Comments / notes on tonight's mission and this interpretation: There was minimal heat perimeter growth since last period (9 acres), but some increased intense heat and also isolated heat outside the main fire perimeter. The intense heat was a band on the western flank of the western-most heat polygon. There was also some scattered and isolated heat on the interior of the heat perimeter but of particular note were the five spots of isolated heat up to a quarter mile from the northeastern main perimeter edge. These spots were at the following locations: <ol style="list-style-type: none"> 1. 114°35'45"W 47°17'35"N 2. 114°35'27"W 47°17'32"N 3. 114°35'9"W 47°17'6"N 4. 114°35'6"W 47°17'3"N 5. 114°35'3"W 47°17'1"N
