FIRE BEHAVIOR

GENERAL

FDFM 5-7% PIG 40-60% (Shaded/Unshaded)
 LFM: Sagebrush 76-81% Lodgepole 87-97% Subalpine Fir 98% Snowberry 100-110% Grass 94-115%
 1000 Hr 12%
 Spotting distance: .6 miles
 Crown Fire ROS 56 ch/hr

- Expect moderate to dangerous rates of spread with *alignment of slope and wind*. Group torching and spotting can contribute to significant fire growth.
- Grass and sagebrush are carrying fire in the meadows on the southern part of the fire.
- Fire behavior will become active around 1300 and remain active until around midnight. Cloud or smoke shading will moderate fire behavior in affected areas.
- Group torching and crown runs have been observed, with spotting distance greater than ½ mile.
- Very heavy fuel loading in an areas with high mortality. 1000-hour fuels are consuming and contributing to fire load. Fuels are at critical levels. Expect high energy release and extended residence/burn out times.

SPECIFIC

Fuel Type	Flame Length	Crown Fire Flame Length	Max Rate of spread	Spotting Distance	Probability of Ignition
Moderate load dry climate shrubSH2	<5	30	12 ch/hr	.6 mi	60%
High load timber-shrub TU5	<13	49	26 ch/hr	.6 mi	60%
Large downed logs TL7	<4	28	9 ch/hr	.6 mi	60%
Moderate load dry climate grass-shrub GS2	<7	26	57 ch/hr	.6 mi	60%

SAFETY

- Spots can establish rapidly, so escape routes must be short and effective. 4x flame length separation distance minimum. The extremely low fuel moistures can lead to instantaneous and dramatic increases in fire behavior if fuels, weather and topography come into alignment. A small fire can exponentially increase in size and intensity very quickly catching personnel off guard.

Surface fire transition to crown possible when eye level winds greater than 8mph

Fuels and Fire Behavior Advisory

The Entire Great Basin

Valid October 9th – October 23rd, 2024

Subject: Above Normal heat and dryness from mid-September onwards have rapidly dried out both live and dead fuels across the entire region. Fuels which were already at critical levels for most of the summer received only a few days of moistening rainfall, before the current 3-week drying trend pushed fuels in most areas back to critical levels, and in many cases to record levels. Extreme Fire Behavior is now being observed on both existing fires, as well as new and emerging fires across much of the Great Basin.

Discussion: The following conditions are being experienced/observed:

- Overall dryness the past few months has introduced "**Moderate Drought**" to parts of Idaho, and southern areas of Nevada and the Arizona Strip and severe drought to western Wyoming.
- The short-term dryness of the past few weeks has pushed the "**Flash Drought**" indices towards their highest levels across Wyoming and large areas of Idaho, Nevada, Utah and the Arizona Strip.
- Above normal fine fuel loading continues across southern Idaho, and northern Nevada and Utah.
- Live fuel moisture values (sagebrush, pinyon-juniper, gambles oak, mixed conifer) are still well below critical levels, correlating with High to Extreme fire behavior and will continue falling the next 2 weeks.
- October is the windiest time of year, and there have been at least 1-2 strong dry wind events every week, the past month, combining with the near record dry fuels to produce Extreme Fire Behavior.

Difference from Normal Conditions: Live and dead fuel moistures levels are much drier than mid-October normals, near or above mid-summer normals, and setting new records in many cases. The unseasonably warm, dry weather will continue this trend thru the next week or two. High elevation dead & down is extremely dry and contributing to continued large fire growth in timbered higher elevations. In middle to lower elevations sagebrush fuel moisture continues below normal. Above normal fine fuel loading in southern Idaho into northern areas of Nevada and Utah continues to be a significant departure from normal conditions, and when combined with fully cured grasses and critically dry live fuel moisture levels in the brush, can quickly contribute to explosive growth of any new and existing fires during strong wind events.

Concerns to Firefighters and the Public:

- Anticipate flashy fine fuels and sagebrush, pinyon-juniper, gamble oak and mixed conifer to ignite easily and exhibit **advanced rates of spread, elongated flaming fronts and increasing fire brands; expect more long-range spotting, even in absence of slope and wind. You can't out run it!**
- Anticipate dust devils and fire whirls to develop in warm, dry and unstable conditions, especially in fine flashy fuels, that may jeopardize control lines and contribute to erratic fire behavior.
- Expect longer burn periods at mid to higher elevations.
- Fine fuel loadings in some areas are dense and continuous and will support extreme rates of spread.
- Expect regular weekly episodes of strong/dry large scale wind events.

