27. Note any geospatial data available (indicate data format, content, and collection time information and labels):
ftp.wildfire.gov/incident_specific_data/n_rockies/2021_fires/2021_CharacterComplex
28. Observed Fire Behavior or Significant Events for the Time Period Reported (describe fire behavior using accepted terminology. For non-fire incidents, describe significant events related to the materials or other causal agents):
```
Moderate
Single Tree Torching
Backing
```

## Incident Status Summary (ICS-209)

## Incident: Character Complex

## Creeping

Narrative:
Precipitation from the previous days and a smoky atmosphere reduced fire behavior.
29. Primary Fuel Model, Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc):

## Timber (Grass and Understory) <br> Brush (2 feet) <br> Timber (Litter and Understory)

Narrative:
Fuel Models 2, 5, and 10: Fuel Model 10 is the dominant fuel type representing the majority of the fuel models occurring on both of the fires. Heavy dead and down material is the primary carrier of the fires. On south and southwest facing slopes brush and timber grass fuel models are the most common on the lower 1/3 of slopes.
30. Damage Assessment Information (summarize damage and/or restriction of use or availability to residential or commercial property, natural resources, critical infrastructure and key resources, etc):
Shoshone County Sheriff has authorized a Stage 2 (SET) warning for the Beaver Creek-Dobson Pass population zone. Shoshone County Sheriff authorized a road closure on both the Coeur d'Alene River Road and Old River Road from Steamboat to Babin's Junction effective July 26. The closure allows campers and residents in the Coeur d'Alene River and Beaver Creek zones egress out of the potential fire area.
Shoshone County Sheriff authorized a Stage 2 (SET) warning for residents and campers from Coal Creek to Prichard Creek effective July 19.

33. Life, Safety, and Health Status/Threat Remarks:

Smoke from this and other fires continues to affect Pine Creek nonattainment area (air quality concern).
35. Weather Concerns (synopsis of current and predicted weather; discuss related factors that may cause concern):
Expecting warming and drying to continue through mid week.
Another change in the weather is expected Thursday with a strong cold front bringing thunderstorms and cooler temperatures to the region.
Observed Weather: Sunny but smoky skies. Highs 90-94 with relative humidity falling into the 18-22 percent range. Winds southwest 3-6 mph with gusts to $\mathbf{1 0} \mathbf{~ m p h}$.
Forecast for Tonight: Clear. Lows 68-73. Relative humidity recovery 40-45 percent. Winds becoming downslope/downcanyon 2-5 mph after 2000.

36. Projected Incident Activity, Potential, Movement, Escalation, or Spread and influencing factors during the next operational period and in 12-, 24-, 48-, and 72-hour time frames:
12 hours:
Higher humidity will give way to drier air. Fire activity will increase, especially where fuels, slope and wind align. Humidity recoveries are forecast to be poor over night.
A warming and drying trend is likely to increase daily fire behavior. Fire will back down to the right of way corridor between Graham and Cinnabar creeks. Fire will back toward the old river
24 hours: road in the basin above the river between Cinnabar and Cedar creeks. Fire on the southeast corner will continue to flank and back towards the 933 road system. Fire on the southwest will check against control lines. Prichard will reduce in fire activity as the last of the heavy dead and down fuels finish burning out.
48 hours: A warming and drying trend is likely to increase daily fire behavior on the Deceitful fire. A cool and moist system has the potential to reduce fire behavior later this week. Recent
72 hours: forecasts have reduced the amount of available moisture. Windy conditions could increase fire behavior and subsequent fire growth, especially if precipitation misses the fire area.

A cool and moist system has the potential to reduce fire behavior later this week.
Recent forecasts have reduced the amount of available moisture. Windy
: conditions could increase fire behavior and subsequent fire growth, especially if precipitation misses the fire area.
37. Strategic Objectives (define planned end-state for incident):

# Incident Status Summary (ICS-209) 

## Incident: Character Complex

The Stateline Complex has a full suppression strategy that utilizes a mix of tactics (direct, indirect and point protection) when and where the probability of success is high and the risk is commensurate to the identified values.
38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:
12 hours: Threatening private lands, BPA Powerline, Avista Powerline and other infrastructure.
24 hours: Threatening private lands, BPA Powerline, Avista Powerline and other infrastructure.
48 hours: Threatening private lands, BPA Powerline, Avista Powerline and other infrastructure.
Threatening Private inholding, BPA Powerline, Avista Powerline, infrastructure, and corporate
72 hours: and state trust timber lands. Also the threat to numerous businesses and commercial building sides of the fire.
Anticipated after 72 hours: Same as in prior periods, plus possible impact on the I-90 corridor.
39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:

