Comments /notes on tonight's mission and this interpretation:

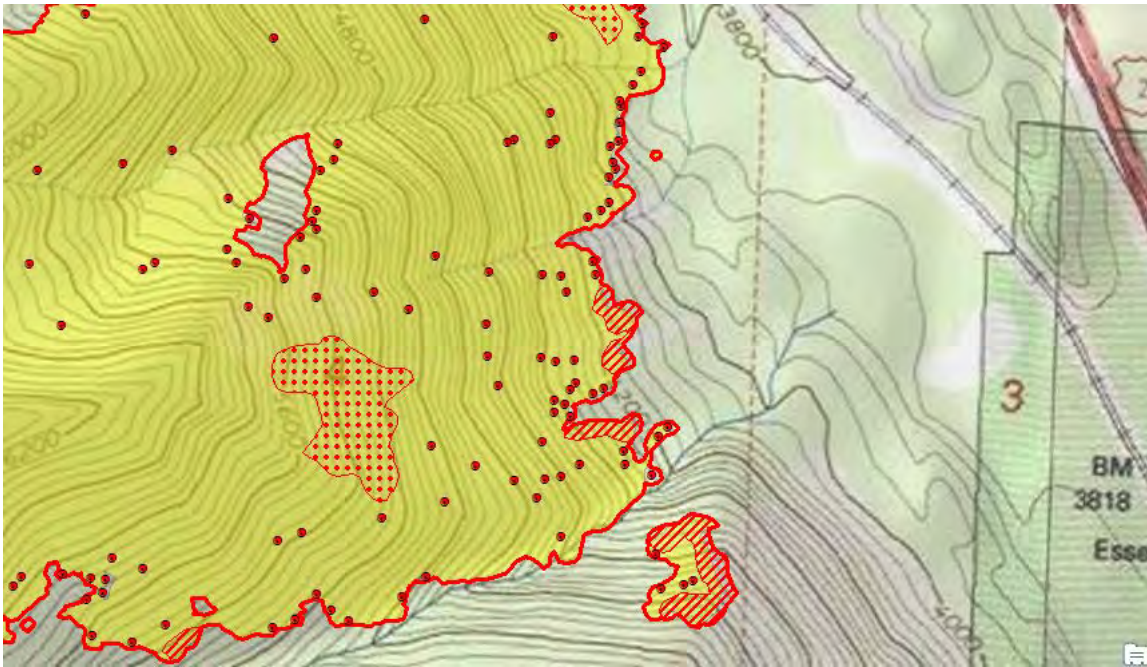

I started my interpretation from infra-red heat perimeter dated 08/29/2018 with a starting acreage of 744. New heat perimeter is 751 acres – Growth of 7 acres.

In the follow maps - Yellow is 8/29/2018's IR heat perimeter. Red line is current IR heat perimeter.

Small amount of growth on the north part of the fire in section 33 – just west of the Quarry.

Growth on the east / southeast side of the fire including growth in separate heat polygon in section 4.

A few isolated heat sources within the interior of the fire on the west half. Most activity was on the eastern half of the fire.
