Resource Advisors Message - Fire Line Rehab Standards

- Pick up all flagging, litter, and trash and pack out to disposal site.
- If water-drafting activities disturbed stream banks reconstruct the bank edge to prevent erosion.
- Remove any dams or other obstructions in channels created for water drafting/pumping.
- Return fish screens (buckets) to Supply.

Handline Repair	Mechanical (Dozer) Line Rehab
<ul style="list-style-type: none"> • Recontour handline by pulling berm, duff, and soil onto line. Scatter slash, logs, limbs, pine bows or sage back over handline. • Backfill all cupped and trenched lines (including lines for hose lays and interior lines). Backfill with soil, duff, limbs, slash, etc. • Flush cut stumps to within 4 inches of the ground. Cover stumps with soil, ash, vegetation... • Scatter slash created during handline construction. Scatter back over rehabed handline. Do not scatter into creeks. • For handline in stream banks or wetlands, reconstruct the stream bank and pull back sod and vegetation. • Obscure handline that connects to existing trail/road routes to the extent possible. Utilize existing downed material (logs and limbs). 	<ul style="list-style-type: none"> • Recontour dozer line by pulling berm (soil, duff) onto the line, scatter sagebrush and small logs in a natural arrangement. • Remove fill that was placed within drainages, so that water flows unobstructed. A hand crew may be needed to re-establish the drainage channel. • Ensure proper drainage of waterbars. • Decompact line where designated by Resource Advisors. • Where possible, block the first 200 feet of the dozer line that ties into the existing roads and trails. Use existing native materials. • Where dozer line crosses and/or has damaged existing recreation trails, reconstruct trails to previous condition and width using hand crews to rebuild trails. A Forest trails specialist will direct all major work to repair trails. • Rebuild fence where it was removed to construct line. • Dozer line on steep slopes (>30%) or in riparian areas may require rehabilitation with hand crews. • Coordinate broadcast seeding of dozer line with a Resource Advisor.

- Water bars should slope at a 45 angle to the fire line to move water off the line to the down slope side. Always place a water bar at a slope change. Water bars can be made out of rock, logs, or drainage dips.
