Leland Complex Fire Safety Message:

“A minute focused on safety can last a lifetime...”

For Day Operations: July 30, 2021

Heat Stress. Heat Cramps. Heat Exhaustion. Heatstroke... Heat-Related Injury (HRI).

More than likely, you've heard these terms or possibly experienced symptoms yourself?

At some point, we've all probably been on a hillside somewhere (listening to or) assisting with a medevac for a possible heat-related injury. If you've seen someone “go down” you are especially affiliated with the sense of surprise and panic that comes along with these sorts of injuries.

Each year crews discuss the signs and symptoms of HRIs and where you can find them in the IRPG, but let's take a tactical pause to learn about what it is and what we **know** can increase the risk of HRIs, as well as mitigations to reduce the risk.

A heat-related injury (HRI) includes:

Heat edema (retention of water, swelling)

Cramps

Syncope (fainting episodes)

Heat Exhaustion

Heat Stress

Heatstroke

Symptoms occur when heat produced through physical activity *or* heat acquisition from the environment become higher than the body's ability to dissipate that heat.

The following symptoms of an HRI may be difficult to recognize and could occur in any order (IRPG Pg. 109-110):

Profuse sweating with warm or cool, clammy skin leading to hot, dry skin

Muscle cramps and weakness

Dizziness, headache, and irritability

Rapid, weak pulse

Vomiting

Changes in mental status; as simple as not talking as much

Loss of consciousness

Thank you from your Safety Team!!

Jon Blackstone

Fire Weather Forecast

FORECAST NO: #11
PREDICTION FOR: Thursday
OPERATIONAL PERIOD: July 29 2021
FORECAST ISSUED: 7/28/2021 at 1700

INCIDENT: Leland Complex (Sand Mountain)
UNIT: Ponderosa Supervisory Area Office

Incident Meteorologist: Robert Rickey

Weather Discussion: Expect warmer and drier weather today. Highs will be in the upper-80s and minimum humidity will be around 20%. Ridgetop winds will generally be light, with terrain driven winds along slopes and in valleys. Light downslope winds are forecast overnight, but poor humidity recoveries will occur in the thermal belt above 3500 feet. Strong high pressure will cause near record warmth on Friday and Saturday. **Friday will be the most critical in terms of fire weather because it will feature hot temperatures, very low humidity and a Haines of 5.** Monsoon moisture will begin to move into the area on Saturday bringing increasing cloud cover and slightly higher humidity. *Heads up...additional monsoon moisture may bring showers and thunderstorms to the area on Sunday, along with increasing chances for wetting rainfall and significantly higher humidity.*

Continue constructing indirect fire line using hand and mechanized equipment along clipper line from Elk Butte Road towards the ridgeline south of Trestle Creek using existing and natural features to minimize risk of fire threatening to high value private timberlands to the east and northeast, and the Elk Butte Communication site to the east. Complete all preparation for burnout from Elk Butte Lookout along Windy Point Rd, to the clipper line on the ridge south of Trestle Creek. Ensure that prep is complete to provide protection to critical communications infrastructure prior to implementing burning. Determine needs to provide water support to the unit. Strategically secure the eastern flank of the fire.</p>

Fire Weather Forecast

FORECAST NO: #11
PREDICTION FOR: Thursday
OPERATIONAL PERIOD: July 29 2021
FORECAST ISSUED: 7/28/2021 at 1700

INCIDENT: Leland Complex (Johnson Creek)
UNIT: Ponderosa Supervisory Area Office

Robert Rickey
Incident Meteorologist: Robert Rickey

Weather Discussion: Expect warmer and drier weather today. Highs will be in the upper-80s and minimum humidity will be around 20%. Ridgetop winds will generally be light, with terrain driven winds along slopes and in valleys. Light downslope winds are forecast overnight, but poor humidity recoveries will occur in the thermal belt above 3500 feet. Strong high pressure will cause near record warmth on Friday and Saturday. **Friday will be the most critical in terms of fire weather because it will feature hot temperatures, very low humidity and a Haines of 5.** Monsoon moisture will begin to move into the area on Saturday bringing increasing cloud cover and slightly higher humidity. *Heads up...additional monsoon moisture may bring showers and thunderstorms to the area on Sunday, along with increasing chances for wetting rainfall and significantly higher humidity.*

FOR A NON-EMERGENCY INCIDENT, WORK THROUGH CHAIN OF COMMAND TO REPORT AND TRANSPORT INJURED PERSONNEL AS NECESSARY.

FOR A MEDICAL EMERGENCY: IDENTIFY ON SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.

Use the following items to communicate situation to communications/dispatch.

Ex: "Communications: Div. Alpha. Stand-by for Emergency Traffic."
- INCIDENT STATUS:** Provide incident summary (including number of patients) and command structure.
Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat/Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED/PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° - 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW/PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° - 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN/PRIORITY 3 Minor Injury or illness.
