SAFETY MESSAGE

Stay focused on the safety aspects of your assignment

- Ensure LCES is in place prior to engagement.
- Establish decision points when conditions can deteriorate.
- Take weather observations.
- Monitor the fire environment for changes in the fuel, topographic and weather elements. Forecast the fire behavior.
- Evaluate the work area for hazards, communicate hazards, mitigate, or avoid the hazards.

MAJOR HAZARDS AND RISKS

STEEP TERRAIN NARROW ROADS SPOT FIRES	ROLLING MATERIAL BUCKET DROPS GRIZZLY BEARS	HEAVY EQUIPMENT HAZARD TREES COMMUNICATION
---	---	--

Be sure all elements of your safety plan are in place prior to engagement

Communication Responsibilities

All Firefighters have five communication responsibilities

- ***Briefings** – All resources require briefings. Use briefing checklist in pocket guide.
- ***Debrief Actions** – as necessary. Use pocket guide After Action Review to stimulate discussion and provide guidance.
- ***Communicate Hazards to Others** –
- ***Acknowledge messages** –
- ***Ask if you do not know** –Ask questions in unfamiliar situations. The only dumb question is the one you did not ask.

The greatest problem with communication is the illusion that it has been achieved

Stay Hydrated

Drink fluids before, during, and after the shifts.

For every 2 bottles of water, drink 1 bottle of Gatorade.

At 2% dehydration, performance will fall off by 10-20% and is the #1 trigger of fatigue.

How to minimize Your Risk in Bear

Country

1. Carry an accessible bear spray and know how to use it.
2. Hike in groups of three or more.
3. Make noise to avoid startling a bear (i.e. singing, yelling, clapping), especially in areas where you can't hear well or see very far.
4. Be alert to your surroundings
5. If you do see a bear, maintain at least 100 yds between the bear and yourself.
6. Keep all bear attractants (e.g. food, coolers, backpacks, anything with a scent) with you or properly secured at all times.
7. Take note of bear sign (e.g. tracks, bear scat, ripped apart logs).
8. Avoid carcasses (often identified by groups of ravens and magpies) and other seasonal food sources (e.g. berry patches).

Grizzly Bear

What you should know about Bear Spray

Carry Bear Spray and Know How to Use it!

Bear spray is one of the last tools in your toolbox. It *should not provide a false sense of security.*

Know how to use your bear spray. Practice using bear spray before you go hiking, so you know what to do when the time comes.

Practice pulling the canister out of its holster and removing the safety on the trigger, but be careful to not discharge it.

Have your bear spray ready. Keep your bear spray on a belt holster or on a chest holster at all times. Never keep it in your backpack while hiking—you won't be able to reach it in time if a bear charges or attacks you.

When a bear attacks or charges you, spray a cloud between you and the bear, and be ready to spray multiple times or empty the can.

How to use: Spray at close range, about 20–30 feet away, at a slight downward angle in front of the bear's head.

Spray until the bear's behavior changes.

You should be cautious when handling and **transporting** bear spray and leave the safety on until you are ready to use

Never leave a bear spray in a hot vehicle or exposed to the hot sun for long periods of time.

Strong winds will affect spray distance and direction. Snow, rain, and cold weather will decrease spray distance.

Always be up wind if possible.

NEEDLES OF FIVE...LEAVE IT ALIVE!

Whitebark Pine (WBP) – A Living Legacy

Facts:

- They typically grow above ~6,500 ft. elevation- on summits, ridges and rocky exposed slopes.
- They are slow growing; cones not produced until ~30-60 yrs. The oldest whitebark pine is in Idaho and is >1,270 years old!
- Act as snow fences to hold moisture later in the spring gradually releasing water into the stream systems.
- The seeds are an important food source for wildlife including black bear and the Clark's nutcracker.

Why is this species such a big deal?

- On December 15, 2022, the U.S. Fish and Wildlife Service published a final rule (87 FR 76882) to list the WBP as a threatened species under the Endangered Species Act.

General Information Regarding WBP:

- The Clark's nutcracker, a native bird, can carry up to 30 WBP seeds at a time and cache them up to 10 miles away from harvest site for future food source.
- The four main causes of WBP loss are white pine blister rust, mountain pine beetle attacks, fire exclusion and climate change.
- It is very important that we do our best to protect the remaining WBP. These survivors may contain genetic resistance to the rust that could be critical to the long-term survival of this species.

What Can I Do?

- Learn to identify whitebark pine and its' habitat - teach others.
- Report location information to a botanist – collect coordinates/pictures/notes OR try Survey123 whitebark pine survey with this QR code (or link at bottom of page):

- Find out where 'plus' or 'elite' trees occur (AGOL or botanist) and NEVER cut them down. Protect them from Rx and wild fire.
- Avoid cutting (especially > 4" DBH), damaging (ex: digging/burning w/n 10 m., limbing, etc.) or impeding (ex: piling slash on top of or w/n 10 m.) WBP whenever possible in ALL management activities.
- Avoid constructing helispots or staging equipment, fire camps, vehicles, etc. in occupied whitebark pine habitat.
- Cut other species, such as subalpine fir, in order to help promote the growth and vigor of the existing WBP.

WBP Mature Female Cones

Fascicles at Branch Ends

Mature WBP

Identification

- 5 needles per fascicle (group)
- Needle fascicles clustered on the end of branches
- WBP can easily be confused with lodgepole pine, which can have similar bark, but only 2 needles per fascicle
- Needle clusters on the branches have thicker and more clumpy appearance than lodgepole pine
- Crown is broadly branched and open
- Thin, gray bark
- Female cones purplish-brown; often in groups of 2-5 (3) cones.
