Date and Time Imagery Received by Interpreter: 06/29/2024 01:15 PDT		Type of media for final product: Pdf maps, NIFS data update, geodatabase, shapefile, kmz, IR logfile Digital files sent to: https://ftp.wildfire.gov/public/incident_specific_data/pacific_nw/2024_Incidents_Washington/2024_Pioneer_WASES000173/IR	
Date and Time Products Delivered to Incident: 06/29/2024 0145 PDT: NIFS data 06/29/2024 0200 PDT: FTP products			
Comments /notes on tonight's mission and this interpretation: Started interpretation using the perimeter found in the event polygon on the NIFS (pulled 06/29/2024 0015 PDT) Intense heat identified on the southern end of the fire above Prince Creek, associated scattered heat also found in this area. Isolated heats identified within the fire perimeter on the upper part of the slope between Rattlesnake and Prince Creeks. Some scattered heat and a few isolated heats identified thru the cloud cover on the northern end of the fire. Much of the fire covered by cloud cover with only the clear area on the southern end of the fire.
