FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 48	INCIDENT TYPE: Wildfire
FIRE NAME: Meyers	OPERATIONAL PERIOD: Day 9/09/2017 Saturday
DATE ISSUED: September 8, 2017	TIME ISSUED: 1930 
UNIT: MT-BDF	PREPARED BY: Bruce Davenport, FBAN/Brenda Dale FBANt

INPUTS

RED FLAG WARNING

WEATHER SUMMARY: Sky Weather: Partly cloudy with a 30% chance of rain showers and thunderstorms in the afternoon. Temps: 73-78 RH: 24-28%

Winds: Ridges: Southwest winds 25 MPH with gusts up to 40 MPH. **Valleys:** Southwest winds 18-25 MPH
See the attached Fire Weather Forecast

FUELS:

Mixed conifer forest dominated by lodgepole pine, subalpine fir, Engelmann spruce, and Douglas-fir, with isolated pockets of whitebark pine on ridgetops.

- Beetle-killed lodgepole pine makes up 20-40% of forest canopy in the fire area.
- Heavy dead/down fuels from bug kill, and decadent forests are burning completely and holding fire on slopes and ridges.
- Valley bottom forests, wet meadows and drainages are greenish and will discourage surface fire spread. Live fuels on upper slopes continue to cure on all aspects.

Fine Fuels 4-8%; 100hr (1"-3") 6% unchanged; 1000hr (3"+) 7% unchanged; Forecast ERC at Teepee Pt RAWS: 82, above the 97th percentile which is a new record high for this time of year.

OUTPUTS - FIRE BEHAVIOR

GENERAL: All fuel types will carry fire. Expect crown runs, group torching and spotting distances may be as much as 1 mile with a probability of ignition of 70%.

- Timber in valleys will produce 8-12' FL (flame lengths) with ROS (rate of spread) up to ¼ mile/hour.
- Grass in valleys will produce 6-7' FL with ROS up to ½ mile/hour.
- Timber on exposed slopes will produce 10-15' FL with ROS up to 1 mile/hour.
- Grass on exposed slopes will produce ROS that exceeds walking speeds on slopes.
- Crown fires will produce significantly higher FL and ROS (factor of 3).

AIR OPERATIONS: Be cautious of isolated afternoon and evening thunderstorms. Communicate with ground resources if approaching thunderstorms moves across fire area.

SAFETY: Post lookouts, check communications, back off if you have doubts about your escape routes or safety zones or if the situation becomes too complex.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 30	TYPE OF FIRE: Wildfire
FIRE NAME: Sapphire Complex	OPERATIONAL PERIOD: Day 09/09/2017 Saturday
DATE ISSUED: 09/08/2017	TIME ISSUED: 1700
UNIT: MT-BDF	PREPARED BY: Tim Klukas FBAN <i>Tim Klukas</i>

INPUTS

WEATHER SUMMARY: Stronger winds over the area from the southwest. Evening winds predicted to increase producing a **RED FLAG WARNING** in effect 1400 to 2100 hrs.. Approaching thunderstorms with erratic winds. Partly cloudy with a slight chance of wetting rain.

Temps: 77 to 85°F **RH:** 19-30%. **Winds:** **Ridges:** SW 25 mph to 40 mph late afternoon. **Valleys:** Upslope early at 3 mph increasing and SW 18-22 mph. Evening 20-25 mph. southwest.

OUTPUTS – FIRE BEHAVIOR

GENERAL:

Today's forecasted winds are anticipated to be much higher early in the day. Evening thunderstorms may clear smoke out. The higher relative humidities will not decrease the potential for high rates of spread due to the drought state of the fuels. Fire activity on the north end and interior Beaver Creek area in Divisions N, and NW portion of Divn. Z in Little Hogback Creek will increase. Anticipate high wind speeds to generate more smokes closer to the perimeters.

Fire behavior outputs are calculated for maximum 20 foot winds of 25 to 40 mph as follows:

Spotting: .4 to .7 miles. **Flame lengths:** 3 to 5 ft. with surface spread. High fuel load timber 10 to 15 ft.

Grass and Sage: Ros 1 to 1.5 mi/hr. **Closed Timber Litter:** .1 to .2 mi/hr.

Closed Timber brush: .2 to .2 mi/hr. **Open timber and Grass:** 1 to 2 mi/hr.

SPECIFIC:

Goat Creek and Slide Rock Fires – Winds on south facing slopes will intensify. Interior pockets may generate pockets of heat increasing smokes that need to be monitored in down-wind receptor fuels.

Little Hogback Fire:

DIV N- Interior heat west of Beaver Dip site anticipated to grow and move north in old 2007 Fisher Fire. Heat in interior pockets should surface around the Beaver Fill area.

DIV O- Isolated interior heat may clean up some interior ridgeline pockets of unburned fuel.

DIV P- Pockets of heat expected to surface along Ram Mountain and Mill Gulch. Surface spread would be limited in interior pockets of unburned fuel. Any spots occurring outside control line could move over ½ mile to 1 mile an hour. Winds will channel and increase in valleys draining into Rock Creek.

Div Z- Unburned pockets of fuel in Capron, Sheep, and Windlass Gulches will be active earlier in the day due to wind alignment. Torching and surface fire flare ups may occur. Embers should be traveling cross slope or upslope into burned fuels. Erratic thunderstorm winds have potential to place embers in the Rock Creek drainage into receptive fine fuels.

AIR OPERATIONS: Gusts and erratic winds will impact aviation activities in the evening.

SAFETY: The wind speed ranges today are a significant change in the fire behavior environment. With eye level winds approaching 10 mph. anticipate rapid rates of spread and single to group torching to increase..

HEALTH AND SAFETY MESSAGE

"We don't plan on luck to be safe, we plan on sound risk management and good decisions"....the Red Team

INCIDENT: : Meyers-Sapphire Complex

DATE: Saturday, September 9, 2017

Major Hazards & Risks: Fire Behavior, Snags, Heavy Equipment, Communications,

Fire Behavior: With *Red Flag* conditions possible today, *elevated fire behavior* should be expected. We have had a lull in fire behavior with the heavy smoke inversions. Make sure LCES is in place before engaging in active fire and use **sound operational tactics**. *Don't become complacent.*

Snags: *Heads-up for snags, Moderate wind speeds can cause weakened snags to fall at any time.* Try to work away from the danger zone of potential falling snags. Flag or *remove snags only when it's necessary* in work areas to mitigate the hazards.

Heavy Equipment: There are many types and sizes of heavy equipment on the incident. Operators and equipment bosses should *be clear on mission assignments*. Know your travel routes, capacity and limitations, especially on bridges. *Stay clear of work areas.*

Communications: Make sure you have communication with all supporting resource. *Don't engage in fire activities unless* you have Lookouts-Communications-Escape Routes-Safety zones in place.

Four Major Common Denominators Of Fire Behavior on Tragedy Fires

- Relatively small fires/deceptively quiet areas on large fires
- In relatively light fuels, grass, brush
- Unexpected wind shift direction or speed
- Fire responds to topographic conditions

Red Team Safety Officers: Tony Rivers (T), Mike Cook, Larry Connell
