Incident: Stockade Canyon

Short Crown Runs Group Torching Short-range Spotting

Narrative:

The fire is actively burning in pockets of Juniper and moderate sage, making short uphill runs when the winds align with topography

 Primary Fuel Model, Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc):

Brush (2 feet)

Timber (Grass and Understory)

Narrative:

Grass, Sagebrush, and Juniper

30. Damage Assessment Information (summarize damage and/or restriction of use or availability to residential or commercial property, natural resources, critical infrastructure and key resources, etc):

3 Primary Residences 2 miles to the East of the Stockade fire eastern progression. HWY 447 could be Possibly impacted within the next 48 to 72 hours.

A. Structural Summary	B. # Threatened (up to 72 hrs)	C. # Damaged	D. # Destroyed

Q. Area Closure

36. Projection	ted Incident Activity, Potential, Movement, Escalation, or Spread and influencing factors during the next al period and in 12-, 24-, 48-, and 72-hour time frames:
12 hours:	
24 hours:	
48 hours:	
72 hours:	
Anticipate	d after 72 hours: be diminishing
SELECTION A	

37. Strategic Objectives (define planned end-state for incident):

Full Suppression utilizing approved tools within the WSA. Minimize acres burned in Primary and General Sage grouse habitat. Protect identified cultural and historic resources in the fire area. Prevent fire spread into adjacent jurisdiction and populated areas.

- 38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:
- 12 hours: Critical Priority and General Sage grouse habitat threatened as well as several LEKs. Historic structures threatened

24 hours: Critical Priority and General Sage Grouse habitat threatened as well as several LEKs. Historic

Incident: Stockade Canyon

structures threatened

There are multiple residence, transmission lines, and HWY 447 that are within 2 miles of the fire. Critical Priority and General Sage grouse habitat threatened as well as several LEKs.

Any fire spread into the Granite Mountains east of Hwy447 needs to be kept west of the

72 hours: ridgetop in order to protect Lahontan Cutthoat trout (T&E) recovery streams on the east side of the mountains.

Threat may diminish as containment objectives are met and forward progress is

Anticipated after 72 hours: slowed. If fire makes it into HWY 447 corridor, threat will remain elevated in this
area.

- 39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:
- 12 hours: Critical needs for 2 Line Safety, 2 Divisions and or 2 Task Force Leaders, and 1 Rado.
- 24 hours: Continued need for crews and aerial support with bucket work from helicopters and logistical needs
- 48 hours: Continued need for crews and bucket work from helicopters, and logistical needs
- 72 hours: Continued need for crews and bucket work from helicopters, and logistical needs

Anticipated after 72 hours: Expect to begin maintaining current resources as containment objectives are

- 40. Strategic Discussion: Explain the relation of overall strategy, constraints, and current available information to:
- 1) critical resource needs identified above,
- 2) the Incident Action Plan and management objectives and targets,
- 3) anticipated results.

Explain major problems and concerns such as operational challenges, incident management problems, and social, political, economic, or environmental concerns or impacts.

Operational challenges are accessibility due to fire burning in WSA. Access is very limited to vehicles. Fires in this area always require a heavy handcrew commitment and aircraft to support the crews working the fire. Aircraft are needed to support crews both tactically and logistically on a daily basis. Also needed for emergency evac if needed of personnel. Ground travel times out of the WSA from the fire location are in excess of 1.5 hrs just to get to pavement. Fires in this area typically last 5-7 days and require a lot of mop-up due to the juniper component.

41. Planned Actions for Next Operational Period:

Contine using direct and indirect tactics with hand Crews supported by aircrafts, limit fire spread to the North and East utilizing changes in fuels and terrain and cherry-stem roads within the WSA. Limit fire spread to the south and west by reinforcing the heel and flanks. Taking advantage of burnout opportunities to further limit fire growth to the north.

- 42. Projected Final Incident Size/Area (use unit label e.g., "Acres", "Square Miles"):
- 43. Anticipated Incident Containment or Completion Date: 08/08/2024
- 44. Projected Significant Resource Demobilization Start Date: 08/08/2024
- 45. Estimated Incident Costs to Date: \$5,000,000.00
- 46. Projected Final Incident Cost Estimate: \$7,000,000.00
- 47. Remarks (or continuation of any blocks above list block number in notation):
- 49. Resources (summarize resources by category, kind, and/or type; show # of resources on top ½ of box, show # of personnel associated with resource on bottom ½ of box):
