****RED FLAG WARNING - THROUGH 9 PM WEDNESDAY****

Discussion:

Another day of critical fire weather conditions with poor overnight recoveries and single-digit RHs in the afternoon. Winds remain elevated with local terrain features resulting in variable wind directions and speeds, especially in dense canopies. Temperatures will be HOT with highs today of 90 degrees at lower elevations and 70s at higher elevations. Overnight tonight, expect poor RH recoveries and nightly temperature inversions, keeping morning temperatures cooler and increasing areas of near-surface smoke.

TODAY:

	6,800' (ICP)	7,500'	9,500' (Magleby)
Sky/Weather	Critical Fire Weather Conditions Expected		
Max Temp	86-91°F	85-90°F	75-80°F

Chance of Lightning	20%	Chance of Wetting Rain	10%

OUTLOOK FOR THURSDAY THROUGH SATURDAY: Elevated fire weather continues through the weekend. Highs will range from the upper 60s above 9,000' to the upper 80s at ICP. During the afternoons, min RH values look to remain in the 20s across most areas. Previously mentioned late-week moisture is looking less likely. Wind gusts remain between 15-25 mph. There is a low chance (<25%) of dry lightning late week.

WEATHER

RED FLAG WARNING

SEE IMET FIRE WEATHER FORECAST

*Local Weather Thresholds that shout **WATCH OUT** Temperatures above 85°,
Relative Humidity below 20%, Eye level winds over 10 mph*

FUELS

Fuels remain critically dry and will not recover anytime soon. 1000-hr and 100-hr fuels will remain very receptive, will produce mass amounts of energy as they burn. Resistance to control will be high and an increased amount of effort will be needed to prevent fire spread through these fuels. Sage brush fuel types at lower elevations will carry fire under windy conditions.

Fuels Moistures at critical levels with 100-hour and 1000-hour dead fuel moistures below 10%.
ERC is near the 98th percentile.

FIRE BEHAVIOR

General Fire Behavior:

As the fire moves down into the valley, fuels change to mixed timber and brush fuel types. These brushy fuels are critically dry triggering fire behavior seen only during the driest and most severe fire seasons. Once again, the potential for extreme fire behavior exists. All receptive fuels will consume with high intensity. All spots will become active and show a high resistance to control. Peak fire behavior will start around 1200-1400 with the potential to burn all night in heavy fuels.

*Fine Dead Fuel Moisture: 3% unshaded, 5% shaded
Probability of Ignition 90-100%, Spotting 1/4 – 1/2 mile*

Specific Fire Behavior:

BRANCH I: Backing and flanking fire behavior up slope will continue in dry creek. Spotting to the across the ridges is possible with transport winds. The Dry Creek canyon has been drying for a few weeks now. Spotting from side to side will continue as it works down slope.

BRANCH II: Crown runs, spotting, wind driven runs and flanking fire behavior will be present again today as the fire continues to spread north and east with high intensity. All spots will have potential to become established. Brushy fuels are fully cured at lower elevations and will only contribute to fire spread and difficulty of containment. Bear Valley structures and infrastructure are likely to be impacted by today's activity.

BRANCH III: Patchy and unburned areas will continue to flare up and spot. Expect this to occur before 1400. Solar radiation will play a big role in this activity. Watch for clear skies and increased activity after 1200.

Night: New areas are now impacted due to the fire growth. Active fire behavior throughout the night can be expected with torching and spotting. Expect downslope runs with evening winds.

Safety

Watchout # 16: Getting frequent spot fires across line.
With fuels and weather conditions, spot fires will grow rapidly and show a high resistance to control.

MONROE CANYON FIRE WATER TENDERS AND ENGINES

Aquatic Invasive Species Decontamination Protocol for Demob

Water drafted from the Monroe Canyon fire is contaminated with Aquatic Invasive Species.

Decontamination will need to occur before demobing and going to another incident.

