Fire Weather Planning Forecast for Utah
National Weather Service Salt Lake City UT
308 PM MDT Mon Sep 11 2023

...UNSETTLED CONDITIONS WITH INCREASED HUMIDITY MUCH OF THIS WEEK...

.BROADCAST DISCUSSION...Widespread unsettled weather and increased chances for wetting rains will return to much of the state through the workweek, along with cooler temperatures. A drying trend will follow this weekend.

.DISCUSSION...An increase in moisture moves into the state in Tuesday. Combined with an upper-level disturbance moving into the region, this will trigger widespread showers and thunderstorms capable of wetting rains over southern and central Utah. For northern Utah, showers and thunderstorms will remain more limited to higher terrain, however cloud cover and RH will increase.

Another trough of low pressure will slide into the area from the north and potentially persist through the end of the workweek. This will bring a gradual cooling trend to the state through the week, while also maintaining higher levels of humidity along with continued precipitation chances. Statewide chances of wetting rains will be highest on Wednesday, with the coolest temperatures on Thursday at around 5 degrees below normal.

Drier and quieter weather returns by the weekend, along with temperatures around normal for this time of year.

Thunderstorms imply strong, gusty and erratic winds
All winds are 20 foot, 10-minute averages
