****RED FLAG WARNING - UNTIL 10 PM SATURDAY****

Discussion:

A Red Flag Warning continues until Saturday due to gusty winds and low relative humidity. Poor overnight relative humidity recoveries will continue leading to afternoon minimum values below 10 percent. Winds will continue to gust from the southwest up to 25 mph through the afternoon. Expect any local inversions with good humidity recoveries to mix out by 0900 and stronger upper-level winds to mix down by 1200. Pyrocumulus clouds will develop over the fire due to the unstable atmosphere. There is a 10% chance of dry thunderstorm development after 1200 which could result in gusty and erratic outflow winds.

Relative Humidity below 20%, Eye level winds over 10 mph*

FUELS

Fuels transition from mixed conifer to brushy fuels that include gamble oak, mountain mahogany, and sagebrush as you move closer to the valley floor. These fuels are extremely dry and burn with high intensity. Additionally, 1000-hr and 100-hr fuels will remain very receptive, Resistance to control will be high and an increased amount of effort will be needed for containment.

Fuels Moistures at critical levels with 100-hour and 1000-hour dead fuel moistures below 10%.
ERC is near or above the 100th percentile. Setting historical maximums.

FIRE BEHAVIOR

General Fire Behavior:

Hot, dry, windy conditions are all elements for rapid fire growth. Under these fire weather conditions, this fire has been growing 5,000-10,000 acres per day. Continuous brushy fuels are critically dry, triggering fire behavior seen only during the driest and most severe fire seasons. All Peak fire behavior will start around 1200, be fully active by 1430 at the latest, and burn all night. Flame lengths in brush fuels will be over 20 feet with rapid rates of spread.

*Fine Dead Fuel Moisture: 3% unshaded, 5% shaded
Probability of Ignition 90-100%, Spotting 1/2 – 3/4 mile with wind gust*

Specific Fire Behavior:

BRANCH I: Wind driven fire behavior with spotting again. Fire burning in flashy fuels at the bottom of the slopes near Poverty Flats will burn with high rates of speed. Heavy equipment and aircraft are highly effective in this fuel type. The fire has a good chance of reaching Monroe Creek to the north. Firing will continue to be a challenge with another day of windy conditions.

BRANCH II: This area of the fire has generally denser fuels due to aspect. This will facilitate fire spread to the north with great intensity. The fire will continue to threaten Burville and Hwy 24. On the other end of the branch, the potential for impacts to structures around Long Flat will remain due to spotting and the potential for additional flare-ups.

BRANCH III: Heavy dead down will continue to be an issue. These fuels are at historic dryness levels. Resistance to containment will continue to be high. Watch for up slope fire behavior with spotting if the fire were to cross the North Fork of Box Creek in DIV Z. Other areas will see backing and flanking fire behavior as the fire continues to move downslope in brushy fuels.

Night: The fire has potential to be down amongst structures, road corridors, and other hazards found within the WUI. Be prepared for active fire behavior with spotting around structures at higher elevations, and moderate fire behavior at lower elevations around 0200.

Safety

There are multiple hazards within the WUI.
Watch for non-fire related hazards within your workspace.

General Remarks, Safety Notes, Hazards, Air Operations Special Equipment, etc. <i>Temporary Flight Restriction (TFR): Are used for multiple applications. TFRs are established over fires to protect both ground and air crews involved in firefighting operations as well as to prevent accidents caused by unauthorized aircraft. The purpose for TFR over a fire is to restrict airspace to ensure safe flying conditions. These restrictions create a buffer zone around active fires, preventing unauthorized aircraft (including drones and private planes) from entering the area and potentially interfering with firefighting efforts.</i>						Helibase Information			TFRFDC 5/6695			Medivac Helicopter Information Coordinate Medivac Helicopters through Monroe Canyon Communication

Medical Incident Report					
FOR A NON-EMERGENCY INCIDENT, WORK THROUGH CHAIN OF COMMAND TO REPORT AND TRANSPORT INJURED PERSONNEL AS NECESSARY. FOR A MEDICAL EMERGENCY: IDENTIFY ON SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM ICP COMMUNICATIONS.					
Use the following items to communicate situation to ICP COMMUNICATIONS.					
1. CONTACT ICP COMMUNICATIONS: (Verify correct frequency prior to starting report) <i>Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."</i>					
2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure. <i>Ex: "ICP Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."</i>					
Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° – 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>
