COVID-19 symptom Checker and Protocol

Possible Symptoms

COVID-19 can have a wide range of symptoms, ranging from mild symptoms to severe illness. Symptoms may appear 2-14 days after exposure to the virus. Anyone can have mild to severe symptoms **regardless of vaccination status**. Covid-19 symptoms may include:

- Fever or chills
- Cough
- Shortness of breath or difficulty breathing
- Fatigue
- Muscle or body aches
- Headache
- New loss of taste or smell
- Sore throat
- Congestion or runny nose
- Nausea or vomiting
- Diarrhea

This list does not include all possible symptoms. CDC will continue to update this list as we learn more about COVID-19. The unvaccinated, older adults and people who have severe underlying medical conditions like heart or lung disease or diabetes seem to be at higher risk for developing more serious complications from COVID-19 illness.

COVID-19 Protocol

Please wear a mask in all common areas off the Fireline

If any of the above symptoms are suspected, complete all steps:

1. Isolate the affected individual. Limit exposure to the other personnel.
2. Contact your immediate supervisor at the first indication of illness.
3. Then contact line supervisor, Task Force Leader, and/or Division Supervisor.
4. Inform the Medical Unit Leader (trainee) Aaron Ghysels (775) 240-6814.
5. You will be directed to Bonner General Hospital for testing.
6. Upon arrival, remain in your vehicle and wait for someone one to come out and administer the test.

An affected individual will be quarantined until the tests result is received.

Anyone else exposed to Covid-19 may also be quarantined until infection status can be determined.

Immediate supervisors, please conduct contact tracing to help limit the spread to other personnel.

Trestle Creek Complex Weather Forecast

Forecast Iteration: #7

Prediction For: 0600-0600 PDT (Sun – Mon)

Prediction Date: 08/22/2021 -08/23/2021

Forecast Issued: Saturday 08/21/2021 at 1900 PDT

Name of the Fire: Trestle Creek Complex

Unit: Idaho Panhandle National Forests

Incident Meteorologist: Lamont Bain

Signed: *Anthony Lamont Bain*

WEATHER DISCUSSION: ****Strong SW winds today and Monday**** SW sustained winds near 15 mph with gusts as great as 30-35 mph are forecast today. The strongest winds will be along the ridgelines and aligned terrain. Afternoon humidity will remain elevated with values generally greater than 50%. Winds will remain elevated tonight into Monday with overnight lows tumbling into the low 40s (some low 30s possible along the ridges). It will feel cold for those out at spike camps during the overnight hours with “feel like” or wind chill values in the low 30s. Peak wind gusts on Monday are expected to climb closer to 25 mph with elevated humidity recovery and in the afternoon.

TODAY: A shower or two, but low rain chances through the day. Partly to mostly cloudy and windy through the day.

High Temperatures: Valley/Drainages: 60-70° Mid-Slope (4000 FT): 54-59° Ridges (> 4500 FT): 52-57°
Minimum Relative Humidity: Valley/Drainages: 50-55% Mid-Slope (4000 FT): 55-60% Ridges (> 4500 FT): 55-60%

DIV A: SW winds of 9 to 12 mph with gusts as great as 15 mph during the morning hours. After noon (though sooner along the ridges in DIV A), winds will increase into the 12 to 16 mph with gusts closer to 25 mph, especially along the ridgeline.

DIV C: Strong SW winds are anticipated around sunrise with speeds ranging between 13 and 17 mph. Gusts to 25 mph are likely before noon. After noon, sustained wind speeds will hover within the 15 to 20 mph range with wind gusts as high as 30 mph expected. The highest ridges may see gusts to around 35 mph.

DIV W: Blustery SW winds will begin the period, especially at mid-slope and higher elevations. Sustained speeds will range between 5 and 10 mph with gusts as great as 15 mph. At or just after 1000 PDT, SW winds will increase into the 11 to 15 mph range with gusts increasing to near 20 mph. These SW winds will continue through the afternoon hours.

Stability: Inversion diminishing by 0900-1000 PDT. Modest instability with steepening low level temperature lapse rates.

CHANCE OF RAIN: 15% **LAL:** 1 **TRANSPORT WINDS:** SW winds at 15 to 25 mph.

