# FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 14	TYPE OF FIRE: Wildfire
FIRE NAME: Yellow Lake	OPERATIONAL PERIOD: 5 DAY
DATE ISSUED: 10/21/2024	TIME ISSUED: 1800
UNIT: UT-UWF	SIGNED: Dennis Burns /s/

## INPUTS

“Warming and Drying”

### WEATHER SUMMARY:

SEE IAP FORECAST FOR CURRENT WEATHER

## FIRE BEHAVIOR

### GENERAL:

No forward fire progression is expected. Pockets of heavier fuels under dense canopy will continue to burn and there will be some single tree torching. Both the aspen stands and the grassy meadows will not carry fire and will serve as a barrier to fire spread.

Expect to see more visible smokes over the coming days as the effects of the moisture diminish. The highest potential for spotting will be rollout along Iron Mine Rd. otherwise there is a very low potential for spotting. The POI could reach as high as 60% by the end of the week.

### SPECIFIC:

**Northside:** There are multiple heat signatures visible on the IR. There will be some torching trees but spotting should not be an issue. Expect mainly smoldering and creeping fire behavior under dense canopy stands of conifer. With the warmer and drying more visible flaming should be expected.

**Southside:** No forward fire progression is expected. Very little heat is showing on the IR and what is showing is well interior. An occasional torching tree is possible.

**IA:** Any new starts will have a very low growth potential and will be easily handled by ground forces.

**AIR OPERATIONS:** With relatively clear skies no anticipated weather effects to air operations.

### SAFETY

- With the precipitation received expect fire weakened trees to fall more readily.

## TAKE CARE OF YOURSELF!

**Fatigue, Dehydration, and Personal Health** Chronic fatigue, dehydration, inadequate nutrition, and poor personal hygiene are additive factors leading to poor individual performance, situational awareness, and decision making.

**Accumulated (chronic) Fatigue** is defined as fatigue from which normal rest does not produce recovery. It is often caused by extended periods of stress/work with inadequate recovery periods. It affects your ability to make decisions, slows your reaction time, can cause errors in judgment, increases forgetfulness, and reduces productivity. You may also experience:

- Decreased motivation/low morale
- Increased irritability and depression
- Extreme emotional responses
- Confused, poor problem solving
- Poor attention/decisions
- Poor concentration/memory

**The most effective remedy is a good night's sleep. 2:1 work rest – max. sleep during rest.**

**Dehydration** can cause rapid heart rate, weakness, excessive fatigue, and dizziness. Drink water with sports drinks (2 or 3 to 1) before, during, and after work. Drink at least 1 quart per hr. (1-2 when engaged in arduous tasks). If you experience signs of dehydration:

**Let your supervisor know before more serious conditions develop.**

**Nutrition** – Not usually a problem on fire assignments but you are now on per diem for meals.

**Eat well-balanced meals with energy supplements during high exertion periods.**

**Hygiene** – Poor personal hygiene can result in illness and transmission of illness to others.

**Wash hands often (especially before eating), cover coughs and sneezes, don't share food/drinks, keep warm and dry.**

## WORKING WITH HEAVY EQUIPMENT

- Stay at least 100 ft. in front and 50 ft. behind equipment.
- Only the operator should ride on the equipment
- Do not approach until you have eye contact with operator, implements are lowered to ground, and equipment is idled down.
- Avoid downhill areas reachable by rolling material.
- Establish visual and radio communication methods prior to engaging.
- Communicate all hazards to the operator.
