FORECAST NO. 08

NAME OF INCIDENT: Sunset

FORECAST FOR: Tuesday Aug 26, 2025

UNIT: IDL-Pend Oreille

TIME AND DATE

FORECAST ISSUED: 1800 Mon Aug 25, 2025

SIGNED: Bob Hoenisch (406) 899-4112

Incident Meteorologist

WEATHER DISCUSSION:

Hot and dry weather persists across the area under the influence of an upper level ridge of high pressure extending north into the region from the Great Basin. In addition to near record afternoon temperatures for late August, poor overnight moisture recovery and low afternoon humidity, the atmosphere will become unstable Tuesday afternoon with scattered high cloud-cover and afternoon cumulus. General wind flow from the north to northeast prevails on ridgetops and near the lake with slope/terrain driven winds during the afternoon in drainages.

WEATHER: Partly cloudy with scattered high clouds and some afternoon cumulus.

MAX TEMPERATURES:

2000 FT: 92 – 97

4000 FT: 87– 92 (Up 1 - 2)

MINIMUM RELATIVE HUMIDITY:

2000 FT: 14 – 19%

4000 FT: 18 – 23% (Down 1 - 3%)

20 FOOT WINDS:

Slope/Lakeshore: North 4 - 8 mph, becoming upslope/up-drainage 3 - 5 mph in the terrain in the afternoon.

Ridgetop: North 5-10 mph. Gust to around 15 mph, mainly in the morning.

STABILITY: Morning inversion dissipates by 1100 with afternoon mixing to 11000 ft .

CHANCE OF WETTING RAIN: 0% **SMOKE TRANSPORT WIND:** Northeast 10-15 mph

TUESDAY NIGHT:

WEATHER: Partly cloudy

MINIMUM TEMPERATURE: 58-63. 67-72 mid-slope to ridges.

MAXIMUM RELATIVE HUMIDITY: 50-55%. 33-43% mid-slope to ridges .

20 FOOT WINDS: Northeast 4-8 mph along the lakeshore and over ridgetops with down-drainage winds in east-west oriented drainages.

STABILITY: Becoming stable after 2100.

CWR: 0%

WEDNESDAY:

Increasing clouds with an isolated thunderstorm possible late Wednesday afternoon or evening. Northeast winds 4-8 mph with gusts to 15 mph over ridgetops and areas along the lake, becoming east in the afternoon and southeast Wednesday evening. High temperatures in the upper 80s to low 90s with minimum relative humidity 17-25%. Gusty and erratic winds possible near isolated thunderstorms late Wednesday afternoon and evening.

OUTLOOK FOR THURSDAY THROUGH SATURDAY:

Moisture continues to circulate into the area Thursday for a greater risk of showers and thunderstorms, some of which may produce localized wetting rainfall. Temperatures moderate back to near seasonal norms Thursday through Saturday with improved overnight humidity recovery.

FIRE BEHAVIOR FORECAST	
FORECAST NUMBER: 9	TYPE OF FIRE: Wildland Fire
FIRE NAME: Sunset	OPERATIONAL PERIOD: Tuesday, Aug. 26
DATE ISSUED: August 25, 2025	TIME ISSUED: 1800
UNIT: ID-POS	SIGNED: Mike Pagoaga - FBAN
WEATHER	
*** SEE IMET FORECAST ***	
Local weather thresholds that shout WATCH OUT : Temperatures over 85, Relative Humidity below 20%, 1000-hr fuel moisture below 15%, Eye level winds over 10mph, 20 ft winds over 15 mph.	
FUELS	
The area comprises a mix of fuel models: TU5 (very high load, dry climate timber-shrub), TU2 (moderate load, humid climate timber-shrub), and SH2 (moderate load, dry climate shrub). Fuels are mid-way through their curing phase of growth and will provide little resistance to fire spread. Areas that are barren can still support fire spread due to the sparse dry fuels. Fire Danger Conditions = VERY HIGH 100-hr Fuels = 9% 1000-hr fuels = 12% Energy Release = 97% Burning Index = 87% 	
FIRE BEHAVIOR	
General Fire Behavior: Final days of the warming/drying trend. Peak fire danger conditions near historical maximums. Very little heat remains adjacent to the perimeter. Threats to containment will come from interior heat sources. Moderate fire behavior potential today due to general dryness and near record ERC. Burn period from 1000 – 2100. <i>Probability of Ignition 70-80% with full exposure</i> <i>Spotting up to .25 mile with wind gusts and full exposure</i>	
Specific Fire Behavior: DIV A: Interior smoldering and creeping will continue. Flare-ups can occur after 1400. Watch for short-range spotting around structures. DIV F/M: The remaining heat on this division lies in the Maiden Creek area. This will continue to persist through the hot, dry conditions. Surface fire spread through drying shrubs, unburned islands, or patchy burned areas combined with the occasional flare up could produce short-range spotting. DIV Z: Few remaining areas of heat exist and are isolated east of DP 160. This area will continue to be the primary source of activity as those fuels consume. Because of overall dryness and elevated conditions, mop up will be slow. DIV R: Heat will remain in Pearl Creek and No Name Creek until they are completely consumed or mopped up. High ERC will continue to facilitate moderate fire behavior and the potential for fire to escape current containment lines. Expect increased fire behavior around 1500. This is when Rh has been at the lowest.	
Safety	
We are entering the mop up phase of this fire. Don't become complacent after quiet days, fuels are still critically dry and fire potential remains high.

Sleep Deprivation

Sleep deprivation is cumulative and creates a "sleep debt" from which most individuals have difficulty recovering.

Indicators of sleep deprivation:

- You need an alarm clock to wake up.
- You struggle to get out of bed.
- You feel irritable, tired, and stressed during the day.
- You have trouble concentrating or remembering.
- You fall asleep in a warm room.
- You need a nap to get through the day.
- You feel drowsy while driving.
- You fall asleep within five minutes of going to bed.

Monitor yourself and your fatigue level. Take the breaks you need to function effectively. You will find that folks around you will like you better if you are not grumpy.

Fatigue

Fatigue management is the responsibility of every individual as well as every supervisor. It is not just the monitoring of hours worked but an assessment of a person's performance and ability during an event requiring long work shifts.

It has been determined that human performance deteriorated significantly after 12 hours of work. Long work shifts affect every individual differently, with significant facts being biological, social, and age. For example, an individual over 25 years old has less tolerance for sleep loss than someone younger.

The conclusion is that consecutive work shifts over 12 hours a day is a high-risk practice but can be mitigated with a variety of management practices such as split shifts, rotation of personnel, or frequent extended breaks.

Safety is your Responsibility!