TONIGHT: Elevated nocturnal breezes and chilly. It will feel cold with wind chill values falling into the low 30s at spike camp locations.

Low Temperatures: Valley/Drainages: 42-47° Mid-Slope (4000 FT): 39-45° Ridges (> 4500 FT): 39-43°
Relative Humidity Recovery: Valley/Drainages: 60-85% Mid-Slope (4000 FT): 65-75% Ridges (> 4500 FT): 65-75%

All DIV: Elevated nocturnal breezes are anticipated to persist into Monday morning. Speeds are generally expected to be between 5 and 10 mph with gusts in the 14 to 16 mph below mid-slope. Along the mid-slopes and along ridgelines, winds of 7 to 12 mph with gusts closer to 17 mph are forecast.

Stability: Weak inversion develops around 0400 PDT Monday morning.

CHANCE OF RAIN: 5% **LAL:** 1 **TRANSPORT WINDS:** Becoming WNW with speeds diminishing below 10 mph.

Extended Outlook (Monday through Wednesday):

After a chilly start to the morning hours, blustery conditions can be anticipated on Monday, though wind gusts will be closer to 25 mph. Winds will slowly subside through mid-week and will be primarily out of the SW in the afternoon. Tuesday will feature a slight wind shift to the NE but wind gusts will be under 15 mph. Partly cloudy skies are expected through Tuesday with a slight increase in cloud cover on Wednesday. The risk for rainfall is non-zero but is expected to remain below 15%. Overnight humidity recovery will continue to be excellent with values greater than 65%.

Please submit weather observations to Lamont Bain (IMET) at 580-583-9265 or email to Lamont.Bain@noaa.gov or use the QR code to the left. Weather observations can be found using the QR code to the right.

Fuels and Fire Behavior Advisory

Northern Rockies Geographic Area
Effective August 14, 2021 to August 27, 2021

Subject: The Northern Rockies Geographic Area continues to see a high level of fire activity. Record high temperatures, persistent low relative humidity, and record low fuel moistures are contributing to large fire growth and significant resistance to control. Above normal fire potential and ongoing activity will likely persist into September.

Discussion: Several factors beginning last fall are contributing to fire activity this summer. Drought conditions since September 2020 have stressed vegetation and reduced foliar moisture. Spring precipitation was significantly below normal with only a brief green-up of herbaceous fuels. Record high temperatures set up an early curing of live fuels at all elevations. Available fine fuels combined with dry, windy conditions, extremely low fuel moistures and ongoing drought has increased probability of ignition and elevated fire potential. Various locations in western Montana and northern Idaho received some rainfall during early August. This modest rainfall did little to affect heavier fuels, and ERCs are rising towards the 90th to 97th percentile quickly. Eastern Montana and North Dakota did not receive much rain and ERCs and 1,000-hour fuel moistures are setting record maximums. Aggressive to extreme fire behavior is likely, with fires burning actively through the night, spotting distances up to one mile, and complete consumption of heavy fuels.

Difference from normal conditions: ERCs have risen a month earlier than normal, setting new 10-year maximums in areas where there was no rain. ERCs are rising quickly where rainfall was limited. The combination of numerous fire starts in early July, and a historic heatwave followed by abundant lightning and windy conditions, resulted in NRCC's earliest ascent ever to PL5 on July 11. A continuation of hot, dry, and windy conditions is anticipated for the next month. In prior years, PL5 has lasted until early to mid-September in the Northern Rockies, suggesting many more weeks remain in this already busy season.

Area with some rain, still showing very dry heavy fuels

Concerns to Firefighters and the Public:

- Mop-up in 100 and 1000-hour fuels will be complicated by critically low dead fuel moistures making for resource intensive operations even on small fires.
- Fuels that are usually barriers such as aspen and high severity fire scars may burn actively and contribute to fire spread.
- Drought conditions and extremely dry fuels may contribute to plume dominated fire behavior and increased long-range spotting.
- Fires have been actively spreading during the night with downhill runs and torching.
- Live fuels are available and contributing to fire spread weeks earlier than normal.

