produces spots.

29. Primary Fuel Model, Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc):

Light Logging Slash

Timber (Litter and Understory)

Timber (Grass and Understory)

Narrative:

FM11 mimics heavy dead and down component with closed canopy. FMs TU5 and GS2 from LANDFIRE are being used for modeling.

30. Damage Assessment Information (summarize damage and/or restriction of use or availability to residential or commercial property, natural resources, critical infrastructure and key resources, etc):

There are structures and a residence on the isolated private property to the north and in the community of Cedar Creek. To the south, southeast and southwest are critical Seattle City Light, Bonneville Power Authority (BPA) and PUD transmission lines and fiber optic lines.

A. Structural Summary	B. # Threatened (up to 72 hrs)	C. # Damaged	D. # Destroyed

33. Life, Safety, and Health Status/Threat Remarks:

Currently fire is still on USFS, however, there is a minor threat that the fire may back toward private inholdings with some structures. ICT2 is working with local authorities for pre-planned evacuation procedures and contingency actions. For public safety, an area closure on USFS lands that includes roads and trails is in effect. Significant firefighter hazards include extensive snags, bug, drought and fire-weakened trees, steep terrain, limited safety zones, rolling debris and reburn potential. Deliberate Risk Analysis completed, updated and approved.

35. Weather Concerns (synopsis of current and predicted weather; discuss related factors that may cause concern):

Hot and dry weather continued over the fire today as temperatures climbed into the lower to middle 90°s with relative humidity values in the teens. A few light showers formed over northwest Washington, but none went over the fire. Thursday's weather will be a repeat performance with more hot temperatures and very dry relative humidity values. The hot and dry weather will likely come to an end late Thursday night or Friday as

36. Projected Incident Activity, Potential, Movement, Escalation, or Spread and influencing factors during the next operational period and in 12-, 24-, 48-, and 72-hour time frames:

12 hours:

Minor activity, minimal fire growth.

24 hours:

Forecasted hot and dry weather could produce consumption activity that may result in torching trees or spot fires.

48 hours:

Lightning expected.

72 hours:

Anticipated after 72 hours:

37. Strategic Objectives (define planned end-state for incident):

Where safely possible, direct and indirect suppression tactics are being employed to minimize fire duration and long-term firefighter exposure. Options that balance safety with a high probability of success reducing the risk of fire spread to private lands and residences. Containment and control efforts will protect from loss the Cedar Creek community watershed, PUD and BPA transmission lines, and other FERC infrastructure.

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:

12 hours

Threat of escaped fire due to open fireline, inaccessible terrain and lack of safety zones. Fire is burning in heavy down fuels.

24 hours: Threat of escaped fire due to open fireline, inaccessible terrain and lack of safety zones. Fire is burning in heavy down fuels.

High temperatures and thunderstorms may increase fire behavior and affect current control efforts.

48 hours: Threat of escaped fire due to open fireline and lack of safety zones. High temperatures and thunderstorms may increase fire behavior and affect current control efforts.

72 hours:

Threat of escaped fire due to open fire line and lack of safety zones.

Anticipated after 72 hours: Continued threat to control line until direct construction is completed on Divisions A and Q. Burnout operations are complete.

39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:

12 hours: None

24 hours:

None

48 hours:

None

72 hours: None

Anticipated after 72 hours:

Incident: BALDY

- 40. Strategic Discussion: Explain the relation of overall strategy, constraints, and current available information to:
- 1) critical resource needs identified above,
- 2) the Incident Action Plan and management objectives and targets,
- 3) anticipated results.

Explain major problems and concerns such as operational challenges, incident management problems, and social, political, economic, or environmental concerns or impacts.

Consistent support from the Type 1, Type 2 IA crews and aviation resources enhances our ability to maintain progress toward establishing anchor points, prepping lines and conducting burnout operations.

41. Planned Actions for Next Operational Period:

Continue to build direct line in Divisions A and Q utilizing 2 Type 1 Crews. Mop-up continues in Divisions A and Q.

- 42. Projected Final Incident Size/Area (use unit label e.g., "Acres", "Square Miles"): 600
- 43. Anticipated Incident Containment or Completion Date: 09/30/2015
- 44. Projected Significant Resource Demobilization Start Date: 08/15/2015
- 45. Estimated Incident Costs to Date: \$4,750,000.00
- 46. Projected Final Incident Cost Estimate: \$8,000,000.00
- 47. Remarks (or continuation of any blocks above list block number in notation):

49. Resources (summarize resources by category, kind, and/or type; show # of resources on top ½ of box, show # of personnel associated with resource on bottom ½ of box):