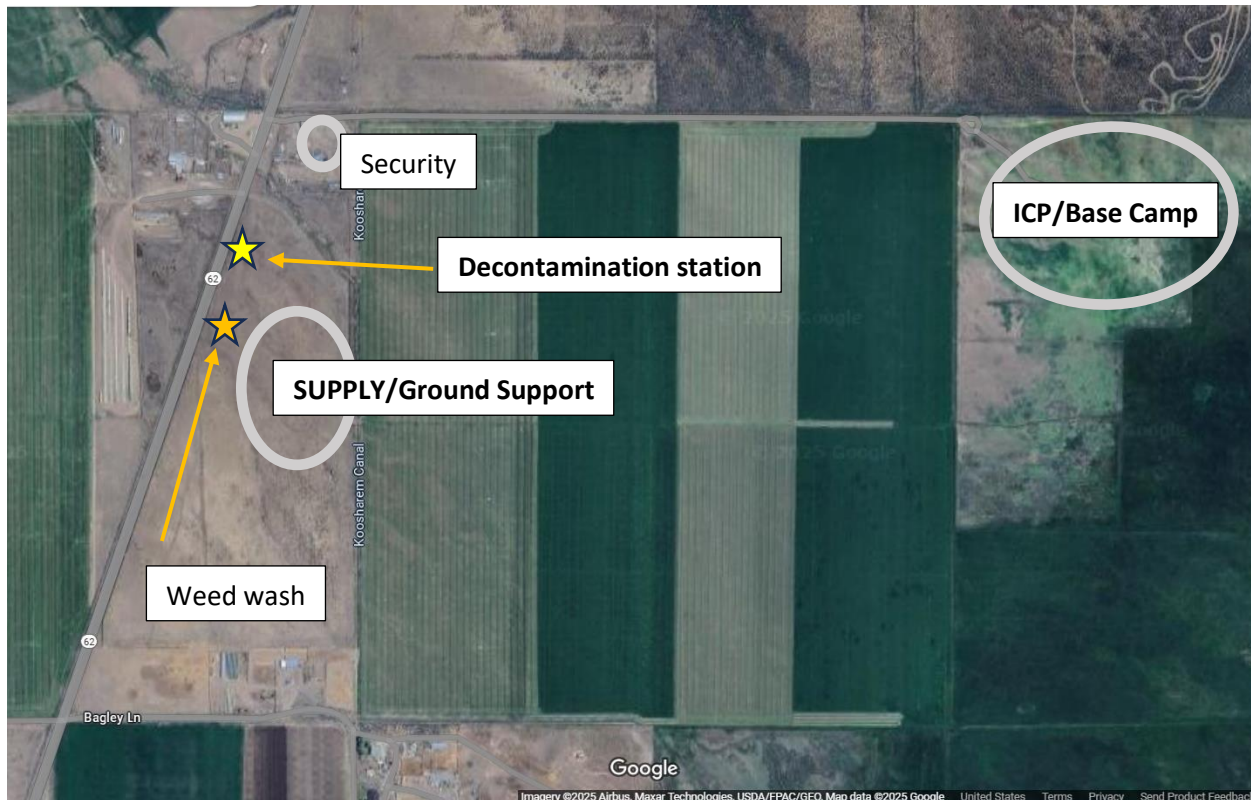

Location: the decontamination station is located at **SUPPLY/Ground Support** - west of Base Camp in Greenwich, UT (next to weed wash).

Hours of operation: 0700 – 2000

Resource Advisor Team contacts: Jens Swensen 435-253-1555 or Evando Vega 435-896-7657

Process:

1. Engines should arrive at the decontamination station empty (empty your tank in dry areas away from streams, canals, wetlands, lakes, reservoirs, etc.)
2. Draft disinfectant into engines and/or tenders. Soak foot valves in disinfectant tank
3. Wait 10 minutes for solution to kill aquatic invasive species
4. After 10 minutes the disinfectant can be released back into the disinfectant tank.
5. Draft rinse water into your tank with then dump it back into the rinse tanks. Do this three times to thoroughly rinse your tank. Soak your foot valves in rinse water.
6. Congratulations! You are now decontaminated. Staff will sign your demob checklist.
