Incident Action Plan France Canyon Fire

UT-DIF-000223 P4 S2QS (0407)

HEALTH & SAFETY MESSAGE:

Extreme Fire Behavior

- Establish "Trigger Points" to re-evaluate the situation and associated risks.
- Establish LCES.
- Use "Risk Management" approach prior to initiating suppression actions.
- Be alert for increased fire behavior.
- Expect short and long-range spotting.
- Consider aerial supervision during times of high fire activity.

Safety Officers: Randy Turrill, Brian Burbridge, Brian Frisby

Color Country Incident Management Team 1
Dameon Julander, Incident Commander
Dave Harmon, Incident Commander (T)

Incident Weather Forecast

FORECAST NO: 2

PREDICTION FOR SHIFT DATE: 6/19/2025

FORECAST ISSUED: 1800 6/18/2025

NAME OF FIRE: France Canyon

UNIT: UT-DIF-000223
SIGNED: Audrew Gorelow

Incident Meteorologist: Andrew Gorelow

Contact: (240)778-5302 andy.gorelow@noaa.gov

WEATHER DISCUSSION: ***RED FLAG WARNING FOR GUSTY SW WINDS AND LOW RH***

High pressure over the region will break down as an area of low pressure moves into the Pacific Northwest. As this occurs, southwest winds will increase across the region this afternoon with gusts to around 30 mph, with higher gusts possible in more exposed areas. These winds combined with RHs dropping to around 10 percent will lead to widespread **RED FLAG** conditions this afternoon. For this morning, expect to see the thermal belt around 9000 feet and with the inversion breaking mid to late morning with the mixing height rising to around 11,000 feet. Gusty southwest winds will occur again Friday and Saturday with afternoon southwest gusts around 40 mph. The RED FLAG WARNING will continue through 2200 Saturday. No precipitation is expected through the weekend.

WEATHER FORECAST FOR TODAY (THURSDAY):

WEATHER: Sunny. Increasing southwest winds in the afternoon. RED FLAG starting at 1200.

CHANCE OF WETTING RAIN: 0% CHANCE OF LIGHTNING: 0%

20 FT WINDS: Drainage winds 3-5 mph in the morning becoming southwest 10-20 mph after 1200 with

gusts to around 30 mph, especially in the more exposed areas.

MAX TEMPERATURE (8500 FT): 82-87 degrees

MIN HUMIDITY (8500 FT): 8-13% MIXING HEIGHT: 11,000 feet.

TRANSPORT WINDS: South 15-20 mph in the morning, southwest 25-35 mph in the afternoon.

THURSDAY NIGHT:

WEATHER: Clear with haze/smoke.

CHANCE OF WETTING RAIN: 0% CHANCE OF LIGHTNING: 0%

20 FT WINDS: Evening southwest winds 15-20 mph with gusts to around 35 mph, decreasing to 10-15

mph with gusts around 20 mph.

MIN TEMPERATURE: 53-58 degrees

MAX HUMIDITY: 17-22%

INVERSION: Inversion possible in deeper canyons, but most of the fire should remain well mixed.

FRIDAY:

WEATHER: Sunny and Windy with **Red Flag Conditions**.

CHANCE OF WETTING RAIN: 0% CHANCE OF LIGHTNING: 0%

20 FT WINDS: South 5-10 mph through 1200, then becoming southwest 10-20 mph with occasional gusts

to around 35 mph.

MAX TEMPERATURE (8500 FT): 82-88 degrees

MIN HUMIDITY (8500 FT): 8-12%

MIXING HEIGHT: 9000 feet.

TRANSPORT WINDS: Southwest 10-20 mph, increasing to southwest 30-35 mph after 1200.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER:03	TYPE OF FIRE: Wildland
FIRE NAME: France Canvon	OPERATIONAL PERIOD: 06/19/2025, Day Shift
DATE ISSUED: 06/18/2025	TIME ISSUED: 1800
UNIT: Dixie National Forest / Powell RD	SIGNED: /s/ Kim Soper

INPUTS

FUEL ASSUMPTIONS: The major fuel types found in and around the fire area are very high load timber/ shrub fuels. The primary carrier of the fire will be heavy forest litter with a shrub (manzanita) and moderate to high jackpot fuels. Observed spread rates and flame lengths are high to extreme in most fuel types in the fire area. The large-scale fuel drying trend will continue throughout the month of June as it is the dryest month for moisture for the fire area.

<u>Fuel Receptiveness</u>: The area ERC level is above normal for this time of year. Forecasted levels will hit the 80th percentile within the next few days and the ERC level is forecasted to continue to rise well above the 90th percentile with forecasted hot dry weather conditions by the end of the month. The probability of ignition is very high.

<u>Dryness</u> - Fuel moistures (Fuel samples collected around the fire area on 6/01) :10 hour – 4%,100 hour -7,1000 hour – 8%, Duff – 6%, Ponderosa Pine – 85%, Manzanita shrub – 81%, Bitter Brush – 95%, and Juniper – 66%

Fuel moisture will continue to decrease each day due to the hot dry weather forecast for the next ten days.

WEATHER SUMMARY (For Specifics, please see the attached Incident Weather Forecast).

DISCUSSION: Red flag warning for gusty southwest winds and low Relative humidity.

WEATHER: Sunny

MAX TEMP: 82 to 87° MIN RH: 8-13%

20 FOOT WINDS: southwest 10 - 20 mph, gusts 35 mph

CHANCE OF WETTING RAIN (≥ 0.10"): 0%, Chance of Precipitation: 0%, MIXING HEIGHT: 11,000

OUTPUT

FIRE BEHAVIOR

Fire behavior will be extremely active today because of the red flag conditions. Expect very active surface spread with tree torching and a high potential for short to long range crown runs with long range spotting. Spots will transition quickly to very active surface burning. There will be very high heat intensity development mainly due to continued hot dry forecasted weather for the next three days.

General

RED FLAG WARNING FROM NOON THURSDAY THROUGH 2200 SATURDAY

Both rates of spread and fire intensities expected today will compromise control of the fire with any uncontrolled fire. Extreme caution will need to be taken to assure Firefighter safety.

Division A: Fire behavior will continue to be very active within this division. Expect fire activity to range from an active surface burn with up to 7-foot flame lengths, isolated tree torching and some upslope short range crown runs when the wind and/or slope come into aliment.

Division R and Z: The expected winds should be an asset in securing this portion of the fire perimeter. Expect creeping smoldering in areas that have been burned out along control lines. Interior to control lines you can expect extreme surface burning, tree torching and some crown runs in unburned islands.

Division M: In the spots from Monday's crown run with control lines will be active today with surface burning and creeping and smoldering conditions. If any uncontrolled spots become active you can expect to see strong surface burning, group tree torching and some short to long range crown activity.

All readings are using the daily worst-case scenario.

Timber Litter

Maximum Rate of Spread: 1000 - 1500 ft / hr Maximum surface spread flame length: 5 - 7 feet Maximum Spotting Distance: 0.4 Miles, 2000 to 2500 feet Probability of Ignition: 75 - 85%

SAFETY

We should never be surprised by the fire behavior! Take weather observations frequently. Base all actions on current and expected fire behavior!

Always establish your LCES.

A MOMENT FOR SAFETY CAN LAST A LIFETIME.

The items listed here are considered consumable. Replacement requests for these parts should be filled at the Incident Supply Unit or Local Cache and marked off. If the order is unable to be filled it should be sent to Ordering for S# assignment and sent to a Buying Team or purchasing support for the incident acquisition, or provided to the requesting resource for fill at the home unit.

Items highlighted in gray should be fillable at most cache locations.
