Water-Drafting Best Practices – Secondary Sources

This setup had a 2-inch line running back to a hardened site that trucks could hook up to, fire up the pump, and fill >50 feet from the creek.

Heliwells are nice.

Tertiary drafting!

Trash pump servicing a pumpkin for tenders and engines.

Extra fuel nicely contained >10 feet from the stream.

Improved bucket-screen on a trash pump to service 2 fold-a-tanks in a turnout up on the highway.

Using secondary drafting techniques minimizes resource concerns including the potential to: directly disturb T&E fish, spread aquatic invasive species, damage streamside vegetation & wetlands, erode the banks of lakes and streams, and introduce contaminants (sediment, fuel ... even equipment!) to natural waterbodies.

The SCNF thanks you for your support!

Safety Spotlight:

PLANNING FOR MEDICAL EMERGENCIES

Prior to each operational period, all wildland firefighters need to ask and be able to answer the following questions:

1. **What are we going to do is someone gets hurt?**
2. **How will we get them out of here?**
3. **How long will it take to get them to them to the hospital?**

All operational activities should be based on answers to these questions. If the answers are insufficient, stop, reassess and consider alternative strategies and tactics.

- Anticipate and Manage Risk by Planning

Safety Officer
Todd DeMasters, SOFC
