OUTPUTS

FIRE BEHAVIOR

GENERAL:

Fuels & Terrain: Open lodgepole pine with low shrubs and dry dead fuels have carried much of the fire to this point, with dead and down bug kill adding fuel to the mix. Mixed conifer with heavy understory shades surface and shrub fuels on north aspects. Heavy fuel loads below can kick off torching under hot conditions. Recent burn scars to the north and east of the fire have young lodgepole reproduction, shrubs and grasses. Grassy fuels and Ponderosa Pine needle litter along the Salmon River are dry and will burn..

Fuel Moistures: Fine dead fuel moisture 4-7%, driest without shading on west aspects. PIG 50 to 80% based on shading. Live fuels, especially in the shade under lodgepole and mixed conifer, continue to resist spread of surface fire. Bear grass is beginning to yellow, indicating that live fuels in the sun are stressed.

Fire Behavior: Litter with heavies burning is smoldering, creeping and backing with incremental movement noted in several locations. With warmer temperatures, there is increased potential for torching and spotting, especially where understory trees can send heat into the canopy.

Grasses and needle litter in the Salmon River canyon are supporting more active spread downslope and transitioning to upslope spread when fire crosses side drainages.

In old burn scars and regeneration, slow spread in dead and down fuels can produce some torching & short range spotting.

SPECIFIC:

Division Foxtrot/Papa (Dixie/Comstock): Fire has been spreading slowly on the ridge between Blowout and Comstock Creeks. With easterly winds reinforcing upslope/updrainage winds, anticipate more active spread than in past few days, with isolated torching and spotting possible. Stronger winds expected Saturday

Division Tango/Uniform (Jack Mtn and Mallard Ck): Aligned winds up the Noble and Big Mallard drainages could encourage fire across to the east face producing spread into more unburned fuel.

Division Charlie (Salmon River): Anticipate fire will continue to push fire down canyon in light fuels.

Jumbo Fire: East winds on Friday may kick off some new spread, but growth limited by rock and fire scars..

AIR OPERATIONS:

Sunset Thursday 2018; Sunrise Friday 0525. Early smoke haze over the area with some improvement in the afternoon. Isolated thunderstorms late in the afternoon.

SAFETY

Watchout # 14. *Weather gets hotter and drier.* With temperatures warming today and more of it expected tomorrow, fire behavior changes can be dramatic. Increased torching, spotting, and even crown fire is possible if accompanied by wind and slope alignments. ..

SAFETY MESSAGE

Dixie Fire

July 30, 2021

DEMOB:

You have been a very important part of accomplishment's done on this incident. Also, and more important you have been a member of this team. You continue to be part of this team until you get home or if you have been reassigned and arrive at the next incident. PLEASE drive like the professional firefighter that you are. Be courteous to others; obey traffic laws, regulations and policies; allow plenty of time to get to your destination...and be prepared for the unexpected!

Incident related driving is one of the leading causes of injuries and fatalities to firefighters. As you drive away from ICP, your thoughts understandably may drift to home, loved ones and a few days off.

- Remember Duty Day and driving limitations**
- Take breaks during driving - Share driving with others**
- Someone in the passenger seat should be awake with the driver at all times.**
- Your vehicle is "fit for duty" (fluids full, brakes and lights work, gear stored/secured, windows clear, mirrors adjusted**