Mitigation Measures:

- Modify tactics to account for potential high rapid rates of spread and high resistance to control.
- Communicate retardant drop effectiveness and modify as necessary; higher coverage levels or altered tactics may be required.
- Park all vehicles in clean, cold black; avoid driving or parking in unburned fuels.
- Ensure solid anchor points – keep one foot in the black.
- Constantly re-evaluate LCES – Lookouts – Communications – Escape Routes – Safety Zones.
- Consult the latest weather and fire danger information at <http://qacc.nifc.gov/gbcc/>

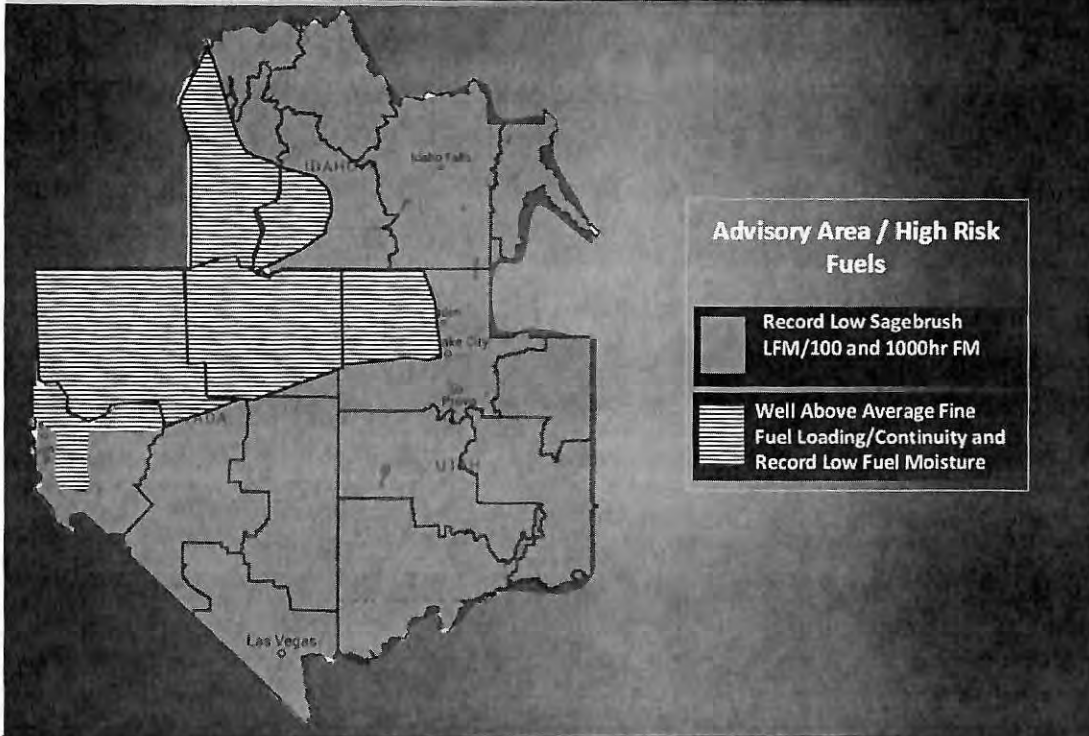

Area of Concern: All areas of the Great Basin.

Operation Period: 10/10/2024 0700 to 10/11/2024 0700

SAFETY MESSAGE

IDENTIFICATION OF EFFECTIVE ESCAPE ROUTES AND SAFETY ZONES

- 1. **OBSERVE**-Personally observe potential safety zones and escape routes in the work area.
- 2. **VISUALIZE**- Build a mental picture of the fire behavior you would expect if conditions existed that would enable a crown fire to burn around your potential safety zone.
- 3. **IDENTIFY**- Compare the fire behavior you visualize with the size and location of potential safety zones you observe in order to identify any true safety zones available.
- 4. **TIME**- Have someone walk and time the route from the work location to the potential safety zone(s).
- 5. **INFORM**- Communicate the location and path of travel to those who work for you and around you.
- 6. **EVALUATE**- You must continually evaluate your escape and safety plan to ensure that it will still work.

MAJOR HAZARDS AND RISKS

STEEP TERRAIN FATIGUE SPOT FIRES	ROLLING MATERIAL DEHYDRATION BUCKET DROPS	HEAVY EQUIPMENT HAZARD TREES COMPLACENCY
--	---	--

Be sure all elements of your safety plan are in place prior to engagement

**Steps To Protect Yourself
From Illnesses**

- Wash your hands often
- Avoid touching your eyes, nose, or mouth, as this will spread germs.
- Try to avoid close contact with sick people
- Practice good health habits. Get plenty of sleep drink plenty of fluids, and eat healthy food
- Cover your nose and mouth with a tissue when you cough or sneeze. Throw the tissue in the trash after you use it
- If you are sick with flu-like illness, separate that person from the rest of your crew and others, seek treatment at the medical unit.

Hazard Tree Felling

Felling a hazard tree requires accurate risk assessment and complexity analysis and demands the sawyer's full situational awareness. In all cases, remember to establish and maintain a secure felling area.

Do not bypass hazard trees without taking some action such as felling or establishing a No-Work-Zone.

Degree of hazard varies with tree size, species, and type/location of defect:

- Stem defects resulting in tree failure
- Weakened sapwood resulting in loss of control when falling trees and limits solid wood for wedging.
- Overhead hazards, i.e., dead or hanging limbs falling on the faller.

