Incident: Stateline Complex

Creeping

Narrative:

Fire behavior was moderated by recent precipitation. Warm and dry conditions will allow for an increase in fire behavior over the next few days.

29. Primary Fuel Model, Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc):

Closed Timber Litter Timber (Litter and Understory) Light Logging Slash

Narrative:

Vegetation types consists of sub-alpine fir in higher elevations with a transition down to pine, mixed conifer, and brush in lower elevations. Fuels consist of thick, continuous canopy cover with brush and heavy dead and down component. Previous fire footprints have heavy dead and down fuels. ERCs and 1000 FM are in 97th percentile.

- 36. Projected Incident Activity, Potential, Movement, Escalation, or Spread and influencing factors during the next operational period and in 12-, 24-, 48-, and 72-hour time frames:
- Precipitation and good RH recoveries have moderated fire behavior on all fires. Fire spread in sheltered, heavy dead/down fuels will continue to support growth.
- 24 hours: Fire behavior could increase again on all fires due to warm and dry conditions. Fire spread in heavy dead/down fuels will continue to support growth.
- 48 hours: Fire behavior could increase again on all fires due to warm and dry conditions. Fire spread in heavy dead/down fuels will continue to support growth.
- A drying trend is expected to dry fuels and cause increased fire spread. Activity will begin to 72 hours: increase and with full sun and reduced smoke shading. The fire area could see increased fire behavior.

Anticipated after 72 hours: Another cool and moist system could improve conditions later in the week.

37. Strategic Objectives (define planned end-state for incident):

The Stateline Complex has a full suppression strategy that utilizes a mix of tactics (direct, indirect and point protection) when and where the probability of success is high and the risk is commensurate to the identified values.

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:

Threats will be low to moderate for the following values: Natural resources including (Bull trout critical habitat, riparian areas and watershed values), Molpus Timber lands, Middle Sisters Peak 12 hours: Lookout, developed recreation sites, cultural resources, and Wild and Scenic River values.

Threats will be moderate to the Redd Bull and Smeagle Timber Sale Areas. Threats will exist from smoke impacts to the I-90 corridor as well as local communities within the fire area.

Incident: Stateline Complex

Threats will be moderate for the following values: Natural resources including (Bull trout critical habitat, riparian areas and watershed values), Molpus Timber lands, Middle Sisters Peak 24 hours: Lookout, developed recreation sites, cultural resources, and Wild and Scenic River values. Threats will be moderate to the Redd Bull and Smeagle Timber Sale Areas. Threats will exist from smoke impacts to the I-90 corridor as well as local communities within the fire area. Threats will be moderate to high for the following values: Natural resources including (Bull trout critical habitat, riparian areas and watershed values), Molpus Timber lands, Middle Sisters 48 hours: Peak Lookout, developed recreation sites, cultural resources, and Wild and Scenic River values. Threats will be moderate to the Redd Bull and Smeagle Timber Sale Areas. Threats will exist from smoke impacts to the I-90 corridor as well as local communities within the fire area. Threats will be moderate to high for the following values: Natural resources including (Bull trout critical habitat, riparian areas and watershed values), Molpus Timber lands, Middle Sisters Peak Lookout, developed recreation sites, cultural resources, and Wild and Scenic River values. 72 hours: Threats will be moderate to the Redd Bull and Smeagle Timber Sale Areas. Threats will exist from smoke impacts to the I-90 corridor as well as local communities within the fire area.

Threats will increase to the following communities: DeBorgia, Haugan, St. Regis and Superior. Threats will also increase for the following commercial timber

Anticipated after 72 hours: lands: Molpus Timber Management Lands and Hancock Forest Management.

Threats will continue to exist for natural resources, developed recreation sites, cultural resources and Wild and Scenic River values.

- 39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:
- 12 hours: 3 IHC crews, 2 T2IA crews, 2 T3 Engines.
- 24 hours: 3 IHC crews, 2 T2IA crews, 2 T3 Engines.
- 48 hours: 3 IHC crews, 2 T2IA crews, 2 T3 Engines.
- 72 hours: 3 IHC crews, 2 T2IA crews, 2 T3 Engines.

Anticipated after 72 hours: 3 IHC crews, 2 T2IA crews, 2 T3 Engines.

- 40. Strategic Discussion: Explain the relation of overall strategy, constraints, and current available information to:
- 1) critical resource needs identified above,
- 2) the Incident Action Plan and management objectives and targets,
- 3) anticipated results.

Explain major problems and concerns such as operational challenges, incident management problems, and social, political, economic, or environmental concerns or impacts.

Crews continue to reassess direct and indirect containment lines for the Tumbledown Fire and continue locating, assessing and prepping Forest Service infrastructure. On the remaining fires, crews will continue to monitor fire activity and where needed prep and construct direct and indirect line where highest probability of success exists. Crews are needed to finish containment of Dolly Creek fire.

41. Planned Actions for Next Operational Period:

Continue direct attack on Dolly Creek. Continue assessment of spot fires near private timber lands and forest boundary. Look for opportunities to go direct along Hwy 50 near Quartz Creek.

- 42. Projected Final Incident Size/Area (use unit label e.g., "Acres", "Square Miles"):
- 43. Anticipated Incident Containment or Completion Date: 10/31/2021
- 44. Projected Significant Resource Demobilization Start Date:
- 45. Estimated Incident Costs to Date: \$8,100,000.00
- 46. Projected Final Incident Cost Estimate:
- 47. Remarks (or continuation of any blocks above list block number in notation):

Incident: **Stateline Complex**

No reported growth on this 209 due to IR not being filled last night.

Southwest Area Incident Management Team 5 has transferred command of the incident to the Northern Rockies Incident Management Team 2.
