SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time

MAJOR HAZARDS AND RISKS	
<ul style="list-style-type: none"> • Extreme fire behavior potential • Dehydration Heat Related Injuries—Drink lots of water • Potential for fast moving fire with long range spotting..... Ensure LCES in place • Snags 	<ul style="list-style-type: none"> • Driving narrow dusty roads • Bees and insect bites • Steep Rocky Terrain • UTV/ATV use (Helmets and carded) • Slips, Trips, Falls • Weather Events

Safety Spotlight: Sleep

Delta sleep Also known as slow-wave sleep, this is the deepest stage of sleep. It's characterized by slow, high-amplitude brain waves called delta waves, which have a frequency of 0.5 to 3 or 4 Hz. Delta sleep helps the body build and repair muscles, bones, and tissue, and it may also improve cognitive function.

REM sleep...

also called dream sleep. What I call the subconscious playground. REM literally means "Rapid Eye Movement" indicating that in your 'sleep' your brain is still processing. Some of this processing is healthy...good...normal. Necessary even. REM sleep is GOOD. Excessive periods of REM sleep influenced by subconscious thoughts that take us to the 'light sleep' mode prevent people from getting the Delta sleep...the deep restorative sleep we need. You cant shut off your subconscious completely but you can help it. Try to create a healthy sleep environment. Cool/comfortable temperatures, clean linen, reduce noise and lights, avoid social media notifications, don't sleep with music or the TV on...etc. Most importantly...work to clear your thoughts and process any troubling mental activity prior to sleeping.

last tip for the day...regulate caffeine intakes of ALL type so that your body is free of caffeine prior to sleeping. You may still be able to sleep (even if its out of sheer exhaustion) with caffeine in your bloodstream, but caffeine also blocks or inhibits your brain chemistry so that while you may be 'asleep', your brain isnt benefitting from the sleep because the adenosine receptors in your brain are still being impacted.
