles are in in WGS84 decimal degrees, so would be convenient for working in IES and IVS. • Maps are in NAD83 UTM 11. • Feedback is always appreciated. Please contact the interpreter at the contact information listed above.
