# FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 14

TYPE OF FIRE: Wildfire

FIRE NAME: Yellow Lake

OPERATIONAL PERIOD: 5 DAY

DATE ISSUED: 10/21/2024

TIME ISSUED: 1800

UNIT: UT-UWF

SIGNED: Dennis Burns /s/

## INPUTS

“Warming and Drying”

WEATHER SUMMARY:

SEE IAP FORECAST FOR CURRENT WEATHER

## FIRE BEHAVIOR

### GENERAL:

No forward fire progression is expected. Pockets of heavier fuels under dense canopy will continue to burn and there will be some single tree torching. Both the aspen stands and the grassy meadows will not carry fire and will serve as a barrier to fire spread.

Expect to see more visible smokes over the coming days as the effects of the moisture diminish. The highest potential for spotting will be rollout along Iron Mine Rd. otherwise there is a very low potential for spotting. The POI could reach as high as 60% by the end of the week.

### SPECIFIC:

**Northside:** There are multiple heat signatures visible on the IR. There will be some torching trees but spotting should not be an issue. Expect mainly smoldering and creeping fire behavior under dense canopy stands of conifer. With the warmer and drying more visible flaming should be expected.

**Southside:** No forward fire progression is expected. Very little heat is showing on the IR and what is showing is well interior. An occasional torching tree is possible.

**IA:** Any new starts will have a very low growth potential and will be easily handled by ground forces.

**AIR OPERATIONS:** With relatively clear skies no anticipated weather effects to air operations.

### SAFETY

- With the precipitation received expect fire weakened trees to fall more readily.

## Kinds of fatigue and different stages.

### **Objective – Mental (Cognitive\*)**

- Reduced cognitive functioning and mental capacity.

### **Physical**

- Reduced bodily functioning and physical exhaustion.

### **Subjective – Symptomatic (Boredom\*)**

- Feelings of tiredness, sleepiness, drowsiness

- › The first step toward becoming a good decision maker on the fire line is to recognize that fatigue hampers your ability to make appropriate decisions - fatigue affects everyone. Fatigue has an impact on risk taking.
- › Studies that focus on how lack of sleep affects work performance during long shifts agree for people to perform well they should average one hour of sleep for every 2 hours of work.
- › Breaks are a hedge against fatigue. Fatigue can rapidly overtake you. Breaks of 5 to 10 minutes or more can keep performance from declining. The number and length of breaks should increase after 8 hours, because fatigue builds through-out a shift.

Are we in a routine situation?

Are we fatigued to the point where we think everything is routine?

Are we dismissive to a hazard later in the season that we would give more attention to earlier in the year?

What can we control currently?

**“Be purposeful and don’t allow yourself and others around you to simply fall into automatic responses without pausing long enough to really take a hard look at the situation. Stay engaged!”**
