FIRE BEHAVIOR

GENERAL: The majority of the fire is at present in a backing alignment and with the absence of any wind event, expect slow to moderate rates of spread. Spotting will be short range from torching trees and rollout. Expect active burning from about noon until sundown. Areas of grass and sage are struggling to carry fire in the absence of wind and often will not support fire after dark. Single and group tree torching will continue and short intense crown runs were timber, slope and wind align are probable. With multiple steep narrow drainages there is the potential for fire whirl development.

Aspen groves are starting to carry surface fire with minimal flame lengths.

SPECIFIC:

Branch XX: Highest potential for fire growth will be north of Hwy35 and along the North Fork of the Duchesne River. Expect active backing with short range spotting and rollout. With clear air and battling winds watch for fire whirl development.

Branch V: Div H The fire will continue burning to the NE expect multiple group tree torching and the potential for crown fire with spotting up to 1/4mile. All other divisions minimal fire growth is expected in the absence of any wind. Torching and short range spotting will continue in timber stands.

Night: Minimal forward fire progression expected. Expect pockets of timber above the inversion to continue to burn actively. Below the inversion jackpots of dead and down will continue to burnout.

IA: Any new starts that are in alignment with wind slope have the potential exceed the capabilities of ground forces without air support in the timber. Ensure you have a good anchor point before engaging.

AIR OPERATIONS: Westside of the fire good flying conditions by 1000hrs. Eastside the inversion is forecasted to mix out by 1200hrs some drainages may clear out sooner.

SAFETY

- Multiple fuel factors are present that can contribute to large fire growth including heavy loading of dead and down material, bug kill and unusually low live and dead fuel moisture. Review Page 36 of the IRPG.
- In aspen groves with very little fire disturbance expect multiple snags to fall.

SAFETY MESSAGE

Firefighter safety comes first on every fire, every time!

Ask Yourself "What Can Go Wrong?"

- ✓ Identify the critical elements of your plan. Ask "what if" a loss of one of these elements occurs?
- ✓ Identify the weak link in the plan. Where do you expect a problem?
- ✓ Develop a plan to deal with the problem(s) before they occur.
- ✓ Communicate the plan to all your personnel.
- ✓ validate the new plan to ensure it matches the current situation.

MAJOR HAZARDS AND RISKS

- STEEP TERRAIN
- FATIGUE
- ROLLING MATERIAL
- DEHYDRATION
- HEAVY EQUIPMENT
- HAZARD TREES
- COMPLACENCY

Resource Protection Standards

Engineering and Roads

- Do not track heavy equipment on paved roads without the proper mitigations (ie. street grousers, rubber mats, etc.).
- Use caution using bridges on private property – they are often not load-rated.
- If any road issues or concerns are encountered, please contact a REAF.

Dozer Lines

- Refrain from constructing dozer line within 50 feet parallel to streams and rivers; Tying into streams and rivers and/or crossing streams and rivers is acceptable.

Heritage & Cultural

All cultural resources and human remains are protected. **Please leave them in place - no collecting.** Call a Resource Advisor if cultural resources like arrowheads, flakes/chips, modified trees (such as blazes or peels) or historic artifacts like cans & bottles are found and they will investigate. This area also has a rich logging and mining history and there may also be larger features related to those activities (prospecting pits, slag piles, wooden structures, metal machinery, sawdust piles, etc.).

Noxious Weeds

- Noxious weeds: musk thistle: avoid activities that would disperse thistle
- Wash Stations: Please use weed wash stations before and after assignment for vehicles and equipment

Water Quality and Fisheries

WHIRLING DISEASE: Whirling Disease is present in both the North Fork of the Duchesne and Rock Creek.

- Avoid moving water from one drainage to another.
- Avoid taking water out of known tainted water and dumping into "live" water.
- Disinfect equipment fully and completely before moving into non-Whirling Disease positive waters.

Minerals/Mining and Geology

- Be aware and use caution around mining operations in Blind Stream and Iron Mine Creek Areas.
- **Sinkholes – use caution around sink holes in soapstone or limestone areas; Some can be very large.**
