| Comments /notes on tonight's mission and this interpretation: Fire is located on ridge west of Selway River at its confluence with Bear Creek, south of Short Creek and north of Ditch Creek. Heat perimeter has grown to the northeast along the ridge between Selway River and Short Creek and down slope to the east. There are 2 new hot spots outside the heat perimeter and heat was detected in 2 of the older hot spots that were cool last IR flight. The second fire 4 miles SSW of Ditch on the north side of Goat Ridge has grown to 14 acres fire. No heat sources detected outside the perimeter. This second fire is displayed on a separate map and the acres are not included for Ditch. | | | |