California Team 10 Safety Officers Jason Danen, Ryan Crean

INCIDENT RISK ANALYSIS (ICS 215a)

DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES	
ALL	FIRE BEHAVIOR	<ul style="list-style-type: none"> • CRITICAL LOW FUEL MOISTURE • LOW RELATIVE HUMIDITY • Establish and maintain LCES. Take weather observations. • Anticipate intense burning and rapid rates of spread. Watch for spot fires. • Allow for adequate time to escape routes and safety zone. 	
ALL	HAZARD TREES	<ul style="list-style-type: none"> • Follow Hazard Tree Safety Guidelines. • Limit number of personnel around snags and their exposure time; fallers must be qualified for trees being fallen. • Be especially alert around snags during wind events or changing wind direction. • Check for hazard trees & "widow-makers" in sleeping areas prior to using. • Maintain Situational Awareness. 	
ALL	DRIVING HAZARDS	<ul style="list-style-type: none"> • Drive defensively! Expect the unexpected around every curve. • Drive with headlights on; use chock blocks, keep windshields clean; look before backing; and use backers whenever available. • Don't drive when fatigued. Adhere to agency driving regulations and guidelines. • Be alert for wildlife, heavy trucks, & high-speed opposing and over-taking traffic. School bus stops exist along high-speed roads. • Increase following distances on dusty roads. Slow down when you meet opposing traffic or encounter washboard surfaces. 	
ALL	AIRCRAFT OPERATIONS	<ul style="list-style-type: none"> • Keep personnel out of drop zones when bucket work in progress. • Use air-to-ground frequency to communicate with aircraft. • Use clear, concise statements when directing aircraft. Use clock directions from pilot's perspective. 	
ALL	INDIRECT LINE CONSTRUCTION	<ul style="list-style-type: none"> • Establish and maintain LCES. • Locate line in favorable location, lighter fuels and gentler topography when possible. • Utilize natural or existing barriers. • If possible burn out or backfire as line construction progresses. 	
ALL	STRUCTURE PROTECTION	<ul style="list-style-type: none"> • Ensure LCES is in place • Do not commit to stay on a structure unless the area around the structure represents an adequate safety zone • Look for propane tanks and other hazardous materials 	
ALL	BEAR PRECAUTIONS	<ul style="list-style-type: none"> • Pick up and remove all trash from fire line. • Don't allow storage of food in tents. • Manage trash to avoid attracting bears. • Grizzly Bears are driven by food this time of year. 	
ALL	HEAVY EQUIPMENT/DOZERS	<ul style="list-style-type: none"> • Utilize appropriate PPE and other equipment safety mechanisms. • Maintain safe working distances. • Utilize observer or spotter. • Ensure the use of effective communication (radio, hand signals). • Identify hazards. • Avoid moving parts 	
ALL	COMMUNICATIONS	<ul style="list-style-type: none"> • Share your Situational Awareness (hazards, changes, etc.) to those who also have a need. • Answer questions when asked by others. Ask for intel if and when you don't know the plan. • Ensure all personnel are familiar with the incident and IA communications plans.

NEEDLES OF FIVE...LEAVE IT ALIVE!

Whitebark Pine (WBP) – A Living Legacy

Facts:

- They typically grow above ~6,500 ft. elevation- on summits, ridges and rocky exposed slopes.
- They are slow growing; cones not produced until ~ 30-60 yrs. The oldest whitebark pine is in Idaho and is >1,270 years old!
- Act as snow fences to hold moisture later in the spring gradually releasing water into the stream systems.
- The seeds are an important food source for wildlife including black bear and the Clark's nutcracker.

Why is this species such a big deal?

- On December 15, 2022, the U.S. Fish and Wildlife Service published a final rule (87 FR 76882) to list the WBP as a threatened species under the Endangered Species Act.

General Information Regarding WBP:

- The Clark's nutcracker, a native bird, can carry up to 30 WBP seeds at a time and cache them up to 10 miles away from harvest site for future food source.
- The four main causes of WBP loss are white pine blister rust, mountain pine beetle attacks, fire exclusion and climate change.
- It is very important that we do our best to protect the remaining WBP. These survivors may contain genetic resistance to the rust that could be critical to the long-term survival of this species.

What Can I Do?

- Learn to identify whitebark pine and its' habitat - teach others.
- Report location information to a botanist – collect coordinates/pictures/notes OR try Survey123 whitebark pine survey with this QR code (or link at bottom of page):

- Find out where 'plus' or 'elite' trees occur (AGOL or botanist) and **NEVER** cut them down. Protect them from Rx and wild fire.
- Avoid cutting (especially > 4" DBH), damaging (ex: digging/burning w/n 10 m., limbing, etc.) or impeding (ex: piling slash on top of or w/n 10 m.) WBP whenever possible in **ALL** management activities.
- Avoid constructing helispots or staging equipment, fire camps, vehicles, etc. in occupied whitebark pine habitat.
- Cut other species, such as subalpine fir, in order to help promote the growth and vigor of the existing WBP.
