Comments / notes on tonight's mission and this interpretation: There has been 88-acre growth of the heat perimeter since the last IR flight. There is a 317-acres fire between the highway and the Western flank of the fire, these acres were not included in the interpreted size listed above. There are no isolated heat source outside the fire perimeter. There are newmerous isolated heat sources within the previous heat perimeter, with some concentrations of intense and scattered heat. There are isoalted heat sources near the heat periemter on the Southern side of the fire. The fire is staying East of the John Day River, North of Windy Point and South of Johnny Creek. On the West side, the fire is holding on Sunflower Flat.
