Discussion:

Poor overnight RH recoveries will once again lead to afternoon min RHs below 10 percent. Winds will be slightly lighter and out of the west, gusting up to 20 mph through the afternoon. Expect any local inversions with good humidity recoveries to mix out by 0900 and stronger upper-level winds to mix down by 1200. The atmosphere will be unstable today, so pyrocumulus clouds could develop through the afternoon with the right fuel conditions. There is a 10% chance of dry thunderstorm development after 1200, which could result in gusty and erratic outflow winds. A **Red Flag Warning** is in place for Monday and Tuesday for dry and windy conditions.

TODAY:

	6,800' (ICP)	7,500'	9,500' (Magleby)
Sky/Weather	Mostly Sunny (0-20%). Elevated Fire Weather Conditions		
Max Temp	83-88°F	83-88°F	70-75°F
Min RH	10-15%	8-10%	11-15%
Wind (20 ft)	W 8-10 mph, gusts 15 mph	Upslope/Upvalley until 1200, then W 10-15 mph, gusts 15-20 mph	
Chance of Lightning	10%	Chance of Wetting Rain	0%

TONIGHT:

	6,800' (ICP)	7,500'	9,500' (Magleby)
Sky/Weather	Mostly Clear with Poor RH Recoveries		
Min Temp	38-43°F	55-62°F	45-50°F
Max RH	40-50%	18-25%	35-40%
Wind (20 ft)	Light	Downslope/Downvalley 6-10 mph	Downslope/Downvalley 5-9 mph, gusts to 15
Inversion	1300' AGL after 2100		

MONDAY:

	6,800' (ICP)	7,500'	9,500' (Magleby)
Sky/Weather	Partly Cloudy (30-50%). ***Red Flag Warning***		
Max Temp	83-88°F	83-88°F	70-75°F
Min RH	10-15%	5-10%	11-15%
Wind (20 ft)	WSW 10-15 mph, gusts 25 mph	Upslope/Upvalley until 1200, then WSW 12-18 mph, gusts 25-35 mph	
Chance of Lightning	10%	Chance of Wetting Rain	0%

OUTLOOK FOR TUESDAY THROUGH THURSDAY: Elevated fire weather continues through early next week. Highs will range from the low-70s above 9,000' to near 90 at 6,500'. During the afternoons, min RH remains in the single digits to teens across most areas. Wind gusts slightly weaken, up to 20 mph, after Tuesday. There is a low chance (30%) of dry lightning as the atmosphere remains unstable through the forecast period.

WEATHER

SEE IMET FIRE WEATHER FORECAST

*Local Weather Thresholds that shout **WATCH OUT** Temperatures above 85°,
Relative Humidity below 20%, Eye level winds over 10 mph*

FUELS

Fuels transition from mixed conifer to brushy fuels that include conifer, gamble oak, mountain mahogany, and sagebrush as you move closer to the valley floor. These fuels are extremely dry and burn with high intensity. Resistance to control will be high and an increased amount of effort will be needed for containment.

Fuels Moistures at critical levels with 100-hour and 1000-hour dead fuel moistures below 10%.
ERC are above historical maximums.

FIRE BEHAVIOR

General Fire Behavior:

Hot, dry, windy conditions are all elements for rapid fire growth. Many of the fuels have low branches that serve as ladder fuels leading easily to torching and lofting of embers. Continuous brushy fuels are critically dry, triggering rapid rates of spread and exceptional flame length. Peak fire behavior will start around 1200, be fully active by 1430 at the latest, and burn all night. Flame lengths in brushy fuels will be 15 feet (greater during torching) with rapid rates of spread.

Severe Fire Danger Index – Very High

	Rate of Spread	Flame Length
V. High Load Dry Timber-Shrub TU5	8-12 ch/hr	7-11'
High Load Dry Shrub (large juniper) SH4	40-60 ch/hr	8-15'
Mod. Load Dry Grass Shrub (lower sage/juniper) GS2	18-25 ch/hr	5-9'

*Fine Dead Fuel Moisture: 3% ERC Over 98th Percentile Probability
of Ignition 90-100%, Spotting 1/2 – 3/4 mile with wind gusts*

Specific Fire Behavior:

BRANCH I: Wind driven fire behavior with spotting again. Fire burning in flashy fuels at the bottom of the slopes near Poverty Flats will burn with high rates of spread. Heavy equipment and aircraft are highly effective in this fuel type. The fire can back down slopes and set itself up for intense uphill runs.

BRANCH II: This area of the fire has generally denser fuels due to aspect. This will facilitate fire spread to the north with great intensity. The fire will continue to be active around Burrville and Hwy 24. On the other end of the branch, the potential for impacts to structures around Long Flat will remain due to spotting and the potential for additional flare-ups.

