<u>WEATHER DISCUSSION:</u>...A ridge of high pressure will maintain control of the area keeping the weather pattern fairly similar. High temperatures will remain about 10 degrees above average for early October as we maintain a warm and dry spell. Winds will remain westerly but with a slight southerly component giving us a west-southwest wind at ridgetop. This small change in wind direction will cause stronger winds at locations that were previously sheltered from the wind. A weak cold front passing by Thursday night will increase winds Thursday and Friday.

FORECAST FOR TODAY: Mostly Sunny (0-20%). Smoky.

Max Temperature(°F):

Min RH:

Spotting distance: .6 miles Crown Fire ROS 56 ch/hr

- Expect moderate to dangerous rates of spread with alignment of slope and wind. Group torching and spotting can contribute to significant fire growth.
- Grass and sagebrush are carrying fire in the meadows on the southern part of the fire.
- Fire behavior will become active around 1300 and remain active until around midnight. Cloud or smoke shading will moderate fire behavior in affected areas.
- Group torching and crown runs have been observed, with spotting distance greater than 1/2 mile.
- Very heavy fuel loading in an area with high mortality, 1000-hour fuels are consuming and contributing to fire load. Fuels are at critical levels. Expect high energy release and extended residence/burn out times.

Fuel Type	Flame Length	Crown Fire Flame Length	Max Rate of spread	Spotting Distance	Probability of Ignition
Moderate load dry climate shrubSH2	<5	30	12 ch/hr	.6 mi	60%

Moderate load dry climate grass- shrub GS2	<7	26	57 ch/hr	.6 mi	60%

SAFETY

Anticipate changes in fire behavior with changes in fuels weather or topography. Identify where and when the fire will arrive at any of these "big change" influences: Wind shifts, slope reversal, alignment, fuel type change.

Surface fire transition to crown possible when eye level winds greater than 8mph

PACK TRAIL FIRE

Operation Period: 10/09/2024 0700 to 10/10/2024 0700

SAFETY MESSAGE

Crew Safety Is Dependent Upon Competent And Confident Leadership

Every Incident Supervisor Has The Responsibility To Confirm That Safe Practices Are Known And Observed

- TAKE CHARGE of assigned resources
- MOTIVATE crew members with a "can do" safety attitude
- DEMONSTRATE INITIATE by taking appropriate action in the absence of orders
 - COMMUNICATE by giving specific instructions and asking for feedback
 - SUPERVISE at the scene of the action

MAJOR HAZARDS AND RISKS

STEEP TERRAIN	ROLLING MATERIAL	HEAVY EQUIPMENT
FIRE BEHAVIOR	DEHYDRATION	HAZARD TREES
SPOT FIRES	DRIVING	COMPLACENCY

Be sure all elements of your safety plan are in place prior to engagement

Watch for Rolling Material

Post lookout(s) to warn of rolling material and ignitions below the line.

Consider locating line in a defensible position.

Do you have two escape routes if rolling material ignites fuel below you.

Can you adequately trench the line based on steepness of slope and soil conditions?

Night Operations Hazards

Your ability to maintain your situational awareness at night is compromised by your inability to see hazards and other visual indicators in your work area.

Other challenges faced during night operations:

- · Ability to maintain your orientation
- Difficulty seeing hazards beyond your headlamp
- Difficulty estimating distances
- Inability to use landmarks as reference
- Blowing smoke can increase visual difficulties
- · Logistical support is limited

California Team 10 Safety Officers Jason Danen, Ryan Crean

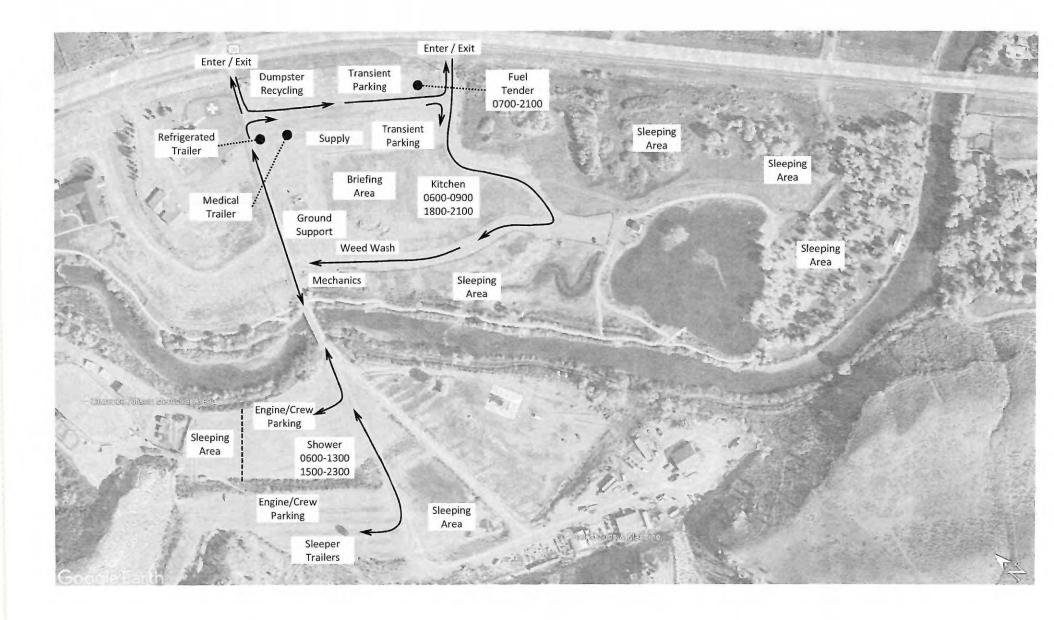

INCIDENT RISK ANALYSIS (ICS 215a)

