****RED FLAG WARNING - UNTIL 9 PM THURSDAY****

Discussion:

Low relative humidity and gusty winds will continue to support a Red Flag Warning for the fire through Thursday. The strong upper-level winds will mix down around 1200 and gust to 30 mph through the afternoon. The atmosphere will be unstable, leading to potential pyrocumulus clouds through the afternoon over any extreme fire behavior and heavy fuels. Partly cloudy skies will be the result of a high and thin cloud cover. Overnight, RHs recover between 20 to 40 percent across the incident. There is a small chance of thunderstorms on Wednesday, with gusty winds being the main threat.

TODAY:

	6,800' (ICP)	7,500'	9,500' (Magleby)
Sky/Weather	Partly Cloudy (30-50%)		
Max Temp	85-90°F	83-88°F	69-74°F
Min RH	10-15%	7-12%	8-15%

OUTLOOK FOR THURSDAY THROUGH SATURDAY: Elevated fire weather continues through the week. Highs will range from the low-70s above 9,000' to near 90 at 6,500'. During the afternoons, min RH will be 10 to 15 percent across most areas. Wind gusts slightly weaken, but still up to 25 mph. Saturday's winds turn northwesterly. There is a 10% chance of dry lightning as the atmosphere remains unstable through the forecast period.

Red Flag Warning in Effect Today

*Local Weather Thresholds that shout **WATCH OUT** Temperatures above 85°,
Relative Humidity below 20%, Eye level winds over 10 mph*

FUELS

Fuels transition from mixed conifer to brushy fuels that include conifer, gamble oak, mountain mahogany, and sagebrush as you move closer to the valley floor. These fuels are extremely dry and burn with extremely high intensity. Resistance to control will be high and an increased amount of effort will be needed for containment.

Fuels Moistures at critical levels with 100-hour and 1000-hour dead fuel moistures below 8%.
ERC are above historical maximums.

FIRE BEHAVIOR

General Fire Behavior:

Hot, dry, windy conditions are all elements for rapid fire growth. Many of the fuels have low branches that serve as ladder fuels leading easily to torching and lofting of embers. Continuous brushy fuels are critically dry, triggering rapid rates of spread and exceptional flame length. Peak fire behavior will start around 1200, be fully active by 1430 at the latest, and burn all night. Flame lengths in brushy fuels will be 15 feet (greater during torching) with rapid rates of spread.

Severe Fire Danger Index – Very High

	Rate of Spread	Flame Length
V. High Load Dry Timber-Shrub TU5	9-14 ch/hr	8-13'
High Load Dry Shrub (large juniper) SH4	30-50 ch/hr	7-12'
Mod. Load Dry Grass Shrub (lower sage/juniper) GS2	20-27 ch/hr	5-9'

Fine Dead Fuel Moisture: 3% ERC Over 99th Percentile

Probability of Ignition 90-100%, Spotting 1/3 – 1/2 mile with wind gust

Specific Fire Behavior:

BRANCH I: Wind driven fire behavior with spotting again. Fire burning in flashy fuels at the bottom of the slopes near Poverty Flats will burn with high rates of spread. Heavy equipment and aircraft are highly effective in this fuel type. The fire can back down slopes and set itself up for intense uphill runs.

BRANCH II: This area of the fire has generally denser fuels due to aspect. This will facilitate fire spread to the north with great intensity. The fire will continue to be active around Burrville and Hwy 24. On the other end of the branch, the potential for impacts to structures around Long Flat will remain due to spotting and the potential for additional flare-ups.

BRANCH III: Heavy dead and down will continue to be an issue. These fuels are at historic dryness levels. Resistance to containment will continue to be high. Watch for upslope fire behavior with spotting if the fire were to cross the North Fork of Box Creek in DIV Z. Other areas will see backing and flanking fire behavior as the fire continues to move downslope in brushy fuels.

Night: The fire has the potential to move closer to structures, road corridors, and other hazards within the WUI. Expect active fire behavior in heavy fuels with spotting near structures at higher elevations, and moderate fire activity at lower elevations. This will last until around 0200.

Safety

Watch for hot stump holes and fire weakened trees.
Post lookouts to keep an eye out for fire becoming established below.
