Spotting distance: .4 miles Crown Fire ROS 65 ch/hr

- Expect moderate to dangerous rates of spread with alignment of slope and wind. Group torching and spotting
  can contribute to significant fire growth.
- Grass and sagebrush are carrying fire in the meadows on the southern part of the fire.
- Fire behavior will become active around 1300 and remain active until around midnight. Cloud or smoke shading will moderate fire behavior in affected areas.
- Group torching and crown runs have been observed, with spotting distance greater than ½ mile.
- Very heavy fuel loading in areas with high mortality. 1000-hour fuels are consuming and contributing to fire load.
   Fuels are at critical levels. Expect high energy release and extended residence/burn out times.

# Lookouts Communications Escape Routes Safety Zones

#### **PACK TRAIL FIRE**

Operation Period: 10/15/2024 0700 to 10/16/2024 0700

#### **Emphasis on Anticipating Problems**

#### Ask yourself "What Can Go Wrong"

- Identify the critical elements of your plan, and ask "what if" a loss of one of these elements occurs
- Develop a plan to deal with the problem before it occurs
- Communicate the plan to all of your personnel
- Validate the new plan to ensure it matches the current situation

#### **MAJOR HAZARDS AND RISKS**

GRIZZLY BEARS	DRIVING	HAZARD TREES
CHIPPING OPS	DEHYDRATION	HUNTING SEASON
FATIGUE	SHADOW DAY	COMPLACENCY

Be sure all elements of your safety plan are in place prior to engagement

#### Your Safety Responsibilities:

Set the example of SAFETY!

Ask questions about SAFETY!

Follow all Policy on SAFETY!

Expect nothing but SAFETY from everyone!

Think about **SAFETY** in everything you do!

You are a SAFETY officer!

#### Complacency

Don't let boredom lead to complacency.

Always remain focused on the task at hand and stay alert for changing conditions.

It is easy to fall into a routine and lose sight of all that is around us.

California Team 10 Safety Officer Jason Danen

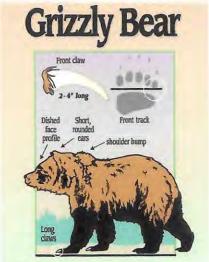

#### **How to minimize Your Risk in Bear**

#### Country

- 1. Carry an accessible bear spray and know how to use it.
- 2. Hike in groups of three or more.
- Make noise to avoid startling a bear (i.e. singing, yelling, clapping), especially in areas where you can't hear well or see very far.
- 4. Be alert to your surroundings
- If you do see a bear, maintain at least 100 yds between the bear and yourself.
- Keep all bear attractants (e.g. food, coolers, backpacks, anything with a scent) with you or properly secured at all times.
- 7. Take note of bear sign (e.g. tracks, bear scat, ripped apart logs).
- Avoid carcasses (often identified by groups of ravens and magpies) and other seasonal food sources (e.g. berry patches).

#### What you should know about Bear Spray

Carry Bear Spray and Know How to Use it!

Bear spray is one of the last tools in your toolbox. It should not provide a false sense of security.

Know how to use your bear spray. Practice using bear spray before you go hiking, so you know what to do when the time comes.

Practice pulling the canister out of its holster and removing the safety on the trigger, but be careful to not discharge it.

Have your bear spray ready. Keep your bear spray on a belt holster or on a chest holster at all times. Never keep it in your back-

pack while hiking—you won't be able to reach it in time if a bear charges or attacks you.

When a bear attacks or charges you, spray a cloud between you and the bear, and be ready to spray multiple times or empty the can.

How to use: Spray at close range, about 20-30 feet away, at a slight downward angle in front of the bear's head.

Spray until the bear's behavior changes.

You should be cautious when handling and transporting bear spray and leave the safety on until you are ready to use

Never leave a bear spray in a hot vehicle or exposed to the hot sun for long periods of time.

Strong winds will affect spray distance and direction. Snow, rain, and cold weather will decrease spray distance.

Always be up wind if possible.

#### NEEDLES OF FIVE...LEAVE IT ALIVE!

#### Whitebark Pine (WBP) – A Living Legacy

#### Facts:

- They typically grow above ~6,500 ft. elevation- on summits, ridges and rocky exposed slopes.
- They are slow growing; cones not produced until ~ 30-60 yrs. The oldest whitebark pine is in Idaho and is >1,270 years old!
- · Act as snow fences to hold moisture later in the spring gradually releasing water into the stream systems.
- The seeds are an important food source for wildlife including black bear and the Clark's nutcracker.

#### Why is this species such a big deal?

• On December 15, 2022, the U.S. Fish and Wildlife Service published a final rule (87 FR 76882) to list the WBP as a threatened species under the Endangered Species Act.

#### General Information Regarding WBP:

- The Clark's nutcracker, a native bird, can carry up to 30 WBP seeds at a time and cache them up to 10 miles away from harvest site for future food source.
- The four main causes of WBP loss are white pine blister rust, mountain pine beetle attacks, fire exclusion and climate change.
- It is very important that we do our best to protect the remaining WBP. These survivors may contain genetic resistance to the rust that could be critical to the long-term survival of this species.

#### What Can I Do?

- · Learn to identify whitebark pine and its' habitat - teach others.
- Report location information to a botanist collect coordinates/pictures/notes OR try Survey123 whitebark pine survey with this QR code (or link at bottom of page):

- · Find out where 'plus' or 'elite' trees occur (AGOL or botanist) and NEVER cut them down. Protect them from Rx and wild fire.
- Avoid cutting (especially > 4" DBH), damaging (ex: digging/burning w/n 10 m., limbing, etc.) or impeding (ex: piling slash on top of or w/n 10 m.) WBP whenever possible in ALL management activities.
- · Avoid constructing helispots or staging equipment, fire camps, vehicles, etc. in occupied whitebark pine habitat.
- · Cut other species, such as subalpine fir, in order to help promote the growth and vigor of the existing WBP.

**WBP Mature Female Cones** 

Fascicles at Branch Ends

- 5 needles per fascicle (group)
- · Needle fascicles clustered on the end of branches
- WBP can easily be confused with lodgepole pine, which can have similar bark, but only 2 needles per fascicle
- Needle clusters on the branches have thicker and more clumpy appearance than lodgepole pine
- Crown is broadly branched and
- · Thin, gray bark
- Female cones purplish-brown; often in groups of 2-5 (3) cones.

FOR A NON-EMERGENCY INCIDENT, WORK THROUGH CHAIN OF COMMAND TO REPORT AND TRANSPORT INJURED PERSONNEL AS NECESSARY.

FOR A MEDICAL EMERGENCY: IDENTIFY ON SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.

Use the following items to communicate situation to communications/dispatch.

- 1. CONTACT COMMUNICATIONS / DISPATCH (Verify correct frequency prior to starting report)
  - Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."
- 2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure.