DIV	HAZARDOUS ACTIONS / CON	ITIONS MITIGATIONS / WARNINGS / REMEDIES
ALL	FIRE BEHAVIOR	 CRITICAL LOW FUEL MOISTURE LOW RELATIVE HUMIDITY Establish and maintain LCES. Take weather observations. Anticipate intense burning and rapid rates of spread. Watch for spot fires. Allow for adequate time to escape routes and safety zone.
ALL	HAZARD TREES	 Follow Hazard Tree Safety Guidelines. Limit number of personnel around snags and their exposure time; fallers must be qualified for trees being fallen. Be especially alert around snags during wind events or changing wind direction. Check for hazard trees & "widow-makers" in sleeping areas prior to using. Maintain Situational Awareness.
ALL	DRIVING HAZARDS	 Drive defensively! Expect the unexpected around every curve. Drive with headlights on; use chock blocks, keep windshields clean; look before backing; and use backers whenever available. Don't drive when fatigued. Adhere to agency driving regulations and guidelines. Be alert for wildlife, heavy trucks, & high-speed opposing and over-taking traffic. School bus stops exist along high-speed roads. Increase following distances on dusty roads. Slow down when you meet opposing traffic or encounter washboard surfaces.
ALL	AIRCRAFT OPERATIONS	 Keep personnel out of drop zones when bucket work in progress. Use air-to-ground frequency to communicate with aircraft. Use clear, concise statements when directing aircraft. Use clock directions from pilot's perspective.
ALL	INDIRECT LINE CONSTRUCT	
ALL	STRUCTURE PROTECTION	Ensure LCES is in place Do not commit to stay on a structure unless the area around the structure represents an adequate safety zone Look for propane tanks and other hazardous materials
ALL	BEAR PRECAUTIONS	 Pick up and remove all trash from fire line. Don't allow storage of food in tents. Manage trash to avoid attracting bears. Grizzly Bears are driven by food this time of year.
ALL	HEAVY EQUIPMENT/DOZERS	 Utilize appropriate PPE and other equipment safety mechanisms. Maintain safe working distances. Utilize observer or spotter. Ensure the use of effective communication (radio, hand signals). Identify hazards. Avoid moving parts
ALL	COMMUNICATIONS	 Share your Situational Awareness (hazards, changes, etc.) to those who also have a need. Answer questions when asked by others. Ask for intel if and when you don't know the plan. Ensure all personnel are familiar with the incident and IA communications plans.

NEEDLES OF FIVE...LEAVE IT ALIVE!

Whitebark Pine (WBP) - A Living Legacy

Facts:

- They typically grow above ~6,500 ft. elevation- on summits, ridges and rocky exposed slopes.
- They are slow growing; cones not produced until ~
 30-60 yrs. The oldest whitebark pine is in Idaho and is >1,270 years old!
- Act as snow fences to hold moisture later in the spring gradually releasing water into the stream systems.
- The seeds are an important food source for wildlife including black bear and the Clark's nutcracker.

Why is this species such a big deal?

 On December 15, 2022, the U.S. Fish and Wildlife Service published a final rule (87 FR 76882) to list the WBP as a threatened species under the Endangered Species Act.

General Information Regarding WBP:

- The Clark's nutcracker, a native bird, can carry up to 30 WBP seeds at a time and cache them up to 10 miles away from harvest site for future food source.
- The four main causes of WBP loss are white pine blister rust, mountain pine beetle attacks, fire exclusion and climate change.
- It is very important that we do our best to protect the remaining WBP. These survivors may contain genetic resistance to the rust that could be critical to the long-term survival of this species.

What Can I Do?

- Learn to identify whitebark pine and its' habitat - <u>teach others</u>.
- Report location information to a botanist –
 collect coordinates/pictures/notes OR try
 Survey123 whitebark pine survey with this
 QR code (or link at bottom of page):

- Find out where 'plus' or 'elite' trees occur (AGOL or botanist) and <u>NEVER</u> cut them down. Protect them from Rx and wild fire.
- Avoid cutting (especially > 4" DBH), damaging (ex: digging/burning w/n 10 m., limbing, etc.) or impeding (ex: piling slash on top of or w/n 10 m.) WBP whenever possible in <u>ALL</u> management activities.
- Avoid constructing helispots or staging equipment, fire camps, vehicles, etc. in occupied whitebark pine habitat.
- Cut other species, such as subalpine fir, in order to help promote the growth and vigor of the existing WBP.

WBP Mature Female Cones

- 5 needles per fascicle (group)
- Needle fascicles clustered on the end of branches
- WBP can easily be confused with lodgepole pine, which can have similar bark, but only 2 needles per fascicle
- Needle clusters on the branches have thicker and more clumpy appearance than lodgepole pine
- Crown is broadly branched and open
- · Thin, gray bark
- Female cones purplish-brown;
 often in groups of 2-5 (3) cones.
