Fire Weather Planning Forecast for Eastern Washington and North Idaho
National Weather Service Spokane WA

304 PM PDT Fri Sep 18 2020

.DISCUSSION...

...Smoke and haze causing poor air quality through Saturday morning...

...Gusty Cascade gap winds return tonight through Saturday...

Wildfire smoke and haze will persist across the Inland Northwest through Saturday morning. A frontal system will push into the region by Saturday with an increase the chance of showers and westerly winds. This should decrease the smoke over the fire districts from the Cascades into north Idaho. Isolated thunder will be possible with the weather system and gusty winds are possible Saturday afternoon and evening. Expected rainfall will be light initially tonight, then the chances for wetting rains increase by Saturday. Any moderate rainfall may impact any recent burn scars. Drier weather arrives on Sunday into early next week. Temperatures will be cool Sunday with a gradual warming trend through mid week. Another chance of showers is possible by mid week.

Forecasts for 20 foot wind speeds (valleys and ridge tops) are 10 minute averages reflecting RANS wind.

8. MEDICAL EMERGENCY PROCEDURES

Upon occurrence of a "Major Medical" or accident involving significant injury on the fire line, the closest DIVS should respond directly to the scene to take control of the situation and direct necessary actions. If the DIVS is unavailable, the nearest fire line supervisor or leader needs to take charge.

1. Clear all radio traffic on the Incident Command Channel--use to coordinate response with Coeur D' Alene Dispatch Communications via Command. Notify Coeur d' Alene Dispatch at the appropriate time with the information from the 8 line. **DO NOT USE NAMES.** Identify: a) The on-scene Point Of Contact (i.e. DIV, TFLD etc.); b) Describe the nature of the accident.
2. Obtain and facilitate nearest EMT to the scene. Identify to Communications medical personnel on site. Follow the 8 line in the IAP
3. Use Items 1-8 of the Incident Medical Report to communicate Situation to Couer D'alene Dispatch via Command. Report the situation to Operations and Safety.
4. Determine if the person can be transported by vehicle from their location or if they need to be packaged and carried out. If the patient cannot be moved make contact with Air Operations for a short haul out with Fire Resources. Notify Operations, Safety if this happens. The patient will be transported to an approved heli spot. If the short haul was used on scene resources will be in contact with the short haul ship on Air to ground for that Division. Medical transport will be determined by EMS in the field. The appropriate transport will be requested through CDA Dispatch via command. If used the short haul ship will then then be in contact with medical transport on EMS-2 and the ground contact.
5. Determine if the patients injuries are in need of air transport or ground transport. Ground will be used for transport to appropriate facility by protocol. If Air transport is needed for a more significant injury it will be to Kootenai Health or Sacret Heart to be determined by Life Flight.