Mitigation Measures:

- Fire managers should prepare to support more frequent fire occurrence and incidents of higher complexity and/or duration.
- Due to increased fire behavior employing indirect strategies and tactics may be necessary to protect firefighters.
- The season has the potential to be very long. Managers should be prepared to support suppression activity for a long period.
- Ensure all resources, local and from outside the area, are briefed on the potential for fire behavior to exceed previous norms.
- Increased spotting distance and availability of heavy fuels will necessitate more robust containment lines and additional patrols.

Area of Concern: Entire Northern Rockies Geographic Area is included.

ANNOUNCEMENTS

6. Division Branch Group Spike	
A	EMS Responders & Capability: EMPF Crownover (775) 251-8411
	Equipment Available on Scene: BLS, Trauma, Back Board, AED
	Medical Emergency Channel: Lunch Peak CH5 (Coeur d'Alene Dispatch)
	Air ETA to area: 20 Minute
	Ground ETA to DP27: 60 Minute
	Helispot: H5
	Latitude / Longitude 48° 20.177'N -116.17.999° W
	Primary Evacuation Route Air respond H5 (48° 20.117'N 116° 17.999W) Ground Trout Creek (FS232) (Approx. 45 mins)

TRESTLE CREEK COMPLEX FIRE MEDICAL PLAN

	Secondary Evacuation Route	Air: H8 (48° 19.754'N 116° 16.446W) Ground: Trout Creek (FS232) (Approx. 45 min)
Division Branch Group Spike		
C	EMS Responders & Capability:	EMPF Kosak (775) 848-7029
	Equipment Available on Scene:	BLS, Trauma, back board, AED
	Medical Emergency Channel:	Lunch Peak (Coeur d'Alene Dispatch)
	Air ETA to area:	10 Minute
	Ground ETA to area:	35 Minute
	Heli spot:	H2
	Latitude / Longitude	48° 22.554'N -116° 13.234W
	Primary Evacuation Route	Air respond to H2 (48° 22.554'N -116° 13.234W) H3 (48° 20.755'N -116° 13.555W) Ground- Trestle Creek Rd (Approx. 45 mins)
	Secondary Evacuation Route	Air: Respond to H2 (48° 22.554'N -116° 13.234W) H7 (48° 18.368'N -116° 15.023W) Ground: Lightning Creek Rd (Travel times vary/ approx. 45 min to 1.5 HR)
Division Branch Group Spike		
W	EMS Responders & Capability:	EMTF Touchstone (310) 944-0075
	Equipment Available On Scene:	ALS, Pain Management, Airway, back board, AED
	Medical Emergency Channel:	Lunch Peak (Coeur d'Alene Dispatch) Channel 5
	Air ETA to Area:	10 minutes
	Ground ETA to Area	35 Minutes
	Heli Spot:	H2
	Latitude / Longitude:	48° 22.554N -116°13.234
	Primary Evacuation Route:	Air: Respond to H2 (48° 22.554'N -116° 13.234W) Ground: Trestle Creek Rd. (Travel times vary/ approx.. 45 min)
	Secondary Evacuation Route	Air: Respond to H3 (48° 20.755'N -116° 13.555W) Ground: Lightning Creek Rd. (Travel times vary/ approx.. 45 min to 1.5 hr)

