FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 2	INCIDENT TYPE: Wildfire
FIRE NAME: Leland Complex	OPERATIONAL PERIOD: July 20, 2021 0600-2000
DATE ISSUED: July 19, 2021	TIME ISSUED: 1900
UNIT: ID-PDS	PREPARED BY: Mike Bowden FBAN

INPUTS

WEATHER SUMMARY: See Fire Weather Forecast for specifics for Sand Mountain and Johnson Creek fires.
Sky/Weather: Partly Cloudy with a chance of slight chance of a showers

FUELS & FUEL MOISTURE: The fires are burning in all age and size classes of conifer fuels. Crown base height varies based on age. Surface fuel amounts increase with the age of the stands. Dead and down, logging and thinning slash will contribute to fire spread and intensity. Herbaceous and live woody fuels are green and will generally not actively burn. All dead fuels are very dry.

ERC: Above 97% 1000 Hour FM: 7% 100 Hour FM: 8%

OUTPUTS - FIRE BEHAVIOR

GENERAL:

Both fires are fuel and slope driven. Fire spread is occurring through the surface fuels, generally backing and flanking spread. When the fire gets in alignment with slope expect upslope movement with single and small group torching. Flame lengths will be 2 to 5 feet with slow rates of spread. Spotting from torching trees will be short range. The higher humidity forecast for the Johnson Creek fire will slightly increase fine dead fuel moisture and decrease intensity in areas devoid of dead and down fuels.

SPECIFIC:

Sand Mountain Fire:

DIVS A – The fire will continue to back and flank in the Duel Creek drainage area. The southeastern fingers will try to move upslope towards the dozer line along the ridge. Forward progression will be slow. The use of water drops should be effect to check up the fire in this area. The fire above DP 40 will continue to flank and back to the north until it reaches the younger timber stand.

DIVS M – The line of fire between H-20 and DIV M/A break will continue to move south slowly due to the limited fuels in this area. The Bonami Creek fire continues to hold heat but no growth is expected. Additional mopup is needed to secure this fire.

DIVS Z – West of the Division Z/A break, the fire will continue to flank and back down to Big Sand Creek Road. The rest of the Division, expect to find heat in areas that have not been mopped up.

Johnson Creek Fire:

NORTH: Expect the north edge of the fire to continue backing downslope towards Shite Creek. Rate of spread should be slow. Spotting through rolling burning debris may accelerate this downslope movement. Spots downslope will run back up slope towards the main fire.

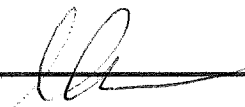

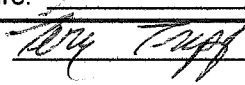

SOUTH: The fire has established itself south of Johnson Creek. Expect the fire to move upslope towards the dozer line with slow rates of spread and flame lengths of 2 to 3 feet. Flame lengths will be greater when the fire burns through jackpots of heavy fuel loadings. There is active fire approximately 200 yards directly below point 2. It is likely this could threaten the dozer line by the end of shift. Additional areas of fire south of Johnson Creek should be expected and they will could push upslope towards point 3.

AIR OPERATIONS: Smoke from the fires to the southwest will settle in the area negatively impacting any use of aircraft.

SAFETY: The ability to see the fire is extremely challenging. The use of lookouts on high points is critical to share information on fire behavior changes.

****Base all action on current and expected fire behavior****
