Date and Time Imagery Delivered to Incident: 8-10-2015 @ 0218 (PDT)		Electronic file sent to: http://ftp.nifc.gov/incident_specific_data/pacific_nw/2015_Incidents_Oregon/2015_StoutsCreek/IR/20150810/	
Comments / notes on tonight's mission and this interpretation: The heat perimeter grew in both the Southeast and Northeast portions of the fire. There were no new isolated heat sources outside the heat perimeter. One of the previous isolated heat sources outside the heat perimeter on the South portion of the fire still had active heat within it. The North and South sides of the fire have the largest concentrations of intense heat. There are numerous isolated heat sources throughout the heat perimeter. The fire is located south of Milo and the South Umpqua River, east of Coon Creek, north of Diamond Rock, west of Callahan Meadows and 0.8 miles west of both Tiller and Drew.
