Comments /notes on tonight's mission and this interpretation: I began interpretation with yesterday's IR perimeter. The georeferencing seems to be a bit wonky. There were some georeferencing issues that I corrected, but it also looks like that changed the shape of the perimeter. If it looks wider east to west today, that is why. The heat perimeter grew a small amount on the north side in the areas where the intense heat can be seen. The interior continues to cool off.