FDUL, COML, COST, ABRO, HEBM, HECM (trainee OK), ASGS to coordinate between both
complexes managed by the IMT. 1 DIVS, 2 TFLD, needed for increasing span of control. 2
12 hours: Falling Modules, 1 Type 4 Engine, 2 T2IA Crew, 2, T2 Crews, 1 T1 IHC, and a UAS with ignition
capability in support of burnout operations in division Alpha and division Kilo. Crews are critical
for ignition and holding of these two planned burnouts.
FDUL, COML, COST, ABRO, HEBM, HECM (trainee OK), ASGS to coordinate between both
complexes managed by the IMT. 1 DIVS, 2 TFLD, needed for increasing span of control. 2
24 hours: Falling Modules, 1 Type 4 Engine, 2 T2IA Crew, 2, T2 Crews, 1 T1 IHC, and a UAS with ignition
capability in support of burnout operations in division Alpha and division Kilo. Crews are critical
for ignition and holding of these two planned burnouts.
FDUL, COML, COST, ABRO, HEBM, HECM (trainee OK), ASGS to coordinate between both complexes managed by the IMT. 1 DIVS, 2 TFLD, needed for increasing span of control. 2
48 hours: Falling Modules, 1 Type 4 Engine, 2 T2IA Crew, 2, T2 Crews, 1 T1 IHC, and a UAS with ignition capability in support of burnout operations in division Alpha and division Kilo. Crews are critical for ignition and holding of these two planned burnouts.
FDUL, COML, COST, ABRO, HEBM, HECM (trainee OK), ASGS to coordinate between both complexes managed by the IMT. 1 DIVS, 2 TFLD, needed for increasing span of control. 2
72 hours: Falling Modules, 1 Type 4 Engine, 2 T2IA Crew, 2, T2 Crews, 1 T1 IHC, and a UAS with ignition capability in support of burnout operations in division Alpha and division Kilo. Crews are critical for ignition and holding of these two planned burnouts.

FDUL, COML, COST, ABRO, HEBM, HECM (trainee OK), ASGS to coordinate between both complexes managed by the IMT. 1 DIVS, 2 TFLD, needed for increasing span of control. 2 Falling Modules, 1 Type 4 Engine, 2 T2IA Crew, 2, T2 Crews, 1 T1 IHC, and a UAS with ignition capability in support of burnout operations in division Alpha and division Kilo. Crews are critical for ignition and holding of these two planned burnouts.
40. Strategic Discussion: Explain the relation of overall strategy, constraints, and current available information to:

1) critical resource needs identified above,
2) the Incident Action Plan and management objectives and targets,
3) anticipated results.

Explain major problems and concerns such as operational challenges, incident management problems, and social, political, economic, or environmental concerns or impacts.

## Incident Status Summary (ICS-209)

## Incident: Character Complex

Successful containment of both fires is highly dependent on having sufficient resources to implement burnout operations, complete fuel mitigation and contingency line preparation ahead of potential wind events on Thursday or new starts that further extend available resources. If we are unable to replace the crews that are timing out, we will have to consider shifting our strategy from containment to point protection.

The current position of the Deceitful fire with the forecast indicates continued fire movement to the north, east and south. Fire growth along the east and south flanks will continue due to indirect control lines and difficult terrain. Our ability to mitigate this threat, as well as implement two burnout operations (Div A and Div K), is dependent on the availability of T1 crews for the terrain involved. Fire will continue backing down toward the North Fork of the Coeur d'Alene River to the north. The replacement of the T2 crews will assist in holding and securing the fuel break in Division Alpha along the powerline access road.
41. Planned Actions for Next Operational Period:

Prichard Fire: Continue mop up, holding, and line improvement.
Deceitful Fire: Hold handline in the east fork of Graham Creek. Secure line from burnout progressing east/west of White Peak (between DP60 and DP70). Activate sprinklers as fire backs down towards Avista powerline.
42. Projected Final Incident Size/Area (use unit label - e.g., "Acres", "Square Miles"):
43. Anticipated Incident Containment or Completion Date: 11/01/2021
44. Projected Significant Resource Demobilization Start Date: 10/01/2021
45. Estimated Incident Costs to Date: $\mathbf{\$ 1 3 , 8 0 0 , 0 0 0} \mathbf{0 0}$
46. Projected Final Incident Cost Estimate:
47. Remarks (or continuation of any blocks above - list block number in notation):

NR Team 2 also manages the Stateline Complex.