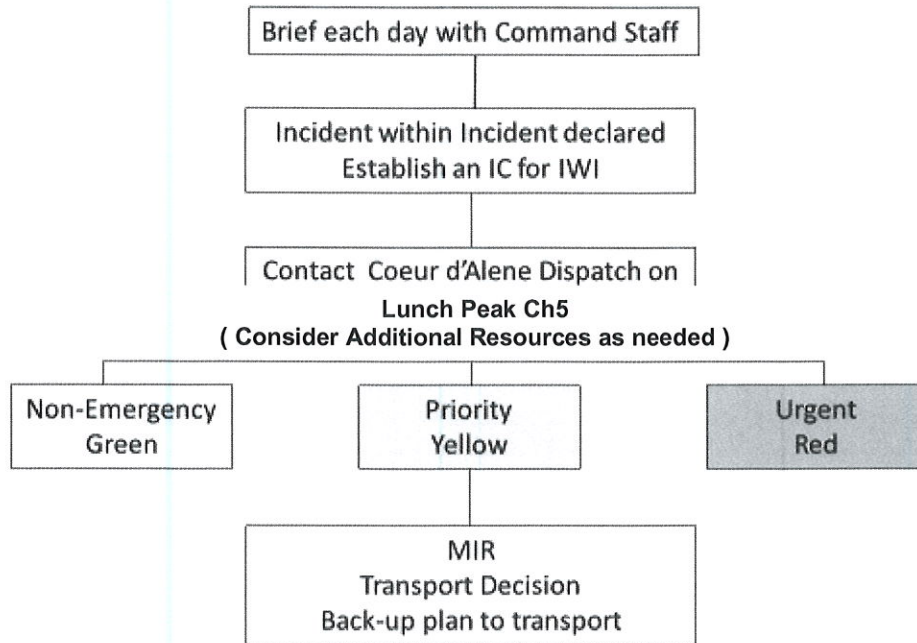

* EMPF Crownover (on foot) with Pennsylvania crew in Division W

* EMPF Kosak (on foot) with Fulton Hotshots in Division W

**Air/Ground Evacuation Sites will vary, to be determined by on scene medical and Division Supervisor personnel based on location and complexity of the incident.

TRESTLE CREEK COMPLEX FIRE MEDICAL PLAN

Medical Emergency Communication Procedures

1. Prepared By (Medical Unit Leader)	2. Date/Time	3. Reviewed by Safety Officer	4. Date/Time
Aaron Ghysels MEDL-T 775-240-6814	8/22/2021		

Medical Incident Report – 8 Line

FOR A NON-EMERGENCY INCIDENT, WORK THROUGH CHAIN OF COMMAND TO REPORT AND TRANSPORT INJURED PERSONNEL AS NECESSARY.

FOR A MEDICAL EMERGENCY: IDENTIFY ON SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.

Use the following items to communicate situation to communications/dispatch.

1. CONTACT COMMUNICATIONS / DISPATCH (Verify correct frequency prior to starting report)

Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."

2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure.

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical. IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° – 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>
Nature of Injury or Illness & Mechanism of Injury	Brief Summary of Injury or Illness <i>(Ex: Unconscious, Struck by Falling Tree)</i>
Transport Request	Air Ambulance / Short Haul/Hoist Ground Ambulance / Other
Patient Location	Descriptive Location & Lat. / Long. (WGS84)
Incident Name	Geographic Name + "Medical" <i>(Ex: Trout Meadow Medical)</i>
On-Scene Incident Commander	Name of on-scene IC of Incident within an Incident <i>(Ex: TFLD Jones)</i>
Patient Care	Name of Care Provider <i>(Ex: EMT Smith)</i>

3. INITIAL PATIENT ASSESSMENT: Complete this section for each patient as applicable (start with the most severe patient)

Patient Assessment:

See IRPG page 106

Treatment:

4. TRANSPORT PLAN:

Evacuation Location (if different): (Descriptive Location (drop point, intersection, etc.) or Lat. / Long.) Patient's ETA to Evacuation Location:

Helispot / Extraction Site Size and Hazards:

5. ADDITIONAL RESOURCES / EQUIPMENT NEEDS:

Example: Paramedic/EMT, Crews, Immobilization Devices, AED, Oxygen, Trauma Bag, IV/Fluid(s), Splints, Rope rescue, Wheeled litter, HAZMAT, Extrication

6. COMMUNICATIONS: Identify State Air/Ground EMS Frequencies and Hospital Contacts as applicable

Function	Channel Name/Number	Receive (RX)	Tone/NAC *	Transmit (TX)	Tone/NAC *
COMMAND					
AIR-TO-GRND					
TACTICAL					

7. CONTINGENCY: Considerations: If primary options fail, what actions can be implemented in conjunction with primary evacuation method? Be thinking ahead.

8. ADDITIONAL INFORMATION: Updates/Changes, etc.

REMEMBER: Confirm ETA's of resources ordered. Act according to your level of training. Be Alert. Keep Calm. Think Clearly. Act Decisively.
