France Canyon Fire

UT-DIF-000223 P4 S2QS (0407)

HEALTH & SAFETY MESSAGE:

In a fire situation there are subjective hazards that we as firefighters create. There are objective hazards such as fire behavior, snags, rolling debris, and terrain that are inherent to firefighting.

The subjective hazards we have control over just by using our attitudes and abilities. The objective hazards we cannot eliminate. The possibility of injury or entrapment is always there. The probability may be large or small.

By using a set procedure each operational period we can minimize exposure to hazards, and better ensure our safety, by taking the following steps:

- **Determine the assignment.**
- **Identify the hazards.**
- **Analyze the risk (probability vs. severity).**
- **Implement steps to ensure safety. Are controls in place for identified hazards?**
- **Re-analyze the situation as it changes.**

INPUTS

FUEL ASSUMPTIONS: The major fuel types found in and around the fire area are very high load timber/ shrub fuels. The primary carrier of the fire will be heavy forest litter with a shrub (manzanita) and moderate to high jackpot fuels. Observed spread rates and flame lengths are high to extreme in most fuel types in the fire area. The large-scale fuel drying trend will continue throughout the month of June as it is the driest month for moisture for the fire area.

Fuel Receptiveness: The area ERC level is above normal for this time of year. Forecasted levels will hit the 80th percentile within the next few days and the ERC level is forecasted to continue to rise well above the 90th percentile with forecasted hot dry weather conditions by the end of the month. The probability of ignition is very high.

Dryness - Fuel moistures (Fuel samples collected around the fire area on 6/01) :10 hour – 4%,100 hour -7 ,1000 hour– 8%, Duff – 6%, Ponderosa Pine – 85%, Manzanita shrub – 81%, Bitter Brush – 95%, and Juniper – 66%

Fuel moisture will continue to decrease each day due to the hot dry weather forecast for the next ten days.

WEATHER SUMMARY (For Specifics, please see the attached Incident Weather Forecast).

OUTPUT

FIRE BEHAVIOR

Fire behavior will be extremely active today because of the red flag conditions. Expect very active surface spread with tree torching transiting to long range crown runs with long range spotting. Spots will transition quickly to very active surface burning. There will be very high heat intensity development and extremely rapid rates of spread in any uncontrolled fire areas.

General

RED FLAG WARNING FROM NOON THURSDAY THROUGH 2200 SATURDAY

The weather is only getting hotter, dryer and windier the next two days. Both rates of spread and fire intensities will increase and compromise control of the fire. Extreme caution will need to be taken to assure Firefighter safety.

Division A: Fire behavior will continue to be extremely active today. Expect fire activity to range from active surface burning, multiple tree torching, and long-range crown runs when the wind and/or slope come into alignment.

Division R and Z: The forecasted winds will be an asset in securing this portion of the fire perimeter. Expect creeping smoldering in areas that have been burned out along control lines. Unburned interior islands will continue to be active with surface burning and some single tree torching.

Division M: With control lines in place expect surface burning, creeping and smoldering conditions. If any uncontrolled spots become active you can expect to see strong surface burning, group tree torching and some short to long range crown activity.

Division C and K: There is a high probability that the head of the fire will push into these divisions today or tomorrow. Expect extreme fire behavior with rapid rates of spread, long-range spotting and long-range crown runs.

All readings are using the daily worst-case scenario.

Timber Litter

Maximum Rate of Spread: **surface spread 1500 - 2000 ft / hr – Crown runs 1 – 2 miles / hr**

Maximum surface spread flame length: **7 - 10 feet**

Maximum Spotting Distance: **0.5 Miles, 2700 to 3500 feet**

Probability of Ignition: **80 - 90%**

SAFETY

Red flag day for high winds, dry and hot weather. This is a heads-up day for extremely active fire behavior. Know your escape routes and safety zones at all times. **Always establish your LCES**

A MOMENT FOR SAFETY CAN LAST A LIFETIME.
