<b>Comments / notes on tonight's mission and this interpretation:</b> There were three fires evident in this scan. One is Wallow, one is Wolf Creek and the scanner order indicated that Cold Springs should also be in the scan box. However, the NIFS location for Cold Springs was 1 mile east of the location of what is labeled as "Unknown" fire in my maps/data so I was uncertain if what I mapped was Cold Springs or a separate fire.  There was also three isolated potential heats outside of the main fire perimeters.