BRANCH III: Heavy dead and down will continue to be an issue. These fuels are at historic dryness levels. Resistance to containment will continue to be high. Watch for upslope fire behavior with spotting if the fire were to cross the North Fork of Box Creek in DIV Z. Other areas will see backing and flanking fire behavior as the fire continues to move downslope in brushy fuels.

Night: The fire has the potential to move closer to structures, road corridors, and other hazards within the WUI. Expect active fire behavior in heavy fuels with spotting near structures at higher elevations, and moderate fire activity at lower elevations. This will last until around 0200.

Safety

Alignment of slope and wind will easily create increased rates of spread and crowning. Watch for fire weakened trees in areas previously burned.

Incident: Monroe Canyon

Date: August 3-4

Shift: Day/Night

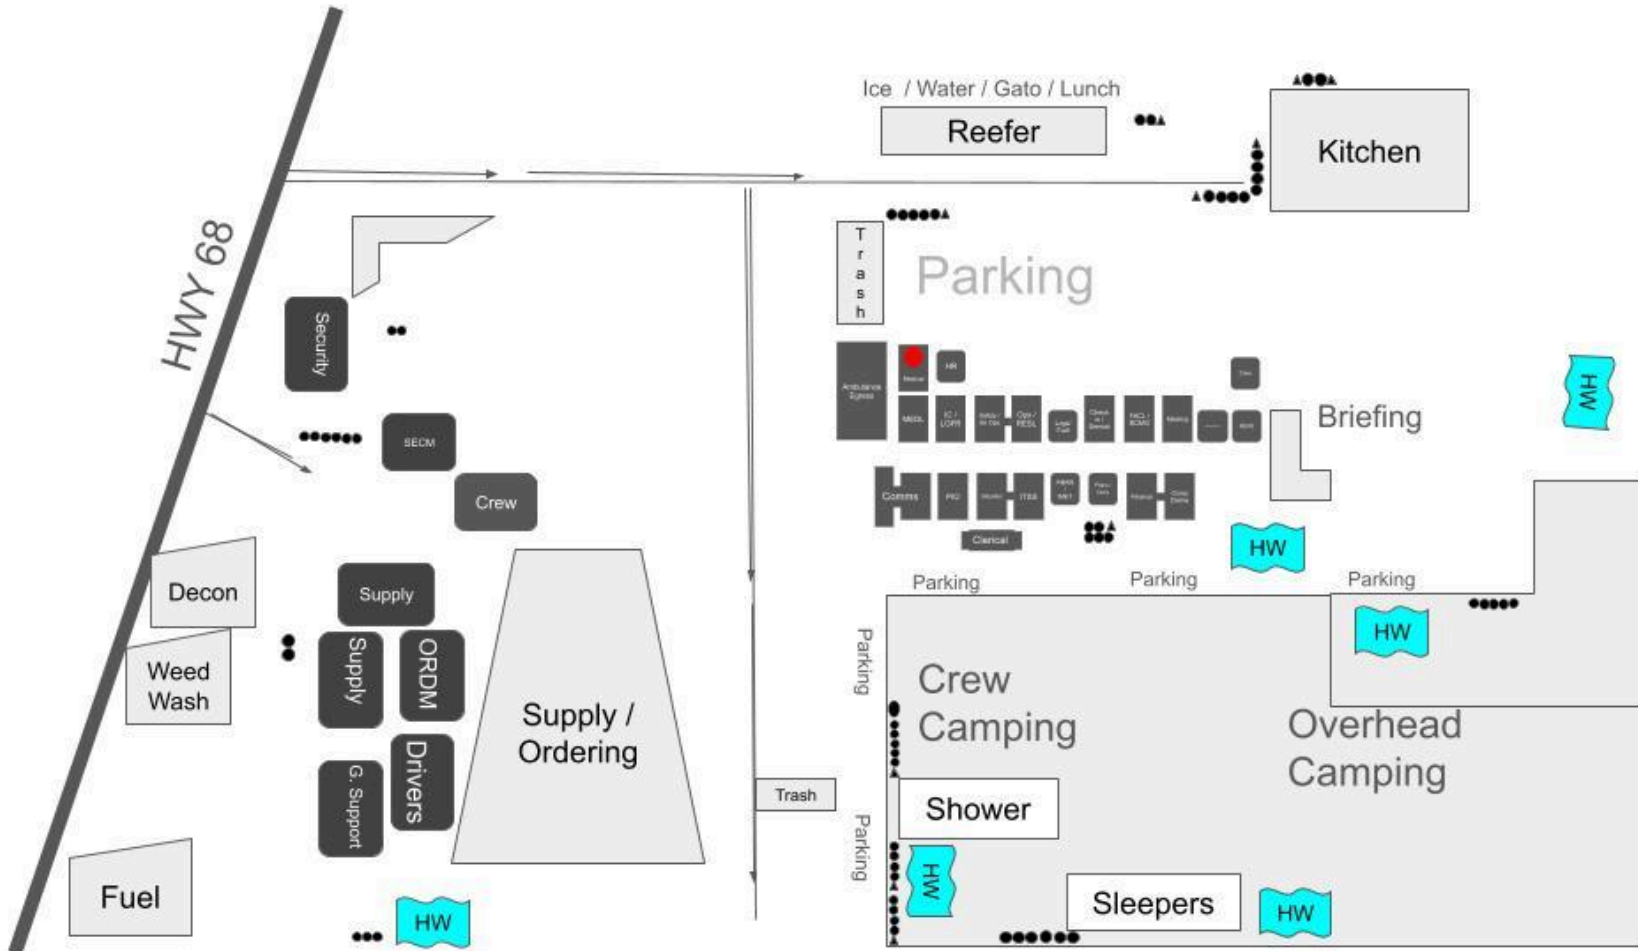

Exertional Heat Illness

✓ Risk Factors:

- Dehydration - Overall we do a good job at keeping hydrated, don't stop reinforcing hydration.
 - Electrolyte imbalance - Sustained consumption of >1-2 quarts/hour of water may cause this, so include Gatorade in the liquid replacement.
 - Heat retaining clothes - Can't really change this.
 - Hot weather, sun, low wind, and high humidity - Can't really change this either.
 - Sleep deprived - Yes, sleep is important. (P.S. So are showers!)
 - Heroic effort, 'never give up', 'warrior' mentality - Yes, this is a desired trait in our firefighters, but knowing when to cut back is also important.
 - High altitude - Can't do much about this as well.
 - Medications, herbs, supplements, energy drinks - Know what you are taking medication-wise and ask your doctor if there is an issue with heat. **Energy drinks** - yes, your Monster, 5 Hour Energy, etc., can cause a problem with your response to heat. It can raise your heart rate before starting work, as well as change your physiologic response to the heat - blood vessels don't respond appropriately, may not sweat as much as normal, and it may raise your base body temperature.
- ✓ Be cognizant of the people around you, know your crew. Watch for subtle signs; a little wobbly and no one else is, not responding as fast as normal, having to say/yell something twice, glass-eyed or distant look, just doesn't look right.
- ✓ On these hot days, try to find a way somewhere in the middle of the shift to take some time, 20-30 minutes, to rest or do a task that isn't as intense. Find a little shade, cool off a bit, let your bodies rest and recoup a little. Hopefully this will help mitigate potential heat illness problems.

