SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time.

MAJOR 215 A HAZARDS AND RISKS

- | | |
|--|---|
| <ul style="list-style-type: none"> • Wildland Urban Interface- be aware of hazards around the structures (fuel, vehicles, hornets...). • Dehydration and heat exhaustion- drink water and replenish electrolytes. Take breaks as needed. • Ticks- After each shift, check for ticks on yourself and equipment. Watch the video below on how to properly remove ticks. | <ul style="list-style-type: none"> • Mop up - avoid over extension and complacency. • Livestock and humans on the roads- use defensive driving techniques. • Driving a long commute from ICP to fire line on narrow, high-speed roads- use defensive driving techniques. |
|--|---|

Tick Safety: If the local dogs have ticks, we must assume the ticks are out there for us too. Here are a few things you should know.

Lyme disease is an infection that is transmitted through the bite of a tick infected with a bacterium called *Borrelia burgdorferi*. Ticks typically get the bacterium by biting infected animals, like deer and mice. Most people who get tick bites do not get Lyme disease. Not all ticks are infected, and the risk of contracting the disease increases the longer the tick is attached to the body.

Within one to four weeks of being bitten by an infected tick, most people will experience some symptoms of Lyme disease. A circular, expanding rash (called erythema migrans) at the site of the bite develops in about 70%-80% of cases. Some people report flu-like symptoms at this stage, including fever, chills, headaches, fatigue, swollen lymph nodes, joint pain, and muscle aches.
