<b>IRIN Comments on imagery:</b> Clear		<b>Weather at time of flight:</b> Clear	<b>Flight Objective:</b> PDF Map, shapefiles, kmz, GDB
<b>Date and Time Imagery Received by Interpreter:</b> 0201 MDT		<b>Type of media for final product:</b> PDF Map, shapefiles, kmz, GDB  <b>Digital files sent to:</b> /incident_specific_data/great_basin/2022_Incidents/2022_Woodtick/IR/20210831	
<b>Date and Time Products Delivered to Incident:</b> 0400 MDT			
<b>Comments /notes on tonight's mission and this interpretation:</b> The image was clear and easily read. I started interpretation with the most recent fire perimeter in NIFS. There were some isolated heat sources within the heat perimeter and some scattered and intense heat mainly along the northern edge. I checked my interpretation against the raw heat data and confirmed that there were not any isolated heat sources outside of the perimeter that I may have missed. There was some distortion in the image along the northwestern portion of the image, however, there was little growth in that area, so the impact was likely minimal
