Comments /notes on tonight's mission and this interpretation: This is the first IR scan for this fire. There was no fire perimeter to begin mapping from. There were two distinct heat perimeter areas. The one furthest north was 136 acres with intense heat along the NE flank. The other heat perimeter was almost 2 miles SW on the other side of Boulder Creek and was 16 acres. The southern half of that perimeter was intense heat. I could not update the IR on NIFS due to ArcMap technical issues.
