

How to make a Fire Adapted Community

- Several bunches of Community Members
- Add a Fire Professional (or two)
- 1 part Public Education
- 2 parts Wildfire Mitigation
- A handful of CWPP's, Firewise or "Ready, Set, Go"- (or combination)
- Throw in a few Assorted Agreements and Partnerships
- Multiple parts of Personal Responsibility

In a wildland urban interface, add the community members and slowly mix in the fire professional and the public education. Then add the CWPP's, Firewise and "Ready, Set, Go" to the mix and stir thoroughly. Finally, fold in the Assorted Agreements and Partnerships and the personal responsibility.

Take out a small portion to serve as a starter for the next batch. The recipe will serve an entire community!

With the right
people and **tools**,
the **results** will be
communities
adapted to fire.