Human Resource Message

Wildland firefighting can be described in a variety of ways: exciting, fun, challenging, glamorous, difficult, hot, demanding, and at times, lonely.

Let's talk about the lonely part. These long assignments away from our families are just as tough on them as they are on us. Phone calls and video chats are great, but they don't give your family anything lasting after you push the end button. That's if you even have cell service.

Welcome to the "Heartstrings to Home" campaign, brought to us by the Wildland Firefighter Foundation. You can stay connected to family and friends and give them something tangible to hold in their hands from you. They'll provide you everything that you will need to bring a smile to the face of someone who is missing you too.

Pick up a postcard from the PIO mail drop, or from your HRSP. Do your thing, address it, and drop it off. The cards will be collected daily and mailed. The postage will be covered too. These postcards will become a treasured keepsake for those that receive them.

Our hope is that this will help ease the burden of you being away, and most importantly, it lets the people you are sending the postcard to know that you are missing and thinking of them too.

MONROE CANYON FIRE WATER TENDERS AND ENGINES

Aquatic Invasive Species Decontamination Protocol for Demob

Water drafted from the Monroe Canyon fire is contaminated with Aquatic Invasive Species.

Decontamination will need to occur before demobing and going to another incident.

Location: the decontamination station is located at **SUPPLY/Ground Support** - west of Base Camp in Greenwich, UT (next to weed wash).

Hours of operation: 0700 – 2000

Resource Advisor Team contacts: Mark Dean 435-253-0978

Process:

1. Engines should arrive at the decontamination station empty (empty your tank in dry areas. away from streams, canals, wetlands, lakes, reservoirs, etc.).
2. Draft disinfectant into engines and/or tenders. Soak foot valves in disinfectant tank.
3. Wait 10 minutes for solution to kill aquatic invasive species.
4. After 10 minutes the disinfectant can be released back into the disinfectant tank.
5. Draft rinse water into your tank with then dump it back into the rinse tanks. Do this three times to thoroughly rinse your tank. Soak your foot valves in rinse water.
6. Congratulations! You are now decontaminated. Staff will sign your demob checklist.
